4775. Removing Nicotine Smell f

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: dave.formilan@hobbs.com
Message-ID: <8C3B489.0029005F98.uuout@hobbs.com>
Source record: 221798

Does anyone have a proven way of successfully removing the nicotine
smell and/or stains from amateur radio equipment? Both inside and out.

There must be some general rules or guidelines for also removing that
smell from solid-state as well as tube-operated gear.

Any advice and recommendations are greatly appreciated.

73 Dave de KB2VNL

Change the first paragraph to "HF" propagation forecast versus "HP"...if
I'd ever learn to type, I'd be dangerous.

KC4NMK

4777. For Sale: Kenwood TM-251A...Connec-Tel Autopatch...Murch UT-2000A Tuner...Power Supply

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: kr4mt@pcc-uky.campus.mci.net
Message-ID: <4r9nsm$nmr@news.campus.mci.net>

I have the following items for sale:

KENWOOD TM251-A.....Includes manual, box, DTMF Microphone, bracket and power cord. It is in excellent shape. covers AM aircraft RX. 2 Meter TX/RX and 440 RX. Will cross band repeat 440 to 2 meters and will simplex repeat on 2 meters. has extended receive.

CONNEC-TEL (BASE) AUTOPATCH.....Includes Manuals and cable. Programmable for multiple ANI Codes and built in CTCSS Encoder/Decoder. No COR line needed. Very simple and straight forward. Like New

MURCH UT-2000A.....Roller inductor tuner....Looks new but I do not have any paperwork on it. Works very well...Must see to appreciate..

ASTRON RS-20A.....Has some scratches but works well, nowhere near new.....

Prices: TM251A--- $250.00 AUTO PATCH----$75.00
TUNER---125.00 POWER SUPPLY---- $30.00

Email me at kr4mt@pcc-uky.campus.mci.net or phone after 5:00 pm (606) 886-8680 ask for TIM 73'S

4779. NEW JULY HAM POLL QUESTION NOW ON-LINE>>http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-02 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0107961735440001@host50.cyberg8t.com>
Source record: 221837

The question for July 1996:

The ARRL has started a massive letter writing campaign. This campaign is directed at a proposaloffered by the "little LEO's", the low-earth orbiting satellite industry .Their proposal would have the FCC support a position at the International Radiocommunication Conference (WRC-97), that would
have amateur radio operations reallocated away from the 2 meter and 70 cm bands.If approved, these frequencies would be freed-up for use by the cellular phone industry.

The question I am asking this month is:

"Do you support the ARRL view that this proposal is a serious threat to Amateur Radio, and needs to be aggressively opposed?" If you believe this proposal is a significant threat to the future of ham radio, and should be dealt with aggressively, check (depending on your level of support) either "Strongly Agree or Agree". If, on-the-other-hand, you do not believe this proposal has the slightest chance of being approved and you therefore see the ARRL's response as extreme, check (depending on your level of disapproval) either "Strongly Disagree or Disagree". If you have not formulated an opinion on this issue yet check the "Not Sure" box.

Hi all,

I am hoping that somone and maybe anyone can help me with the above subject. I have come accross a mod guide as listed in this newsgroup from 1993 .

As it so happens I have come to a brick wall with my mods and am needing some help with it. I come to the "O2 off" instruction, only to find that all I can get is "O2 on" Also, would anyone know of a Workshop Manual for the FT-890.

I am from australia and have been wondering if the paticular problem that I am having is related to the fact that the powers that be, didnt want these mods made in the first place.

Anyways.... see you all later

Answering all that deserves an answer. If you insist on insulting folks, acting like a pompus ass, and being Bert's cheerleader you will get some heat from time to time. But living in Guam you understand heat.

I am looking for a window program that compiles network info.
I like to have the name of some of these programs. I tried to
modify a login program but was unsuccessful. The programs i'm looking
for need to have the presence of each amateur that comes to the
network and from where they come from and finally the number of
amateur.
73 and thank you in advance.

Yes. Through the end of 1994, they used "the previous several years" and computed a 7% growth rate of the U.S. and 7.5% for outside the U.S. But that also included the "bump" of people who held of getting licensed in advance of the new Tech license which produced very high growth rates for the next couple of years.

This is NOT true. Bill Gates and Craig McCaw were founding investors in a company called Teledesic. Teledesic is getting allocations at 28 GHZ for high speed satellite data access (digital voice, video, internet data, whatever - its all bits). They have no involvement that I am aware of in LOW earth orbit (LEO) satellites for 2-way short messaging of the type that the LEO providers wish to offer.

I am an employee of Microsoft Corporation and the above statements represent my personal opinion and are not necessarily those of my employer. Besides who else would ever accept credit for my silly opinions?

First off, Microsoft is not involved in Teledesic.Teledesic
is a private investment of Bill Gates. Bill Gates and Craig
McCaw were founding investors in a company called Teledesic.
Teledesic is getting allocations at 28 GHZ for high
speed satellite data access (digital voice, video, internet data,
whatever - its all bits). They have no involvement that I am
aware of in LOW earth orbit (LEO) satellites for 2-way short
messaging of the type that the LEO providers wish to offer. Microsoft
does not have a "private constellation of satellites". We write
software, remember?

Someone said that the Amateur Radio forum was kicked off MSN. I'm
not involved in MSN so I can only speculate. But realistically, what
does MSN add to Amateur Radio forums? There is plenty of chatter
here in the newsgroups and several hundred web sites devoted to the
web. Seems to me that in MSN's already announced intention to convert

to a web-based online service (whatever that means) they are probably disgarding a number of features that are handled better elsewhere on the web.

I am an employee of Microsoft Corporation and the above statements represent my personal opinion and are not necessarily those of my employer. Besides who else would ever accept credit for my silly opinions?

Let me respond to my own post by correcting the title:
Teledesic is NOT interested in Ham Radio Bands

There, that feels better.

4794. Teledesic is NOT interesting in Ham Radio Bands

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-03 00:00:00 UTC
From: vbook@vbook.com
Message-ID: <4rcg4o$7og@news.accessone.com>
Source record: 221709
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.amateur.misc

It is almost funny - one of the most accurate and reliable
sources of Amateur Radio information <satirical comment about
you know who!> - posts a note with comments about Kenwood
sales practices and Microsoft and the computer
industry allegedly trying to grab Amateur Radio bands -
and most everyone takes his word for it!

Even funnier is that information refuting most of these
claims is easily available right here on the Internet.
To refute allegations that Teledesic is
one of the LEO's trying to "take over" the Amateur bands,
I spent all of about 5 minutes using DEC's AltaVista search
engine. Here is some of what I found.

1. The Teledesic Press Release
You can read the original press release form Teledesic announcing
their plans for a "Big LEO" high speed data network based on
840 orbitting satellites. According to the story, cellular phone
pioneer Craig McCaw, and Microsoft founder Bill Gates, made founding
investments in Teledesic. In both cases, these investments were made
by the individuals and are not connected to either McCaw's cellular/SMR
properties nor Bill Gates' Microsoft Corporation. McCaw and Gates
made personal investments as founding investors in Teledesic.

You can read the press release:
http://www.att.com/press/0394/940321.pca.html

2. Teledesic is using frequencies at 19 GHz and 29 GHz.
Teledesic is a "Big LEO" operation, not a "Little LEO" - the
"Little LEO" companies are the ones who wish to consider use
of the Amateur allocations for their 2-way messaging systems.. You
can read about the frequencies that were allocated to Teledesic at:
http://techweb.cmp.com/techweb/cwi/current/155news1.html

3. FCC Documents
You can read at least one of the related FCC documents concerning
Big LEOs online at: http://www.fcc.gov/Bureaus/Wireless/Notices/fcc95287.txt

4. Bill Frezza's article comparing Big and Little LEOs
Bill Frezza is formerly a marketing manager at Ericsson; former
President of the Personal Computer and Communications Association;
and current wireless industry consultant and pundit, writing columns
for several publications. You can read his column on Teledesic at:
http://techweb.cmp.com/techweb/nc/615/615frezza.html

And now, shame on those of you who bought you-know-who's silliness hook, line and sinker and didn't bother to even make a modest effort to check his wild allegations.

Don't you just hate it when somebody comes along and spoils the fun with some actual facts?

Well Ken,

I have/had a bunch of DSP-9s and DSP-59s. Last year we were quoted $10 to upgrade the proms. One thing lead to another and the proms did not get ordered. In November they changed raised the price 300% when I tried to order the new proms I found this out. When Timewave was starting out they had a great attitude now they have a customer base and dealer network then heck with their early customers. The long and the short of it is a number of our Timewave units have been sold and been replaced with JPS equipment. I don't know about the 599 but I can't recommend the company.

It's funny that this thread should pop up now. In the new summer blockbuster "Independence Day," almost every major city and military base gets blown up by malevolent space aliens. The military forces of the Earth end up using CW because it's all they have left (no satellites, tons of RF interference, etc...). In fact, CW ends up saving the day. OOPS!! I said too much. Good flick, BTW. Well worth the $5.00.

THIS MAY INTEREST YOU OR A FRIEND

Commercial Radio Operator License Examinations:

Franklinton, NC - - 10 August 96 (Saturday) - - 11:00 a.m.
Franklinton Public Library
Corner of Mason St. and Hillsborough St.
(shares a parking lot with Police Station-Town Hall)

Licenses Attainable:

WARNING! At this exam session, we will be using NEWLY-ISSUED question
pools for elements 1, 3, 7, 8 & 9....and perhaps for elements 5 & 6.

Marine Radio Operator Permit - - Element 1
General Radiotelephone Operator - - Elements 1 & 3
GMDSS Radio Maintainer - - Elements 1, 3 & 9
GMDSS Radio Operator - - Elements 1 & 7
Ship Radar Endorsement - - Element 8
3rd Class Radiotelegraph Operator's Certificate--Elements 1, 5, T1 & T2
2nd Class Radiotelegraph Operator's Certificate--Elements 1, 5, 6, T1 & T2
1st Class Radiotelegraph Operator's Certificate--Elements 1, 5, 6, T3 & T4

NOTE: Exams will be held on the 2nd Saturday of EVEN-numbered months.

For more details, call:

Steve Modena AB4EL (919) 787-7618 ab4el@nando.net
or Terry Murphy AB4VJ (919) 494-2088

Dear Mr. Fisher,

In your permanent attempt to be a nuisance to everyone on these
news groups you also quote your MEOL account. Although you
have a commercial provider for your dirty work, you should
have a look at MEOL policies and the responsibilities of
teachers envolved therein:

---------------------------------------------------------------------

Mass Ed Online LearnNet Policies

PURPOSE
The purpose of the Mass Ed Online LearnNet is to advance and promote
education in Massachusetts It is intended to assist in the collaboration and
exchange of information among all who are concerned with education.

GOAL
The goal of the Mass Ed Online LearnNet is to promote innovation and
educational excellence for all learners in Massachusetts schools.
To achieve this goal, the network must provide high quality information
and communication resources to the educational community in an equitable,
cost-effective manner, while promoting a safe and secure environment for
use of the network and respect for the individual rights of all users.

USERS
Primary users of the Mass Ed Online LearnNet are teachers, administrators,
and other educators. MCET may permit others to use the network,
provided they demonstrate that this use furthers the purpose and
goals of the network and public education in general.

POLICIES
The use of the Mass Ed Online LearnNet is a privilege. The user is
responsible for what he/she says and does in the online community.
Because communication with thousands of others is so quick and easy,
it is important always to think before speaking and to show respect
for other people and for their ideas.
```

It is beneficial for all users to keep the network running efficiently.
Each user must take responsibility for keeping down costs and avoiding
system disruption.
(See "http://meol.mass.edu/training/netiquette.html" Netiquette and
Strategies for efficient use).

.....and so on.

>knoll003@gold.tc.umn.edu

Henry,
I think we just had a similar request for information about generators a while back, but I don't remember who it was from so I can't direct you to him.
I have had numerous generators here, as our power company is not very reliable. Honda is by far the best. The Honda I have has been running for years with only oil changes and gas tank fills. Coleman makes a few generators, and they are very common here (I have one now) but they are problematic. Mine has had an oil leak around the crankshaft in the motor since new. Everyone I know who sells Coleman gets a bunch back for repair. I also had a Homelite (5K) at one time that worked, but was a gas hog and VERY noisy.
If you are interested in something you can run and not have to be fixing constantly, the only thing I would recommend would be Honda.

Excelent example of all my points; pompus, self indulgent, filled with personal insults rather than substance. You have made my point about your posts far more elequently than I could have I bow to your superior wordsmithing.

The personal insults you email to me must be bouncing off my rock sorry. I guess if you want to make insulting personal attacks it will have to be in public where all can see what a pompus, self indulgent twit you really are. But, like everything else, you knew all this. Please don't bother to mail me copies of your replies I'll see them in the newsgroups when and if I have time and/or inclination.

Jerry

Agreed Burt. It's really very simple: Don't create any Peal Harbors
and we won't create any Hiroshimas or Nagasakis.

As far as Dresden or Hamburg goes, lets talk about Rotterdam, Warsaw,
London, etc. etc.

And we haven't even started to talk about theo holocaust.....

4812. Grow up and use this newsgroup for ham radio before it's too late

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-03 00:00:00 UTC
From: 72527.01012@compuserve.com
Message-ID: <4re3a4$r9a@dub-news-svc-5.compuserve.com>
Source record: 221727

Come on guys! (and girls) This newsgroup is for the discussion of ham radio news, equipment and related topics. There is actually very little useful information that passes through this newsgroup. Most of the posts are nasty, rude and deal with everything except amateur radio.

Somebody asks a simple question and instead of getting an intelligent answer, they get blasted for their spelling mistakes, or the way the question was phrased, or how wrong they were to ask the question, or scolded for having a no-code tech license and insulted for not knowing Morse code. I think it is time to grow up and put all of the fighting and bickering aside. Let's try to ignore the rabble-rousers whos' sole purpose is to flame everybody and keep the fights going. If you do not give these people attention, they will go away. Telling them to go away will only make them more stubborn!

We are in more danger than ever of getting our bands taken from us. We defend ourselves by telling those responsible about how great ham radio is, and how it is needed in the event of an emergency. Well, all they have to do is take one look at this newsgroup and they might convince themselves that hams are useless and nothing more than a bunch of fighting cry babys!

Would any of you be proud to show this newsgroup to the "Little LEO" people as part of our defending their attempts to get our frequency space? I don't think so! Although amateur radio is actually a very prestigious hobby, a lot of the posts to this newsgroup show otherwise. The Internet is getting larger at a rate beyond everybody's expectations, and this newsgroup represents amateur radio. I would like to see more people making posts that represent our knowledge, history, importance to technology and dedication to public service instead of embassassing us in front of the whole world!

KH2D's PIP (Personal Internet Pinhead), kc5egg@ix.netcom.com(Gerald Schmitt), Out from under the rock again, wrote:

>You have made my point about your posts far more elequently than I could have

And as long as you keep popping out from under your rock, I will continue to do so. Most everyone who writes here writes far more elequenty than you do. The only point I have seen you demonstrate so far is the one on the top of your head. But it amuses me to have my own self nominated Personal Internet Pinhead, so stick around and keep it up until it affects your blood pressure and your doctor advises you to quit.

The purpose of this exercise is now to teach you that you can't just pop out from under your rock, sling a few nasty remarks at someone, and then slide back under your rock without allowing the slingee to defend himself. Hopefully, it will teach you that when you write rude comments about someone else, you should expect some rude comments in return. This game is not new to you Jerry, you have played it with other people long before you started playing it with me. Last round was with Jeff and his 'illegal' callsign, remember ?

>The personal insults you email to me must be bouncing off my rock

Don't flatter yourself. I have better things to do than email you anything. I just copy replies to you that I post in this newsgroup with the thought that someone who is a mouthy as you are would want to see the results of his work, and the hope that you are endowed with enuff cookies to back up your mouth, which you obviously are not.

>I guess if you want to make insulting personal attacks it will
>have to be in public where all can see

I don't want to Jerry, YOU do. YOU started this exercise, sport, I didn't. YOU didn't like something I wrote, so YOU popped out with a few one liners about your views on my character. First time, I ignored it. Second time, I responded, and you failed to reply. And then I switched to your game, which apparantly you don't like too much when two people are playing. It's a fun game when you can spout off at the mouth and not get anything back, right Jerry ?
It's been 'in public' this far, so it's fine with me to keep it that way. When you get tired of it, you have my permission to stop.
If I get lonely, I will let you know.

>Please don't bother to mail me copies of your replies I'll see them in
>the newsgroups when and if I have time and/or inclination.

It's no bother. Just takes one click of the mouse on my computer. First you say 'the personal insults I email to you' aren't getting there, and then you ask me to stop emailing you. I think what you should have said was 'Please don't respond to my smart remarks because I am not capable of replying.' Which is it Jerry, are you getting your email or aren't you ?

Please don't bother to post your trivial remarks, and I won't have to bother responding to them and emailing you copies. If you want to play your game, you better look around and see if you can find someone else who won't sling anything back. If you thought you could sling your crap at me and not get anything in return, you were sadly mistaken, and the longer you keep it up, the sader I can guarantee you will be. The purpose of this newsgroup is as a forum for discussion. It's not a forum where you get to decide whos character you don't like and then post your dislikes and disappear. If you have anything to add to a discussion, add it. If anyone wants your opinion about their character, I'm sure they will ask you for it.

I know I have promised you that I wouldn't write any more long posting to you, but since your writing abilities seemed to have graduated from one liners to paragraphs, I am hoping your reading abilities are following. This may be too much for you to comprehend in one pop out from under your rock, so before you jump in with both feet and start typing, I'd suggest you print it out and take it back under the rock with you and read it over a few times and think about it. Thats why I split it up into paragraphs (groups of sentences) so you could think about it a little bit at a time.

And remember Jerry, it's your game. You started it, so you can finish it. At this point, I'm afraid, you can't quit while you are ahead, but you can still quit while you are a pinhead. Things are never as bad as they seem and they can always get worse.

Looking forward to your next posting. Tell me about your Uncle. Have a nice day.

73, Jim KH2D

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 03/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 JULY AND FORECAST FOR 04 JULY - 06 JULY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 69/3

GOES satellite data for 02 Jul
Daily Proton Fluence >1 MeV: 1.9E+05
Daily Proton Fluence >10 MeV: 1.7E+04
Daily Electron Fluence >2 MeV: 9.1E+04 (normal)
X-ray background: A1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Jul 05 Jul 06 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Jul: 70/5

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 02 Jul
Learmonth 11 3333 2222
Fredericksburg 10 10
Planetary 8 7

Observed Kp for 02 Jul: 3211 1222

2B. MAGNETIC FORECAST
Date Ap Conditions
04 Jul 14 Quiet to unsettled
05 Jul 8 Quiet
06 Jul 8 Quiet
COMMENT: Field had mildly disturb character for first half of
UT day on 3 July.

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
03 Jul Normal Normal Normal-Fair
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
04 Jul Normal Normal Fair
05 Jul Normal Normal Fair
06 Jul Normal Normal Fair
COMMENT: Slightly degraded HF comms may have been experienced
at high latitudes for first half of UT day on 3 July.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
03 Jul 17

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
04 Jul 15 near predicted monthly values
05 Jul 15 near predicted monthly values
06 Jul 15 near predicted monthly values

In my opinion, ham radio will show a true decline when the FCC agrees to let our allocated sections of the spectrum to other uses.

Bottom line - we live off the spectrum. When that's gone, we're gone, unless we can re-engineer the hobby to complement today's needs.

Just got back from seeing the movie: Independence Day.

With The alien invaders having knocked out all the "usual" forms of communications, Guess what mode the remaining military forces of Earth choose to go with for their comms?

Good 'ol CW. The original(?) digital mode. Of course Ham-radio operators were mentioned in the flick. Evidently this advanced armada of alien warriors could not read this type of cryptic system of communication. Could it be cuz it was only sent at 13wpm and above!?!

HMMMMM, I wonder it was farnsworth?

You might try a differnt browswer. If that don't work, then you can
decode
a uuencoded file with a stand along decoder. A couple of good ones are
Win Code and ESS Code. Both are shareware, and available from several
sites on the internet. Just look for Windows 95 software files.

CQ Netters,

While browsing through 73 magazine I spotted an advertisement
for a kit of a 2 meter radio that used a Voltage Diode method
of frequency control. Is anyone familiar with this method of frequency
control? How does one program the radio channels on radios with
this kind of technology?
I tried contacting the distributors of the kit, but because of
the time difference and the distance involved a reply may take some
time...
Please reply via e-mail...

4837. NO CODE ARGUEMENT IS DEAD

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-04 00:00:00 UTC
From: enoch@earthlink.NET
Message-ID: <199607040700.AAA21835@armenia.it.earthlink.net>
Source record: 221653

It wasn't CBers, not Technician Class HAMS, nor the NO CODE licensees,
but rather those mature Amateur Radio Operators (real HAMs) whom spent
time and EFFORT in mastering the international morse code -- and maintained
proficiency in same -- who saved the day, the 4th of July [ID4].

Yes indeed, ET would not have been defeated by all the high tech jet fighters,
nuclear weapons, macho US president and the modern day Chuck Yeager (aka
the fresh prince of bell air) had IT NOT BEEN for those steller performance
of those HAMs whow clicked away on the straight key to muster the support
of fellow independence day fighters worldwide. Yes indeed, HAMs who
knew the code came thru once again.

So nest time one argues for no code, tell them to shut up and get a life;
or at least become a bit more professionally proficient in their craft.

NO CODE - give it a rest. A long rest.

And remember, it CW just may save YOUR life.

Don't know how many of you have seen the new movie Independence Day but it gave a real scenario for keeping the morse code. Although I doubt it will ever happen. The aliens had knocked out all other forms of communication around the world except good old hf morse code. They even used straight keys. I enjoyed the movie very much and thought that was a great thing to have in the movie.

Anyone know of any sites that have on-line databases where you can
search for the callsigns the FCC has allocated to other radio services?

I'm intermittently picking up what appears to be a spur from what appears
to be a repeater with the callsign "MNKX230" in the lower portion of the
440mhz band, and I'd like to find out who is responsible for this callsign.

I don't want to discuss the merits of the movie in general. That is
for the rec.movies.flame newsgroup. I just want to add my $0.02 worth
on the CW or no CW requirement debate. I'll wait a few seconds while
you decide if you want to continue or not.

Okay, assuming you've gone this far, you are interested in what I have
to say.

I hope the movie ID4 puts an end to the senseless bickering on whether
or not CW is so antiquated that it should not be required knowledge.
In the movie, the space monkeys have tapped into our satellite network
and use it to coordinate their activities. When the humans are ready
to make their big counter-offensive, they have to coordinate with the
remnants of other air forces around the world. Since the satellites
are tapped, they have to resort to CW on HF.

Now, if using CW to communicate after the space monkeys invade isn't a
good enough reason to learn CW, I don't know what is!

The FCC for one thing can't allocate anything with that call; the
internation agreements limit that one to (I think) Great Britain. FCC call
signs (and DOD ones for that matter) are all A, K, N and W call signs.

>">know when its pumping out full power...

i guess one would want to get the most from any radio transmitter, but that
phrase about "pumping out full power" is very "CBish" - sounds like maybe
a refugee from the CB bands that hasn't been exposed to the idea that some
people actually have radios used for bidirectional communications instead of just
trying to "cover everyone up".

>"You can make a whip from just a 19 inch length of wire and a coax
>"connector, IE take a PL-259,

good answer -- tell the guy what he needs to know - i think my answer was
a pointer to the arrl handbook...

> Just a second...
>When we took the Ham test didn't we have to show that we could figure
>frequency to wave length?

it's in the study materials, although it's possible to pass the test without
having that exact question either on the test or answering it correctly.

>I don't want to flame anyone but it was a basic fact of radio,, I thought.

it is..

> Dean WB0TKC

but like last night on one of the VHF nets i was on, we had a guy that
was on the air but didn't know what his call was...turned out he'd acquired a
radio from someone else and was told it was a CB radio. we told him what he

really had and what he should do to get legal and then went back to the net.

it sounds like KC7QZR could use an elmer and additional reference materials.

4850. How to get a ham licence in the United Arab Emirates??

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-04 00:00:00 UTC
From: herksen@ibm.net
Message-ID: <4rgr6o$3gp8@news-s01.ny.us.ibm.net>
Source record: 221666

Hi there,

There is a possibility that I will stay in the UAE for a considerable amount
of time.
I know that it is hard to get an official ham licence there, but would be really thrilled to receive information about this.
Maybe persons who read this message, have friends or people they know, that have a ham licence in the UAE.

Please reply by email : herksen@ibm.net

THANKS!!!

4851. Re: Grow up and use this newsgroup for ham radio before it's too late

<72527.01012@compuserve.com> wrote:

>Come on guys! (and girls) This newsgroup is for the discussion of ham
>radio news, equipment and related topics. There is actually very little useful
>information that passes through this newsgroup. Most of the posts are nasty,
>rude and deal with everything except amateur radio.

You're right, Steve, there is far too much debating going on here.
We should be talking about interesting things, like VHF repeaters,
traffic counts, and other neato keen ham radio stuff. People
shouldn't post anything debatable here, only ham stuff, like OPDX
bulletins and RTTY bulletins from Australia, and the RSGB news.
Then we'd all fall asleep or get bored to death and your wish would
come true.

>Somebody asks a simple question and instead of getting an intelligent
>answer, they get blasted for their spelling mistakes, or the way the
>question was phrased, or how wrong they were to ask the question,
>or scolded for having a no-code tech license and insulted for not
>knowing Morse code.

Usually when people ask a simple question, the ratio of responsible
answers to smart remarks is about 10 to 1. The one thing I notice
that really gets the fur flying is when someone posts something they
assume to be a fact, and then someone else doesn't agree with
it. For example, you said:

>We are in more danger than ever of getting our bands taken from us.

and you posted it as if it were a fact. If you had said 'I THINK we
are in more danger.....' then it would have been your opinion, which
you are entitled to as everyone else is. I don't think we are in any
more danger of loosing ham bands today then we ever were. But lots of
people like you keep saying we are, based on what, I don't know.

>Would any of you be proud to show this newsgroup to the "Little LEO"
>people as part of our defending their attempts to get our frequency space?

I would venture to guess that after the ARRL's screw up that the
'Little Leo' people already got a ton of email that would make this
newsgroup look like cookies and warm milk.

>I don't think so! Although amateur radio is actually a very prestigious hobby,
>a lot of the posts to this newsgroup show otherwise. The Internet is getting
>larger at a rate beyond everybody's expectations, and this newsgroup
>represents amateur radio.

There you go again, stating unfounded facts. This newsgroup is part of usenet, which is hooked to the interenet. It might 'represent' ham radio to you, but it sure as hell doen't represent ham radio to me. This is NOT ham radio. Ham radio (note the word 'radio') has to do with radio. Nothing 'radio' involved with internet. I would venture a guess that probably half of the 'hams' who participate in the discussions you read here don't even own an HF radio. Look in ANY newsgroup. You will find the same thing you find here. Any unmoderated newsgroup has the same type of things you are complaining about. Because this is internet, not amateur radio. But internet is a bit like ham radio. Internet allows introverts, who are not capable of carrying on a conversation with a real person, to pop out from under a rock and attempt to become bigger than they are in real life for a few minutes because there is nobody around to look in the eye and nobody around to slap them. Get use to it. It's not going to change.

Jim Steve and Chris,

Thanks for all the attention. I guess anyone who points out your collective feet of clay is fair game for gratuitous insults. Facts are inconventient and so are the first casualties in these little games so they are conveniently twisted or forgotten altogether. Perhaps a review is in order.

Let's see Jim you took the time to insult and condesend to a 16 year old Boy Scout whose crime was caring about amateur radio. You regualrly use a tone that is demeaning to people you are "correcting" from time to time you earn a one liner. Naturally if someone is so foolish as to take issue with you they "crawl out from under a rock" and are "pin heads" these terms certainly shows your detractors for the lower life forms that they really are.

Steve you and Chris are quite a team your performance last Christmas aimed at Drew was wonderful. Particularly considering the season. Name calling seems to be your only talent and your penchant with intelegence is very interestng, are you learning disabled or challenged in some way? If this is so I would be more than happy to leave you alone please let us all know.

Chris last but not least. In an effort to put good ol' Drew down you posted some medical "facts" but Chris you have no professional credentials to state medical "facts" I recall several physicians telling you you were absolutely wrong. You use the name of Ohio State, a institution of higher learning with a medical school, is your sig without any disclaimer apparently to lend credence to your opinions. Perhaps we should not go down this road again E. Gordon Gee was not too impressed last time since you don't speak for the University.

Perhaps you should all take this to alt.flame somewhere and let those interested in amateur radio have their newsgroup back. It might be nice if folks could post questions and comments without fear of gratuitous childish insults. Apologies to all for the bandwidth if the three mousketeers want to continue this they will be doing by themselves.

73 Jerry

4853. Phonetic alphabets (Alpha Bravo Charlie Delta) (revised)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-04 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk

Phonetic Alphabets (Alpha Bravo etc)
July 1996

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.
This collection currently includes alphabets for the
following languages:

English, French, German, Dutch, Flemish, Spanish,
Portuguese, Italian, Rumantsch, Danish, Norwegian,
Swedish, Finnish, Czech, Slovak, Polish, Hungarian,
Croatian, Serbo-Croat, Romanian, Turkish, Hebrew,
Russian, Swahili, Chinese and Esperanto.

This posting supersedes the one of 22nd May. Changes are
minor.

My thanks to the many contributors, not all of whom are
acknowledged below.

Please report any errors. Please also mail or post any
further information or anecdotes, or specific references
where I have only second-hand information.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest; in the case of Web pages I ask that care be taken,
as it is easy to mangle something. Note that there is also a
brief version of this collection.

Following discussions last year this article is not now
posted to alt.usage.english. As of 10th April it is now
crossposted to various *.answers groups.

You may find a copy of this article and some other material
on the World Wide Web at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

Copies of this article may also be found at:

<http://www.columbia.edu/~fuat/cuarc/phonetic.html>

***** ENGLISH *****

The NATO phonetic alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[This alphabet dates from about 1955 and is approved by the
International Civil Aviation Organization, the FAA and the
the International Telecommunication Union; note that
different bodies prefer different spellings, so one also
sees: Alfa Juliett Juliette Oskar Viktor]

[The alphabet above is from the Cambridge Encyclopedia of
Language. An alphabet with Alfa X-ray can be found in The
U.S. Department of Defense Dictionary of Military Terms]

[UK police use Indigo(??) instead of India.
German army handbook 90/91: Alfa Foxtrott Juliett.
Italian version: Alfa Charly FoxTrot Giuliet Romio Wiskey.
An Indonesian phrase book: Beta Ultra Volvo Whisky X-ray.
A precursor of the present alphabet had: Alfa Coca Metro
Nectar Siera Union Whisky Extra]

Phonetics for digits (from an amateur radio FAQ):

zero one two tree fower fife six seven eight niner

From the Cambridge Encyclopedia of Language:

zero wun too tree fower fife six seven ait niner

'Telecom B':

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found also in Swedish, Dutch, Hungarian telephone
directories. An 'analogy alphabet' in a Kenyan directory
has Charlie and no Y. A Swiss directory: Andrew Charlie
Lussy Queenie Sugar. French/German vocabulary books: Andrew
Charlie Lucy Mike Nelly Sugar Xmas. English phrase book for
Spanish speakers: Charlie]

'British A':

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich.
An 'international' alphabet in a business book for French
has: Italy Kilogram Zu"rich; the corresponding book for
German has: Italy Kilogram Xanthippe Zu"rich]

Telephone alphabet used in India:

Army Brother Cinema Doctor English Father Gold Hotel India
Jam King Lady Mother Navy Orange Paper Queen Raja Sister
Table Uncle Victory Water Xray Yellow Zero

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway
Ontario/Ocean Pacific Quebec Radio Santiago/Spain Tokyo
United Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile,
Finland, Greece, Guatemala, Hawaii, Italy, Kentucky,
Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas,
Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John
king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas
union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Pre-1954 U.S. Navy Radio Alphabet:

(Communications Handbook, 1945)

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

"Used by Armed services of USA & GB" (ARRL Handbook, 1945)

Able Baker ... Easy ... Tare ...

Allied Services 1945:

Able Baker ... Edward ... Tape ...

From a book entitled "The Complete Morse Instructor..." (1944):

Able Baker ... Easy ... Tare ...

RAF 1943-56:

Able-Afirm ... Item/Interrogatory ... Jig/Johnny ...
Nab/Negat ... Peter/Prep ...

[In other alphabets of the Able Baker class: affirm, cast,
hypo, inter, negat, option, over, prep]

RAF 1942-43:

Apple Beer Charlie Dog Edward Freddy George Harry In
Jug/Johnny King Love Mother Nuts Orange Peter Queen
Roger/Robert Suga Tommy Uncle Vic William X-ray Yoke/Yorker
Zebra

[cf. aircraft in Dambusters raid: A-Apple B-Baker C-Charlie
E-Easy F-Freddie G-George H-Harry J-Johnny K-King L-Leather
(officially L-London) M-Mother N-Nuts O-Orange P-Popsie
S-Sugar T-Tommy W-Willie Y-York Z-Zebra]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John
King Lincoln Mary New_York Ocean Peter Queen Roger Sugar
Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc

Uncle Vic William X-ray Yorker Zebra

RAF 1924-42:

Ac Beer Charlie Don Edward Freddie George Harry Ink Johnnie
King London Monkey Nuts Orange Pip Queen Robert Sugar Toc
Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink
Johnnie King London Monkey Nuts Orange Pudding Queenie
Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love
Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray
Yoke Zed

:

Well, I *was* looking into possibly starting a hobby out of HAM.
But judging by these past 2 posts, one by Bill Newkirk WB9IVR, I see that
the attitudes and childishness isn't lmited to the people on "CB" Radios.
Perhaps HAM isn't for me after all, if Bill is any indication of the
types of people that are out there.
Oh, and by the way, Bill - while you were busy slamming this
other guy for his spelling, I noticed YOU need a few grammar lessons as
well, things that were learned in Elementary School.... such as when you
end a sentence while quoting, the period goes inside the quotes, not
outside. Also you seem to have forgotten to end a sentence or two with a
period. Hmm. Seems you aren't the perfect God-almighty after all.
I was told that if a person needed a question answered or some
kind of help, that other HAM operators were happy to help out, and that
the operators of HAM radios were like a family. But what I've just seen
sounds like Channel 19 at a truck stop. No doubt I'll receive a bunch of
childish ranting and raving, cussing, etc in my mail box, so until
then... Ciao!

Hi Gary, what you say is surely correct (at least theoretically)
but does confirm my worries: In an typical crowded amateur band
establishing QSO's is a far greater activity than the few rag-chewers.

Clover is for two reasons not too well adapted to amateur radio:
The transmitter must be very linear, else the QRM by intermods will be
horrendous (with 4 carriers in the 500 Hz window), secondly the protocoll
is optimized for conveying large amounts of text, and not the usual
bits and pieces.

It is claimed that digital modes or CCW can filter out signal from noise
that else could not even be heard. Does not sound like it would work for
random calls too well? And untill EME-QSO's in CCW or Clover using only
1 Kw EIRP are commonplace, the claim of superiority remains a theoretical
prediction.

4857. Faster CW Skill Building

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-04 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <31DC047F.60C5@aloha.net>
Source record: 221673

Should you be interested in building up your CW skills,
read on:

INTRODUCTION

You can become a high speed CW operator! How?
Practice. What kind of practice? Read on, if,
and only if, you really WANT to become a good
QRQ CW operaotor; that is, one who is comfortable
working DX at 30 to 40 wpm, and want to try to
compete in contests with the real ops who whistle
along at 40 to 50 wpm, and sometimes even
faster. Nose, KH6IJ, could accruately
read calls during contests sent above 75 wpm,
so it is said. (By the way, his daughter, Frances has
just picked up his call via the new Vanity Call program.
She is living in Honolulu, as did Nose in his later years,
after having been a teacher here on Kauai for many years.)

Tree, N6TR, reports that to be a good SPRINT CW
contest operator, you had better be comfortable in a
CW rag-chew at 50 wpm! And a lot of ops score pretty
high in the CW Sprints.

So back to the topic: what is the best, most efficient
way to get up to those sorts of operating speeds? How
best to use the practice time?

First, lets assume you are at least at around 13 wpm
now, and licensed as either General or Advanced.
Both classes of license have access to the same CW
bands in all nine of our HF bands. The Extras have
some 25 kHz more spectrum on down to the lower end
of "only" four of these nine bands: 15, 20, 40, and 80;
pretty good incentive for upgrading, should DX'ing and
contesting be of motivating interest to you.

So, here is how, and how much to practice.

PRACTICE METHODS

1. Experience on the Air -- QSO's

Lots of CW QSO'ing outside of contest times works wonders.
Put the microphone away for several weeks, put SSB, SSTV,
digital mode operation, or whatever else out of your mind
for the same time period. This is to be a time of pure CW

skill improvment.

Contesters use computer logging programs which do most of the transmitting for them, as well as the log tasks and duplicate checking; some programs do even more! But to use them efficiently to contest, you better be a pretty good keyboard operator as well, and also know the use of the funtion keys, without using crib notes or key overlay guides during the 'test.

In what follows, both CW and keyboard skills will be addressed.

2. QRQ Receiving Practice

While waiting to acquire and set up some of the practice programs, do on-the-air receiving practice. Find QSO's in progress at a speed you can comfortably pencil/pen copy. Now, put the pen/pencil down, and just start listening. Yes, try to recognize the letters as they come along, and group them into words on your minds "blackboard". Not easy to do, well keep trying anyway. It is going to take awhile, maybe even three or four weeks before you can follow these easy speed QSO's in your head without writing everything down! Jot down the call, the ops name, QTH and report, while just listening to the rest.

While doing this, if you can find a willing friend, there is a way to augment this sort of practice completely away from CW. Have your friend/spouse/relevant-other spell words from a story or newspaper article to you! He is to read the story to you, but not the word sounds, but spelling the words to you outloud. This is what is going on when one is "reading CW in his head"; words are being spelled to you "outloud", and you must form these spelled words into meaningful thoughts. Start at, one letter/word space every second sounded by your helper. Have a letter spoken every tick of the clock. This is a speed of 12 wpm (at the Paris standard, of 100 letters/wordspaces per minute equaling 20 wpm CW speed). Tune in WWV to get exact beats every second.

When you have no trouble forming the thoughts of the story/article in your mind as the words are spelled to you at this rather slow pace, then have your friend double his rhythm, that is, two letters/word spaces per second spoken two per tick. This, of course, doubles your word reading rate to 24 wpm. A big jump for CW, but not for learning to read words spelled out to you in clear, plain English!! When you know the story comfortably at this rate, your actual in the head CW reading speed should be close behind, and you may be well on your way to QRQ operation.

At QRQ, you will be receiving letters/word spaces at 3 per second at a 36 wpm CW rate.

Maybe your friend can get the rythm going at 3 letters/spaces per clock tick, and you will know exactly what 36 wpm CW sounds like, this is a typical QRQ DX and contest operation speed. Of course, using a musician's metronome would allow you to exactly set the number of beats per minute; 20 wpm being 100 beats, 36, 160 per minute, 50 wpm, 250 letters/spaces, etc. My mechanical metronome has a highest beat rate of 208 per minute, or a bit over 40 wpm.

The best RUFZ scores are being posted up around the 450 plus letters/numbers/spaces per minute! Of course, call signs only are being sent, and these guys already know all the prefix CW sounds! You will learn more about the RUFZ call sign/typing practice program below.

Computer aided CW training programs are available. They will send code groups, random words, text and typical QSO's. They are all advertised, nearly monthly, in the ham magazines. Morse Academy is good, as is Code Master V. All of the included CW tests which come with MA can be sent by the computer at very high speeds, not just the speeds intended. Of course, they don't last long at high speed, but are very helpful for in-the-head CW reading practice. Using Code Master V, you can input via the keyboard, or text (.txt) file input, kilobytes of text for very long high speed CW listening practice runs. I have taken lots of long text files directly from various internet sites, and copied it directly into a CM V text file for this sort of high speed practice. I edit out a lot of punctuation marks from the text; I don't want to learn or know the code for quotateion signs, semicolons, etc.!

3. Using the Computer for Practice

The apparent purpose by the authors of MA and CM V is to teach the code, from A on up to text speed, assuming you want to use the keyboard to copy what is rcvd'd. So if you really want to write down what is being rcv'd, then by all means use these programs to build up your keyboard skills, ear to key stroke response, to copying behing. These programs can do that for you, just fine! But I will show you how to use them to get up to 50 wpm, copying in your head.

Now that you have CM V or MA, or another, here is how to use it to become QRQ qualified.

We are still talking about methods to read the code mentally, not writing or typing anything down as you receive it. That comes later.

With lots of CW text available in the computer program, you are ready to begin. Once you have determined your present 100% comfortable hand copying speed using pencil or pen, set your computer program to send clear text at about 5 wpm faster than your hand copying speed. Turn on the sending of the text at this speed, sit back, and just listen for 30 minutes, twice per day. First you will only be catching a letter every now and then; when you do, you will, without effort, congratulate yourself. While this happens, you will miss the next several letters! But keep at it. Soon you will get all the letters of a single word, again congratulations as you say the word to yourself, and again a lot of letters/words go on by, unrecognized! But you are making progress. In a couple of weeks, or so, especially if you were able to get a friend to spell the words of stories/text to you, you will be understanding the text being sent. As soon as you do, up the speed another 5 wpm. Keep it up, and in 3 or 4 months, you may be up to 40 or more wpm! Try it, it works, and you will be amazed.

At some point, you must add in the typing and contest program use practice. The RUFZ program already mentioned will send the call signs of the world to you at ever increasing speed; you must enter them correctly via the keybord

to score. PED is a CT simulating pile-up training program. Both TR and NA logging programs have simulator programs built in for training in the use of the program. As said, PED does the same for CT. These programss you may download at no cost from other sites listed here at the KA9FOX web page for example, from the VE7TCP web site; PED411.zip is available at oak.oakland.edu in the SimTel\msdos\hamradio file.

All four of these programs will improve your contest typing skills.

3. CW Sending Practice Helps Loads

Don't practice sending using the keyboard for these practice ideas!

Use a bug, or preferably an electronic iambic keyer and paddle set up. The electronic keyer sends "perfect" CW ccharacters,spacing and rythm, a big help in your mental training activity.

Adjust the paddle to very light action. You don't want to be slapping the key all about the table top! Good paddle keys are heavy for this reason; put it on a mouse pad also to help keep it put.

Now begin practice to send FAST. This sending practice also works wonders on the way to becoming a QRQ operator. Why? Because, now you must form words to express ideas in your mind, while simultaniously sending the thoughts out as CW. This inverts what has been going on in your mental processes to receive CW. As you increase your speed ability, you will not even be thinking "letter to CW" translation, but will be mentally and automatically sending CW as if it were another language with which you have become quite comfortable. Your mind will be training on CW in such a way that when it can send fast, it will use the same subconcious patterns to also receive fast. KE7V has told me he raised his QRQ speed to 55+ wpm (275 letters/word spaces per minute) using this method specifically!

There is more to encourage you to practice. Once you are going QRQ mentally, and sending QRQ, and typing acurately to a contest logging program, you may want to also practice clear text copying to the keyboard, and copying behind many, many words. Certainly, both MA and CM V are designed to teach just that skill. And then your QRQ mental rate will increase even more, and you can then be a competent, competitive CW Sprint Contest op!! All by accomplishing Tree's 50+ wpm ragchew rate.

Have fun, keep the practice up daily, hold daily CW QSO's; you will get there. I am still working on it, but I am probably older than 90% or more of you reading this!

Actually a 19" piece of coat hanger just looks "black" and doesn't
attract to much attention, except as an antenna.
Twenty years ago, I was having Mosley 5/8 wave 2 meter antennas
stolen off of my car regularly (they looked a lot like CB antennas, and
this was in the middle of the CB craze). So I made a 1/4 wave antenna
from a coat hanger and put it on the car.
A month or so passed. Then, there was a rash of car break-ins,
and *my* car was broken into. My ICOM IC-22A (2 meter rig) was stolen.
And yes... they stole the coat hanger antenna, also.

BTW... after this (and the insurance paid off) I got a new 2 meter
rig and a Hustler colinear antenna. It was never stolen.

I noted with pleasure, that two of my personal favorite hobbies were involved in savng the world.

Where would we be without ham radio and a Macintosh!

I saw the movie last evening - great fun! Should be a real winner. And yes, CW *does* play a key role. Without giving away too much, at one point in the movie they were short of fighter pilots, but there seemed to be no shortage of CW operators and a secret Air Force base!. I'd bet in real life it would be the other way around.

John, WB2ARS

4863. Corrected Copy-CW Skills

Newsgroup: rec.radio.amateur.misc

Source record: 221679

Sorry about the spelling errors in my original post;
also found a few other mistakes. So, if this was
of interest to you, here is a better text!

INTRODUCTION

You can become a high speed CW operator! How?
Practice. What kind of practice? Read on, if,
and only if, you really WANT to become a good
QRQ CW operator; that is, one who is comfortable
working DX at 30 to 40 wpm, and want to try to
compete in contests with the real ops who whistle
along at 40 to 50 wpm, and sometimes even
faster. Nose, KH6IJ, could accurately
read calls during contests sent above 75 wpm,
so it is said. (By the way, his daughter, Frances has
just picked up his call via the new Vanity Call program.
She is living in Honolulu, as did Nose in his later years,
after having been a teacher here on Kauai for many years.)

Tree, N6TR, reports that to be a good SPRINT CW
contest operator, you had better be comfortable in a
CW rag-chew at 50 wpm! And a lot of ops score pretty
high in the CW Sprints.

So back to the topic: what is the best, most efficient
way to get up to those sorts of operating speeds? How
best to use the practice time?

First, lets assume you are at least at around 13 wpm
now, and licensed as either General or Advanced.
Both classes of license have access to the same CW
bands in all nine of our HF bands. The Extras have
some 25 kHz more spectrum on down to the lower end
of "only" four of these nine bands: 15, 20, 40, and 80;
pretty good incentive for upgrading, should DX'ing and
contesting be of motivating interest to you.

So, here is how, and how much to practice.

PRACTICE METHODS

1. Experience on the Air -- QSO's

Lots of CW QSO'ing outside of contest times works wonders.
Put the microphone away for several weeks, put SSB, SSTV,
digital mode operation, or whatever else out of your mind

for the same time period. This is to be a time of pure CW
skill improvement.

Contesters use computer logging programs which do most of the
transmitting for them, as well as the log tasks and duplicate
checking; some programs do even more! But to use them
efficiently to contest, you better be a pretty good keyboard
operator as well, and also know the use of the function keys,
without using crib notes or key overlay guides during the 'test.

In what follows, both CW and keyboard skills will be addressed.

2. QRQ Receiving Practice

While waiting to acquire and set up some of the practice programs,
do on-the-air receiving practice. Find QSO's in progress at a speed
you can comfortably pencil/pen copy. Now, put the pen/pencil down,
and just start listening. Yes, try to recognize the letters as they
come along, and group them into words on your minds "blackboard".
Not easy to do, well keep trying anyway. It is going to take awhile,
maybe even three or four weeks before you can follow these easy speed
QSO's in your head without writing everything down! Jot down the call,
the ops name, QTH and report, while just listening to the rest.

While doing this, if you can find a willing friend, there is a way
to augment this sort of practice completely away from CW. Have your
friend/spouse/relevant-other spell words from a story or newspaper
article to you! He is to read the story to you, but not the word
sounds, but spelling the words to you out-loud. This is what is going
on when one is "reading CW in his head"; words are being spelled to you
"out-loud", and you must form these spelled words into meaningful thoughts.
Start at, one letter/word space every second sounded by your helper.
Have a letter spoken every tick of the clock. This is a speed of 12 wpm
(at the Paris standard, of 100 letters/workspaces per minute equaling
20 wpm CW speed). Tune in WWV to get exact beats every second.

When you have no trouble forming the thoughts of the story/article in your
mind as the words are spelled to you at this rather slow pace, then have
your friend double his rhythm, that is, two letters/word spaces per second
spoken two per tick. This, of course, doubles your word
reading rate to 24 wpm. A big jump for CW, but not for learning to read
words spelled out to you in clear, plain English!! When you know the story
comfortably at this rate, your actual in the head CW reading speed should
be close behind, and you may be well on your way to QRQ operation.

At QRQ, you will be receiving letters/word spaces at 3 per second at a
36 wpm CW rate.

Maybe your friend can get the rhythm going at 3 letters/spaces per clock tick,
and you will know exactly what 36 wpm CW sounds like, this is a typical
QRQ DX and contest operation speed. Of course, using a musician's metronome
would allow you to exactly set the number of beats per minute; 20 wpm being
100 beats, 36, 180 per minute, 50 wpm, 250 letters/spaces, etc. My mechanical

metronome has a highest beat rate of 208 per minute, or a bit over 41 wpm.

The best RUFZ scores are being posted up around the 450 plus letters/numbers/spaces per minute! Of course, call signs only are being sent, and these guys already know all the prefix CW sounds! You will learn more about the RUFZ call sign/typing practice program below.

Computer aided CW training programs are available. They will send code groups, random words, text and typical QSO's. They are all advertised, nearly monthly, in the ham magazines. Morse Academy is good, as is Code Master V. All of the included CW tests which come with MA can be sent by the computer at very high speeds, not just the speeds intended. Of course, they don't last long at high speed, but are very helpful for in-the-head CW reading practice. Using Code Master V, you can input via the keyboard, or text (.txt) file input, kilobytes of text for very long high speed CW listening practice runs. I have taken lots of long text files directly from various Internet sites, and copied it directly into a CM V text file for this sort of high speed practice. I edit out a lot of punctuation marks from the text; I don't want to learn or know the code for quotation signs, semicolons, etc.!

3. Using the Computer for Practice

The apparent purpose by the authors of MA and CM V is to teach the code, from A on up to text speed, assuming you want to use the keyboard to copy what is rcv'd. So if you really want to write down what is being rcv'd, then by all means use these programs to build up your keyboard skills, ear to key stroke response, to copying behind. These programs can do that for you, just fine! But I will show you how to use them to get up to 50 wpm, copying in your head.

Now that you have CM V or MA, or another, here is how to use it to become QRQ qualified.

We are still talking about methods to read the code mentally, not writing or typing anything down as you receive it. That comes later.

With lots of CW text available in the computer program, you are ready to begin. Once you have determined your present 100% comfortable hand copying speed using pencil or pen, set your computer program to send clear text at about 5 wpm faster than your hand copying speed. Turn on the sending of the text at this speed, sit back, and just listen for 30 minutes, twice per day. First you will only be catching a letter every now and then; when you do, you will, without effort, congratulate yourself. While this happens, you will miss the next several letters! But keep at it. Soon you will get all the letters of a single word, again congratulations as you say the word to yourself, and again a lot of letters/words go on by, unrecognized! But you are making progress. In a couple of weeks, or so, especially if you were able to get a friend to spell the words of stories/text to you, you will be understanding the text being sent. As soon as you do, up the speed another 5 wpm. Keep it up, and in 3 or 4 months, you may be up to 40 or more wpm! Try it, it works, and you will be amazed.

At some point, you must add in the typing and contest program use practice. The RUFZ program already mentioned will send the call signs of the world to you at ever increasing speed; you must enter them correctly via the keyboard to score. PED is a CT simulating pile-up training program. Both TR and NA logging programs have simulator programs built in for training in the use of the program. As said, PED does the same for CT. These programs you may download at no cost from other sites listed here at the KA9FOX web page for example, from the VE7TCP web site; PED411.zip is available at oak.oakland.edu in the SimTel\msdos\hamradio file.

All four of these programs will improve your contest typing skills.

3. CW Sending Practice Helps Loads

Don't practice sending using the keyboard for these practice ideas!

Use a bug, or preferably an electronic iambic keyer and paddle set up. The electronic keyer sends "perfect" CW characters, spacing and rhythm, a big help in your mental training activity.

Adjust the paddle to very light action. You don't want to be slapping the key all about the table top! Good paddle keys are heavy for this reason; put it on a mouse pad also to help keep it put.

Now begin practice to send FAST. This sending practice also works wonders on the way to becoming a QRQ operator. Why? Because, now you must form words to express ideas in your mind, while simultaneously sending the thoughts out as CW. This inverts what has been going on in your mental processes to receive CW. As you increase your speed ability, you will not even be thinking "letter to CW" translation, but will be mentally and automatically sending CW as if it were another language with which you have become quite comfortable. Your mind will be training on CW in such a way that when it can send fast, it will use the same subconscious patterns to also receive fast. KE7V has told me he raised his QRQ speed to 55+ wpm (275 letters/word spaces per minute) using this method specifically!

There is more to encourage you to practice. Once you are going QRQ mentally, and sending QRQ, and typing accurately to a contest logging program, you may want to also practice clear text copying to the keyboard, and copying behind many, many words. Certainly, both MA and CM V are designed to teach just that skill. And then your QRQ mental rate will increase even more, and you can then be a competent, competitive CW Sprint Contest op!! All by accomplishing Tree's 50+ wpm ragchew rate.

Have fun, keep the practice up daily, hold daily CW QSO's; you will get there. I am still working on it, but I am probably older than 90% or more of you reading this!

Yes, well, that's the strange thing about getting interference from an
ajacent service -- you can never quite tell what the callsign is. It took
me a whole evening to piece together what I did, since normally I just
hear a burst of static and then a portion of a callsign. Luckily by
listening long enough and the randomness of the static I was able to
piece together what I did of the call. As someone else has already
pointed out, it was probably "WNKX230", which is owned by a ambulance
service 10 miles south of my current location, in Warwick, RI. That
seems to coorespond with the DF'ing I did one afternoon where I was
able to track the signal down to a 1 sq. mile radius in Warwick.

ObCW: Just one more practical, excellent reason for keeping the code
requirement -- so you can more readily identify callsigns of repeaters
in ajacent services that have spurious emissions into the amateur
spectrum! :-)

From: Keith Nelson <knelson@aimnet.com>
Message-ID: <31DBDC6F.4C31@aimnet.com>
Source record: 221682

I am using Yaesu FT-890 in my Totota 1992 PU V-6 for mobile operations. The noise from the electronic engine control (located on the passenger side panel) is severe and making reception impossible. I am an electrical engineer and I have done mobile noise supression in the past but I am stumped on this one. It appears to be radiated interference not conducted but I may be mistaken.

I would appreciate suggestions.

Please respond by email. Thanks.

If the repeater is IDing in Morse, it might be WNKX230 if the first dit is
being missed. That ID smells like GMRS.

Good morning. It's Sunday the 7th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The full GB2RS scripts, including the regional news bulletins, are now available on the RSGB Headquarters Home Pages on the Internet. The pages were officially launched from RSGB HQ on the 1st of July, following an experimental period using volunteer resources. The address is http://www.rsgb.org/ For a short period it will be necessary to add 'dot uk' to the end of the address, so for the moment the full address is 'http://www.rsgb.org.uk/'.

The 1996 AMSAT-UK Colloquium takes place between the 25th and 28th of July at the University of Surrey in Guildford. Admission is by ticket only, so for further details and a booking form, please send a large SASE to Ron Broadbent MBE, G3AAJ, whose address is correct in the RSGB Call Book.

The RSGB has commissioned an Opinion Survey on the Future of Amateur Radio and members will have received their copy with the July RadCom. The survey is open to anyone, whether or not they are a member of the RSGB, so if you would like to receive a survey form, write to 'Survey Request', RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Hertfordshire, EN6 3JE. Please enclose a large self-addressed stamped envelope. Please note that the completed forms must be returned by the 29th of July.

Radio Amateur Relief Expeditions - R.A.R.E. - are holding a summer school for Romanian young people to teach amateur radio, art, and conversational English. They will be using special event station callsign YR0OR from tomorrow, Monday the 8th of July, for about 11 days. From the 21st to the 25th of July the team will be in the Slovak Republic in order to introduce amateur radio to disabled young people. For more information on R.A.R.E. write to Don Sunderland, G6FHM, whose address is correct in the RSGB Call Book, but please note that he will be out of the country until the end of the month.

Now some items of HF DX news from the weekly RSGB DX News Sheet, edited by Chris Page, G4BUE:

From Martinique, WJ2O will sign FM/WJ2O from Thursday the 11th of July for one week. His activity will include an entry in the IARU HF Championship contest next weekend.

From Aruba, AA7VB will be active as P49Z from Thursday the 11th until the 16th of July. He will also enter the IARU HF Championship.

And from Guantanamo Bay, KQ4GC will sign KG4GC on SSB and RTTY from the 12th to 18th of July.

Now news of some special event stations:

GB0SPR is on the air this weekend, from the 5th to the 7th, from the Crusaders' 'Spree 96' camp at Danbury, near Chelmsford in Essex. The Crusaders is a registered charity which provides activity camping weekends for children and young people.

And Buxton Radio Amateurs are operating GB4HHF from Harpur Hill Fete near Buxton in Derbyshire. The station is on HF and on 6, 4 and 2 metres plus 70 centimetres.

Next weekend, the 13th and 14th, Barking Radio and Electronics Society will be operating GB2DTS from the Dagenham Town Show. In addition to HF and VHF demonstration stations, packet radio, satellite TV and weather satellite reception will be on display. All are welcome to visit the site at Central Park, Dagenham, adjacent to the Civic Centre. Test transmissions will be on the air from around Thursday the 11th. For further information, call Bill Chewter, G0IQK, on 0181 478 4758.

And next Sunday, the 14th, GB8TVR will be on the air on 2 metres from the 'TVR Mania 96' car club exhibition at the National Watersports Centre, Holme Pierrepont, in Nottinghamshire. Look for the station on 144.33MHz SSB and S22 - 145.55 MHz - FM between 10.00am and 5.00pm.

Next the Rally News:

The Southend and District Radio Society is holding a radio and computer boot sale at its club headquarters at the Druid Scout Centre in Eastern Avenue, Southend, today, Sunday the 7th of July. Please note this is a new venue. The event features a bring and buy stall, and talk-in is on 2 metres channel S22.

The York Radio Rally also takes place today, the 7th, in the Tattersall Building at York Racecourse. The event features amateur radio, electronics and computer equipment and Morse tests on demand. Talk-in is on 2 metres channel S22.

On Saturday the 13th of July the Cornish Radio Rally and Computer Fair takes place at Penair School in Truro. The event features Morse tests on demand, and a bring and buy stand. Doors open at 10.30am and talk-in will be on 2 metres channel S22. For further details, contact Ken, G0FIC, on 01209 821073.

And next Sunday, the 14th, the Sussex Amateur Radio and Computer Fair will take place at Brighton Racecourse. For full details, contact Ron, G8VEH, on 01903 763978.

Now for the contest news:

The Venezuelan Independence Day contest is taking place this weekend on the HF bands, and finishes at midnight UTC tonight, the 7th of July. Brief rules are on page 23 of the July RadCom.

Next weekend, the IARU HF Championship takes place for 24 hours from 1200UTC on Saturday the 13th of July. The contest is on CW and SSB and covers all bands from 1.8 to 28MHz, excluding the three WARC bands. Work any station and send an RST report plus your ITU Zone - the UK is in Zone 27. IARU-member headquarters' stations will send their society name instead of the ITU Zone.

And the RSGB's Low Power Field Day contest takes place over two sessions, from 09 to 1200 and 13 to 1600 UTC, next Sunday, the 14th. Full rules are in the September 1995 RadCom.

And on VHF, a major event in the RSGB Contest Calendar is taking place this weekend - VHF Field Day. This 24-hour contest finishes at 1400 UTC today, Sunday the 7th of July. Competing groups must have already registered, but look for plenty of activity on the 70, 144, 432 and 1296MHz bands. The rules can be found on page 13 of the 1996 Contesting Guide, which was published in the September 1995 RadCom.

The 3rd RSGB 144MHz Backpackers contest is taking place today, the 7th, from 1100 to 1500 UTC. The rules are in the September 1995 RadCom.

And the 2nd RSGB 50MHz Backpackers contest takes place next Sunday, the 14th of July, from 11 to 1500 UTC. The rules are also in the September 1995 RadCom.

And now the solar factual data for the period from the 24th to the 30th of June compiled by Neil Clarke, G0CAS:

This week we start with news from the Space Environment Centre at Boulder. It has been decided that the month of July will be designated 'Solar Minimum' and not 'Sunspot Minimum'. With all the new data that is now available there is a need for a change from sunspot numbers to a new classification called solar minimum. This illustrates that sunspot numbers are now out of date and in fact in December this year a major meeting is to take place at Boulder to decide which new solar parameters will decide when solar minimum has been reached. Of course we will keep you informed with any more news on this.

During the period, solar flux levels remained steady and averaged 71 units. The 90-day solar flux average was 69 on the 30th. X-Ray flux levels remained at A1. Geomagnetic activity remained at 'quiet' levels every day with the 25th at Ap 4 units and the 29th up to Ap 9. The average for the period was Ap 6. The 17th to the 23rd saw solar wind speeds at normal velocities and averaged 380 kilometres per second. The particle density averaged 8 particles per cubic centimetre. On the 22nd and 23rd the Bz was magnetically south at around 3 nanoTeslas, and for the rest of the period it was at zero nanoTeslas.

Now the ionospheric data for Central France for the period from the 21st to the 27th of June. The F2 daytime highs averaged 6.4MHz and the

darkness hour lows averaged 3.3MHz. The daytime highs took place between 1800 and 2100 hours and the darkness hour lows between 0100 and 0400 hours. Only eight hours of blanketing E were recorded at Poitiers between the 21st and the 23rd and then nothing up to the 27th.

And lastly the solar forecast. The quiet side of the sun is expected to be rotating into view and solar flux levels are expected to decline to the mid to high 60s. Geomagnetic activity is expected to be at 'quiet' levels all week. Ionospheric MUFs during daylight hours are expected to be about 19MHz for the south and 16MHz for the north. Darkness hour lows are expected to be about 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Golf and M1 Alfa Bravo series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

Hey everyone. I'm in the process of writing my home page, which will have a (hopefully) large list of links. If you know of a ham page or are in charge of a ham page which you would like me to add a link for, please drop me an email and I will be glad to do it.

Thanks and 73.

writes:

[snip]

>Name
>calling seems to be your only talent and

[snip]

Well Jerry...looks like we can add "liar" to your fine list of attributes. I
have NOT called anybody any names ever, but I think you know that.

While in the past you have always "twisted" peoples words to defend
your previous ignorant and inaccurate statements...you have now stooped
to the lowest of lows...lieing.

>Chris last but not least. In an effort to put good ol' Drew down you
>posted some medical "facts" but Chris you have no professional
>credentials to state medical "facts" I recall several physicians
>telling you you were absolutely wrong.

The only person who disagreed with what I had to say was you. The one
and only medical professional who contacted me about my statements, ended
up agreeing with me, after he too, saw your replies as feeble attacks.

I still stand behind every word I have said.

>You use the name of Ohio State,
>a institution of higher learning with a medical school, is your sig
>without any disclaimer apparently to lend credence to your opinions.

Sorry, but no...thats not true, and again, I think you know it. Simply adding
my occupation for informational reasons is common, and acceptable.

>Perhaps we should not go down this road again E. Gordon Gee was not too
>impressed last time since you don't speak for the University.

Im glad you brought this up...as a matter of fact, his office did contact me,
to ask permission to pull back all my previous posts, to follow up on your
unfounded acusations. About 2 days later they contacted me again, and agreed
that not only have I done nothing wrong, and my sig was fine, but that you
were some sort of trouble maker, that wont get the time of day from this
institution in the future. (as you can see...I still have the same sig)

We actually ended our conversation with his office apologizing to me, and
laughing at (you) the incident.

>Perhaps you should all take this to alt.flame somewhere and let those
>interested in amateur radio have their newsgroup back.

Jerry, you are the one that needs to go there...you spend more time attacking
and flaming then any other person here, and contribute nothing.

I refuse to waste anymore with someone who stoops to such lows.

Goodbye Jerry, but most of all, good luck.

Jim Romelfanger, K9ZZ
412-1/2 Ash Street
Baraboo, WI 53913

NEWS RELEASE - SPECIAL EVENT STATION

July 8 and 9: K9JYX/Circus Train Mobile will operate from 1400 UTC until 2030 UTC both days from the Great Circus Train as it travels from Baraboo, Wisconsin's Circus World Museum (housed in the original winter quarters of the Ringling Bros. Circus) to Milwaukee with 20 double-length flat cars carrying more than 60 priceless, fully restored circus wagons for the Great Circus Parade the following Sunday. Operation will be on 20 or 40 meters, whichever band is in the best condition, around 7.240 or 14.240. There MAY be extended hours on July 8. A 9 X 12 SASE with three units of first-class postage is required for a certificate. SASEs go to Don Evenson, K9JYX, 401 11th Street, Baraboo, WI 53913.

you didn't read what i wrote. KC7QZR needs to get in touch with the other locals
and probably review the materials he used to study for the test. if he had the
ARRL materials, i believe (relying on memory here) there's even an example
of what he wanted complete with a list of materials, sources of supply and, yes,
even an explaination of why those values are the ones to use (at least at an
entry level explaination...if he wants the engineering version, he can ask for it.)

> Oh, and by the way, Bill - while you were busy slamming this
>other guy for his spelling, I noticed YOU need a few grammar lessons as
>well, things that were learned in Elementary School.... such as when you

>period. Hmm. Seems you aren't the perfect God-almighty after all.

didn't say i was. and welcome to deconstructionist typography. i do have damon
knight's treatment on grammar from GEnie that is a super reference for only a
few typewritten pages - at least it addresses the common errors and mis-
conceptions most people make.

and this is news - not english class. they'd take points off for not capitalizing
the first word of a sentence. can't say there's a hard and fast rule about trailing
punctuation inside of quotes these days. depends on the usage to some extent.
i suppose you think that there should be two spaces after a period. although that's
something you did with typewriters and not when you have proportional fonts
available.

> I was told that if a person needed a question answered or some
>kind of help, that other HAM operators were happy to help out, and that

>sounds like Channel 19 at a truck stop. No doubt I'll receive a bunch of
>childish ranting and raving, cussing, etc in my mail box, so until
>then... Ciao!

oh, come now. the guy claims a ham license. therefore, it's expected that he knows something about where the information is located about such things as how to build a simple 1/4-wave whip for 2m. but even if he hadn't known that (as i said, you can pass the test without understanding c=f<lambda>), the fact that the lingo is out of whack indicates that our new KC7 needs further orientation.

remember the object is not to "pump out the most power" but to communicate. and if you actually read up above there, we did tell our bootlegging friend on wednesday that he should consider getting license and he would be welcome, but until then he should just listen and not transmit. in that respect, we were correct in that we advised an illegal station to stop being an illegal station and to get the license and be legal. for that, we run the risk of a citation ourselves (for communicating with an unlicensed station).

i don't think that's a sign of someone not wanting to help. however, things such as some misspellings probably comes from having Dr. Moench at Rose as a mentor ("A -rotor- is the part of a motor that moves. A -rotator- is the device that turns the antenna!").

C'mon Guys! Waiting for ALIENS is not a reason for mandating the
learning of Morse Code. Maybe a good reason for mandating F-16
training, though. <<G>>

Principles aren't of much account anyway, except at election time.
After that you hang them up to let them season.

No, my comment on the punctuation was merely to make a point.
You made several snide (sp?) remarks to him, one of which was making him look ignorant because of his spelling. I was simply trying to point out that while his spelling was being insulted by you, your punctuation was bad. No, it's no big deal, but I was trying to say was it didn't make sense to insult him for his writing/spelling style when yours had its faults too. None of us is perfect.
As for the antenna, perhaps he's just a buff who likes to receive only, not transmit, and doesn't have a liscence yet. The handbook does say that's perfectly legal. Maybe he wants to see what's "out there" before getting into the hobby?
I myself am in that position. However, I'm quickly learning that HAM operators aren't the type of people I had heard they are. This fool Myron Calhoun took it on himself to write me an ignorant insulting letter, implying that newcomers are welcome but if they have any questions that they are NOT welcome to ask them and that any information they get is to be obtained solely on their own.
He ALSO commenced to make a weak attempt at hurling insults at me for asking such a "stupid" question about antenna/wave length. What the old fool didn't take time to do is see who asked the question. That was not me, yet he is going to write me and slam me for it.
Myron challenged my "maturity..." I have yet to figure out where he comes off with that. Even if I HAD asked the question about the antenna and wave length, how does that make someone immature?

Look... I was told HAM operators welcome new comers with open arms and are always happy to help someone else get started in the hobby. I was looking in to it on my own and discovered that there are many ways to go (2M, 6M, 10M, etc) and wasn't sure which way to go. I haven't asked though, because anytime someone asks a question like that, he receives nothing but rude replies and remarks. I haven't asked PUBLICLY that is... I've had the fortune of finding ONE friendly ham though.
I was also told to start going into the amateur (look up the definition for amateur by the way) newsgroups and that I could start participating and asking questions there to help learn. Boy, were they wrong. New HAM operators, or prospects, are treated rudely and insulted... not what I would call a warm welcome.
My apologies to everyone here. I was foolish in believing such an ignorant thing... Don't bother replying publicly, nor in e-mail.
When I post this, I am going to unsubscribe from the asshole, er, amateur radio newsgroups - email will be erased without being read if it's from the newsgroups... don't bother. And don't bother ME.

Chris, they can't be *real* hams if they don't have medical
operations to complain about, if they don't have political opinions about
Clinton, and if they aren't mildly misogynistic.

:)

Seriously, they can talk about anything they desire on simplex. Frogs
are a fine topic; so is hide and seek (just like a "real" fox hunt
except there are only the two of them.) Why, in the old days, young
hams used to use low power CW to talk to their friends down the
block. Anything goes.

And on the repeater, they shouldn't shy way, they should just use
common courtesy -- use simplex when possible -- but the repeater is
there for their use as well as the "drive-time" group, the coffee
club, the gardeners, etc.

For a while, we had an under 18 net once a week on the repeater; it
was fun to listen in to them.

:(BTW, I passed my Tech exam, and am now waiting for my calls. Thanks to
:all who wished me luck.)
:

As you probably know, your call is KB0WWP (Isn't the web wonderful?)

>they get is to be obtained solely on their own.

Hi RWC.

I would like to offer an explaination. It seems the internet can bring out the worst in people. Many come here just to flame and attack. I dont know why it is, perhaps its the anonymity of being behind the keyboard, or something else, but I DO know its basically true in most groups...not just ham radio ones.

There are those who do these types of things reguarly, like Burt, Gerry, Drew and others, as nothing more than to cause trouble. While even I have been sucked into petty flame wars, I think its safe to say that most of us do NOT condon, or support the likes of the above mentioned.

What you heard about hams helping others that want to join is true of most of us. All I will ask, is that you dont base your entire opinion about amatuer radio, by what you hear here.

I would also like to offer any insight, help, suggestion, or anything else you may want, regarding amateur radio.

Take care.

4888. Link two windows95 systems using packet and TCP/IP??

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-05 00:00:00 UTC
From: herksen@ibm.net
Message-ID: <4rjfig$o9c@news-s01.ny.us.ibm.net>
Source record: 221612

Hi there,

I wonder if there are people here, that have experience with connecting
to computer systems using a network, but using a PACKET LINK.

So, instead of a ethernet cable a packet link.

Anyone??

I guess I'll need a packet server on both sides of the link, apart from
the windoze95 systems that are connected to those "packet servers".

Can someone shine a light on this?
I want to prevent inventing the wheel again...

Regards

Rob / TA2IX

>that was a great thing to have in the movie.

Under an intergallatic treaty, beings from all other planets that use radios outside their atmosphere must demonstrate the ability to receive by ear, and send by hand, messages in Morse code.

In a "real scenerio", the aliens would have intercepted all of the those CW transmissions. But they would have used laptops to copy it automatically.

The characters in "Independence Day" should have been thankful that the aliens were obviously bottlegging, extraterrestrial CBers!

BTW...how did Jeff Goldblum and the Fresh Prince break the shield? A transmitter and a computer...packet?

4891. SF Bay Area ham license test dates?

Ship Island is visited by hundreds of people every day this time of year.
The beach out there is a popular tourist destination...water much
prettier than in the Sound. There is at least one ferry out of
Gulfport that makes several runs out there a day and they do charters
too I think. The company is called Ship Island Excursions if you wanna
give 'em a shout.

here is one i found...
From: gopstein@helix.squibb.com (Rich Gopstein)
Newsgroups: rec.ham-radio
Subject: FT736 2m RX mod!
Date: 15 Jan 91 15:17:09 GMT
Sender: news@soleil.UUCP
Organization: Bristol-Myers Squibb PRI, Lawrenceville, NJ
Lines: 37

I found this on Compuserve. I tried it on my FT736, and it works! I
wonder
what the other diodes do? Does anyone have a service manual for the
FT736?

Fm: Chuck Scott N8DNX 76556,3335

You can modify the 2 Meter section for 141-154 MHZ by adding D27
(not installed in USA version). This is normally soldered to the
board but you can easily install it by simply shoving the leads into
the connector. The 2 Meter section is the middle board looking into
the radio from the top. The connector (J09) is the large one on the
right side of the board, half way back. You want the cathode (striped
end) of a small signal diode in pin 7 and the anode in pin 4. Pin 1
is toward the front of the radio.
To receive over a slightly wider range, place the SAT switch in RX
mode,
press ENT[D] then enter a desired frequency and press ENT[D] again. You
can
enter any frequency from 100 to 200 MHz this way. Unfortunately, the
synthesizer does not actually cover that range. As far as I can tell
the
bottom end is about 138.5 (not quite the 136.5 needed for the weather

sats).
The top end is about 155.6. You can't perform this stunt with the normal (non-satellite) VFO's. Also, once a frequency is entered in this way, it is
possible to tune toward the normal range but tuning away will place you back
in the 141-154 range. Using the same method yields aprox 220.0-229.5 & 423.0-454. You may store these frequencies in the SAT Memories.

http://www.geocities.com/Hollywood/5860
have fun.....

Take it to E-MAIL, you idiots!

Are you all in SO MUCH need of attention that you have to let
the WHOLE WORLD view see how DUMB you can act???

This usenet group may be "OLD HAT" for you old timers, but for
newbies interested in the hobby, it may be their first exposure,
and I am quite sure this kind of crap sure makes them want to
get involved in radio.

Uh huh.

If you have NOTHING PRODUCTIVE TO TYPE, KEEP YOU DAMNED KEYBOARD
SILENT. I have little more to say, and will finish by saying that
after 3 years of frequenting r.r.a.m, you (who know who you are)
have dragged it down to the point where it's almost as useless
as a 100% SPAM newsgroup.

You are an embarrassment to the 80+ years of amateur radio history.

Thank you.

SB PROP @ ARL $ARLP027
ARLP027 Propagation de KT7H

ZCZC AP48
QST de W1AW
Propagation Forecast Bulletin 27 ARLP027
From Tad Cook, KT7H
Seattle, WA July 5, 1996
To all radio amateurs

SB PROP ARL ARLP027
ARLP027 Propagation de KT7H

Over the past week the author of this bulletin was relaxing on the coast of Washington State at Tokeland and then at Pacific Beach. Night time listening on low frequencies with a general coverage receiver was a treat, as we were away from the city in a lightly populated area on the Pacific shore.

Average Sunspot number was down just six points for last week compared to the week previous. Average Solar Flux was unchanged. Here at the bottom of the solar cycle it is difficult to make forecasts based on recurring activity on the rotating Sun, since there is so little activity to track through the solar rotation.

The latest forecast from NOAA Space Environment Service Center shows no geomagnetic disturbances expected over the next month, and the Solar Flux staying right around 70. It is expected to drop below 70 over the next few days, then come back up to 70 around July 17.

Best bets during the Summer for worldwide propagation are 20 meters during daylight, especially north south paths, and 30 and 40 meters after dark.

Sunspot Numbers for June 27 through July 3 were 25, 24, 23, 23, 11, 13 and 13, with a mean of 18.9. 10.7 cm flux was 71.4, 71.4, 70.9, 70.7, 70, 70.4, and 69, with a mean of 70.5.

4908. This Week in Amateur Radio #171 (for air through 7/12/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-05 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <xrAM15m.sanderman@delphi.com>
Source record: 221632

Here is a summary of news items covered on edition #171 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 12-Jul:
-
1. FCC Explores Instituting Electronic Filing of Formal Comments
2. AMSAT-NA Board Prepares Recommendations to IARU for WRC-99
3. ARRL Committee Operates Field Day from Dallas Hotel Balcony
4. Another Handi-Hams Official Injured in Auto Accident
5. Shuttle Columbia Completes All 11 Scheduled SAREX Contacts
6. Special Event Station Calendar
7. New MIR Solar Arrays Provide More Power, May Block R0MIR Signal
8. "The RAIN Dial-up" from Chicago
9. KE6VNU Arrested for Jamming Police Frequencies in Oregon
10. WRTC-96 Event Next Weekend, Seeks Tax-deductible Donations
11. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
12. Morris "Morrie" Shepherd, W7LVI, SK, Trustee of WWDXC Station
13. Weekly Propagation Forecast
-
Funding for the program's transmission and production expense was
provided this week by a grant from Paul Nemmers, N0ZYT, of Prairie
City, Iowa, where "This Week in Amateur Radio" is heard on the KD0KU
repeater on 146.61 MHz serving Des Moines and all of Central Iowa.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

[re: getting ht's for his young sons after they get their tech licences]

: Well, it looks like they may soon do it. My question is: What type of
: behavior is appropriate for kids on amateur frequencies? I'm sure they're
: not going to spend time talking about their rigs and when the next hamfest
: is. Is it ok to let them operate simplex at low power and have fun
: looking for frogs by the river (and whatever kids think is fun)? I guess

heck, if they're following proper procedure (i.e. identifying themselves,
being curtious, not using profanity, etc.) they can talk about whatever
they want. i'd be realy happy to listen to some people looking for frogs
most times rather than the drivel i usually hear people gabbing on about.
in fact, as long as they're operating properly, there's no reason why they
should get any flack talking abou;t whatever they wanted to on the
repeater. but you should have no problems on simplex. just make sure
they remember to be curtious and to mention they're call sign every few
minutes & there you go.

Gee, I missed the part that must have showed ham radio operators doing
the message sending/receiving. All I saw was military personal
doing the CW and a brief mention that ham radio operators had told
the media that something was going on but they didn't know what.

>Yes indeed, ET would not have been defeated by all the high tech jet fighters,
>nuclear weapons, macho US president and the modern day Chuck Yeager (aka
>the fresh prince of bell air) had IT NOT BEEN for those steller performance
>of those HAMs whow clicked away on the straight key to muster the support

>knew the code came thru once again.

>So nest time one argues for no code, tell them to shut up and get a life;
>or at least become a bit more professionally proficient in their craft.

>NO CODE - give it a rest. A long rest.

>And remember, it CW just may save YOUR life.

While I totally enjoyed the movie, I left the
theater knowing full well that all it was was that...a movie.
Oddly enough I met another ham friend who was at the
movie with his kids. We both had a good laugh at the
prospect that CW was used in the manner in which it
was. There was no rational to suggest or explain why
CW became the moode used.

But what the heck, all hams will get a kick out of the
movie if they have any sci/fi interests at all.

No reason that pactor or any other digital mode would not have worked
just as well. In fact no reason that ssb would not have worked. I
doubt seriously that in a real emergency enough ,keys and cw capable
radios would have been found. you don't seriously think the aliens
could not have decoded the cw when they could intercept the most
sophisticated communications we had. Get real!

>the last thing I want to do is get a bunch of local hams ticked off at
>me.

Odds are that no one will even hear them if you pick a simplex
frequency that is not one of the commonly used ones (eg. don't
have them use 146.52)

Bill you are quite right. Then again, I was trying to be humourous. I know, dont give up my day job. I've been an active ham for 27yrs. I have not touched a key on the air in over five years. That was when I discovered the joys of packet/amtor/digital, etc. But I still like to get on HF voice. Also I got into ATV. My point being, there is a ton of other things to learn in amateur radio. It is a dynamic hobby. Always changing and growing.

Truthfully Bill, all this hooey about code stuff...Like there isn't enough really important crap to worry about in the world?

IF IT AIN'T FUN, THEN DON'T DO IT!

73, Randy, N7CJE

4921. ICOM IC-2350H - Need HELP !!

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-06 00:00:00 UTC
From: Bill Stewart <stewart@peganet.com>
Message-ID: <31DE7CE7.5ACC@peganet.com>
Source record: 221502
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

I have an ICOM IC-2350H dual band rig with what I believe is a
programming bug.

When I transmit on either band it does not mute the receiver on the
other band. So when I am key down if someone talks, or was in the
middle oftalking, on the subband they come through my speaker and are
picked up by my microphone as background, and retransmitted. It's quite
annoying to hear someone talking about a totally unrelated subject while
I am trying to rag chew.

To head off the inevitable questions, no this is not a harmonic, and
yes, I have the subband mute functions on in both bands. This is simply
a case of the transmitter failing to mute the receiver of the subband.

ICOM offers no direct support, and has not responded to the compuserve
address someone was good enough to send me. My dealer, THE HAM STATION,
says there's no fix for the problem.

I refuse to accept that I have to manually turn down the volume on the
subband when I wish to transmit, and then remember to manually turn the
volume back up. This is not only stupid, it's darn poor engineering.

Anybody got a suggestion for a fix or mod ?

Thanks much,

I'm in DESPERATE need of a VHF amplifier module number:

438 BGY

I believe it's a Mullard device, not sure, though I'm sure there are equiv.s. I've tried RF Parts, San Marcos, Ca. without any luck and a few UK suppliers. Any help??

xfm@internet-ireland.ie
tel: +353-88-544-793

Please eMail me direct if possible. Thanks.

Not quite what my "cc" recorded,
but I'm not particularly surprised at the mis-representation.

4931. number of hams world wide

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-06 00:00:00 UTC
From: bert@skypilot.demon.co.uk
Message-ID: <31de9b10.7661394@news.demon.co.uk>

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.cb,rec.radio.shortwave

HOW MANY HAMS?

According to the most recent statistics of the International Amateur Radio Union, there are 2.6 million licensed radio ama teurs in the world. The list of countries, where about 90% of the world hams reside, may hold some surprises (see Table 1).

Japan has half of the world Amateur Radio population: 1.3 mil lion. The Japan Amateur Radio League (JARL) has a membership of 194,000.

The United States has one-fourth of the world radio amateurs. Less than 30 years ago, the US was home to more than half of the world amateur population. However, at that time the total world ham population was barely more than 400,000! Amateur Radio has grown in the US but has been growing even faster in a number of other countries, not just Japan. ARRL membership is about 172,000.

Thanks to reunification, Germany has the largest number of ama teurs of any European country. The Deutscher Amateur Radio Club (DARC) has a remarkable 77% of the licensed amateurs in Germany as members; nearly 50,000 of its 57,000 members are licensed.

The United Kingdom has nearly as many amateurs as Germany. The Radio Society of Great Britain (RSGB) has a somewhat smaller, but still impressive 44% of licensees as members. The total member ship of the RSGB is about 30,000.

Indonesia's position on the list may surprise you, since Amateur Radio barely existed there as little as 25 years ago, but it would not surprise anyone who attended the 1991 IARU Region 3 Conference in Bandung. Organisasi Amatory Radio Indonesia (ORARI) is a well organised and effective national association in a country where radio communication is very important, and member ship in ORARI is compulsory to hold an amateur license. According to ORARI, its membership figures are trending downward for rea sons that sound similar to those that affected Amateur Radio in the US following the CB boom of the late 70s. Still, Indonesia is in no danger of losing its top-10 status.

Spain is another country where Amateur Radio has experienced rapid growth in recent years. For more on Spain, see Hows DX? and Happenings this month.

Our northern neighbour, Canada, is in a growth spurt, thanks to recent changes in its licensing structure.

Accurate statistics for Russia are difficult to come by at present, but the estimate of 38,000 is probably close enough to establish its relative position. A new national organisation, Soyuz Radiolyubitelej Rossii (SRR), was voted into membership in the IARU in 1994.

Italy has about 30,000 amateurs, making it either the fourth or fifth largest country in Europe in terms of amateur population, depending on whether you count Russia (many of whose amateurs are in Asia) as a European country.

Finally, Brazil is the lone South American country on the top 10 list, although in fairness to Argentina it must be said that our LU friends are close behind, in position number 11, with 24,000 licensees.

If you look at the statistics in The Radio Amateur Callbook you will note that some of their figures, particularly for Japan and Indonesia, are dramatically lower than those given here. The reason is that the Callbook figures only include those amateurs for whom they have address listings.

By ITU Region, the IARU statistics show there are 417,000 ama teurs in Region 1 (Europe, Africa, the Middle East, and the former Soviet Union), 780,000 in Region 2 (the Americas), and 1.4 million in Region 3 (the rest of Asia and Oceania).

Who does the IARU count as a radio amateur? In general, only those individuals who hold both an operators license and a sta tion license are counted. In Japan, for instance, operators licenses are issued for life and the total number of operators licenses ever issued is well over two million! Station licenses, on the other hand, have five-year terms and are a more accurate indicator of potential activity.

A country that should soon join the Top 10 is Thailand, where 92,000 operators licenses have been issued and 38,400 have re quested a station license!

4932. questions on uk amateur radio.

```
Scanners
========
1. Is it legal to produce a list of who uses what frequency
and to comment on such transmissions and frequencies in
magazine articles?
2. Has any action been taken against Interbooks of Perth for
their publication.
3. Are you concerned about of this type of publication.
4. Are there any plans to change the law and make listening to
all frequencies a right, if not why not. This already in
existence in the USA.
5. Given the wide us of scanners now is the 1949 W/T Act out of
date, it is nearly 50 years old.
6. How many people have been prosecuted for listening to the
Police in the last 12 months
7. How many people have been prosecuted for listening to the
Fire Service in the last 12 months.
8. How many people have been prosecuted for listening to the
Ambulance service in the last 12 months
9. How many people have been prosecuted for listening to Air
craft in the last 12 months.

Aeronautical Mobile operation
=============================
1. When do you expect /am operation be introduced?
2. How many years has /am been under discussion?
3. What are the issues involved?
4. What is causing the delay?
5. Do you know /am operation is already available in the USA and
other countries?
6. Do you plan to have it available as an Nov, in the USA ANYONE
can operate /am who holds an amateur licence and have been
able to do so for many years.
7. What has happened so far?
8. What are the names of the RA/CAA/RSGB officials involved?
9. When is the date of the next meeting to discuss the subject?

Packet
======
1. How can the 'pecuniary interest' clause be removed from the
amateur licence to permit adverts for amateur radio equipment

only on packet?
2. Radio Amateurs have always sold their equipment 'on the air'
```

on voice in a casual way and ignored this clause and no action has ever been taken against them why should they not be al lowed to take advantage of new technology. Adverts for amateur radio equipment only are legal in USA Canada and other countries, another an example of the RA taking an out of date, backward looking interpretation of the ITU rules when more with it administrations take a more enlightened view.
4. Did you know that no password system for sign-on operates on packet and therefore the system is widely open to abuse. Anyone can presently sing on and pirate any callsign and send a bulletin using that callsign. This has already resulted in some very unsavoury bulletins enabling sent on the network. Passwords are readily available on the BBS Software but many Sysops have so far refused to implement them. In the USA and other countries passwords are mandatory.
5. Packet in the USA is already connected to the 'Internet' and offering international 'gateways' would it be legal for such connections to be made here, if not why. If it is Ok what would be the restrictions placed on the use of it.
6. How many HF Packet BBS stations have been licensed and what is the time it takes to obtain an Hf Packet BBS licence.

Phone patch
==========
1. Will we ever get phone patch here?
2. What are the issues involved?
3. What are the agencies involved?
4. Who are the contacts at those agencies?
5. Would any changes to the amateur licence have to be made to permit it to happen?
6. Are you are aware the USA does permit this mode?
7. Are you aware of the benefits of such and that it could save lives.
8. Would the 1984 Telecoms Act permit phonepatch?
9. Is the RA in favour of the phonepatch.

General Questions on AR
=======================
1. Are you aware of the declining numbers of amateur radio operators in the UK, now about 200 per month.
2. Is RA concerned about the overall decline in activity on the amateur bands.
3. Are you aware that there has been an increase of 41,000 hams in the USA in the last 12 months.
4. Two years ago we were told by the RA Chief Executive that we would be getting 'the greetings messages facility' for use from home but this has not happened yet why and when will it happen. If the delay is being caused by contacting overseas administrations can the facility be introduced for 'inter UK working' in the mean time.
5. How much money did RA spend on promoting AR last 12 months

8. Will the RA make public the agenda for any meeting it has

with the RSGB. In the USA this is a legal requirement,
(Government in the Sunshine Act) this gives interested par
ties the opportunity to make an input.
9. Do the RA plan to run a BBS for 'on line' access to RA data
bases in the USA the FCC already have this available and its
very good.
10. Is the RA available on the Internet if not do you have any
plans to do so the FCC already have a page on the World Wide
Webb.
11. Why are the minutes of RSGB/RA meetings 'secret' and not made
available. Why must the RA be so secretive in 1995.
12 Are you aware that GB2SM (Science Museum) has closed after 50
years of operation.
13. I read in Who's Who you are a radio amateur what is your call
sign and are you active.
14. Will you permit crossband repeaters from HF to UHF/VHF ie
2m/70cm to 28mhz.
15. Is it legal to operate the main hf station remotely, using
uhf/vhf and DTMF tones e.g. while driving or walking. This is
already available in the USA.
16. Will you make available for sale the internal RA staff phone
directory numbers. FCC already make this publication avail
able.
17. Do you plan to introduce an 0800 number FCC already have one.
18. Will you allow 10m FM repeaters, already other countries in
Europe have these, as usual we are behind the times.
19. How many NOv's are in force on amateur licences to combat
abuse. Have any been prevented from using 2m.
20. How many licenses are presently revoked
21. Will you publish the full list of Ar callsigns showing the
status of every callsign ie when it was last issued

4933. number of hams world wide.

Newsgroup: rec.radio.amateur.misc

UK/USA Amateur Radio Figures 1995
=================================

Population No of Hams Increase/ decline
UK 1994 60,000,000 62,000
USA 1994 250,000,000 631,600

UK 1995 60,000,000 60,000 -2,000
USA 1995 250,000,000 672,600 +41,000

UK 1 ham per 1,000 population
USA 3 hams per 1,000 population

Based on the USA figure we would have 180,000 hams in the UK.

UK/USA Radio Society Membership
==============================

1990 1995 Increase/decline
RSGB Membership 35,000 30,000 -5,000
ARRL Membership 156,000 172,000 +16,000

5,000 x 30 pounds means 150,000 pounds loss of income
in the last 5 years to the rsgb.

The ITU DSI report states 'The number (of radio amateurs is growing)
at a steady rate of 7% per annum '. This would mean we should
have a yearly increase of around 4200 here and that is not hap
pening instead we have a 3% fall.

RSGB have lost 10,000 members in 9 years.

The highest membership of RSGB was 1987 with over 37,600 members
now it is down to 28,500 a loss of nearly 10,000 members in 9 years.

The loss is about 1,000 members per year for the last 9 years
with a loss of revenue of 300,000 pounds (10,000 X 33).
thats 3 million pounds over 10 years.

RSGB membership figures (when available) taken from the RSGB Annual
Report
=========================================================================

April1996 28,500
June 1995 29,805
June 1994 30,916
June 1993 31,018
```

June 1992 32,416
June 1991 34,581
June 1990 35,225
June 1989 35,868
June 1988 36,809
June 1987 37,601

P.S. In the RSGB Annual Report Peter Kirby G0TWW RSGB General Manager
states 'Membership has shown a modest increase....'
news to me I thought 29,805 was a decrease from 30,916!
When asked the RSGB always seem to say the membership has
increased
its a pity the figures don't show that.

City and Guilds Examination Figs 1990-1994

>Thanks much,
I have the same radio, it is about a month old. My manual states that the
sub-band mute feature "Automatically mutes sub bands audio signals when the
main and sub bands signals are simultaneosly received" The key word is
received, it doesn't mention anything about muting the sub band when
transmitting. Maybe you have an earlier version of the manual and since then
they have corrected the typo.
Here is something that may make you feel better. My manual made no
reference to the cross band repeat feature that Icom mentions in their ads.
But it is there. While the radio is on and set to your desired frequencys(they
may have to be programmed into memory and not in VFO mode), push both MAIN

buttons and the SET button simultaneously, hold for two seconds you will see a flashing "L" underneath each band indicating you are operating cross band. Now you have your own repeater! To turn it off, hold just the SET button for 2 seconds. NOTE: Turning the radio off does not turn this feature off.
There is supposed to be a remote code for this feature as well, but again, the manual makes no reference to it. If you learn of these, please e-mail me.

Well Chris, I am a new ham also, but from what I can understand from the
RULES and REGULATIONS, looking for frogs and such would be just as
important as some of the rag chewing that I have heard and probably be
just as or more interesting!! 8-) Sounds like your plan is a sound one to
me, just remember to teach them good operating skills and use their
callsign. It's great that your kids want to step in your footsteps!!

Gary Zabriskie (garyzab9@tcd.net) wrote:

: At one time novice licensees were given a callsign with a letter "N" in
: the prefix i.e.: WN7SIU . When the ham upgraded the "N" would be dropped
: and would be just W7SIU. Nowadays there is a different callsign "block"
: for each class of license. But even that does not tell you the class of
: the operator (or whether the operator has any class HI HI). Many hams,
: myself included, decide to keep a callsign after upgrading. In my case I
: didn't like any of the callsign blocks that were being used when I
: upgraded.

In 1966, when I received my Novice license, I was WN8RWL. When I upgraded
to General Class, my callsign became WA8RWL. Pretty simple, eh?

The WA8 prefix was assigned because all of the available W8 and K8 prefixes
had been assigned. In the call areas with states with large populations,
such as New York and California, WB prefixes were already in existence.

I have held an Advanced Class license since 1968. If I had kept up with
events at the time, I believe I could have requested an early KB6xx format
when I renewed in 1978. As it is, KF6CR is somewhat an old-timer Advanced
callsign. The KA (2x2) prefix was assigned only in "1" land, KC6xx were not
issued in California, leaving only KB6xx, KD6xx and KE6xx before mine. I
don't see too many of the earlier 2x2 callsigns around.

This is one reason that I may keep my callsign when I upgrade to Extra.

: As far as I know, the A in WA7HAM or B in WB7RAD were not to signify any
: particular class. They were simply alphabetically chosen. There are
: repeaters with the assigned callsigns that have prefix WR, and I believe
: there were club stations with WC.

One of the issues of QST Magazine in 1978 explained this whole mess.
The vanity callsign system will cause any connection between callsign format
and operator privileges to blur even further. Fortunately, with the
availability of callsign servers on the 'Net, coupled with inexpensive
callsign databases on CD-ROM, lookups will become fairly easy.

: Yours is a great question. Hope I helped you in some small way. Perhaps
: someone else can shed more light on the subject.

Hope I have helped, as well.

73 de Jim - KF6CR

Todd Jonz <todd@tj.org> writes:

> o CW will be the only means of getting the message
> through after the aliens invade

When they make a movie about combat pilots, all the combat pilots moan. When they make a move about fire-fighter, all the fire-fighters moan. The experts always recognize the impossibilities. Only the ignorant accept the premises. It is impossible that an alien race capable of travelling between the stars having studied us for at least 50 years, would not intercept the world-wide CW message and take action to prevent the worms from doing them in.

I appologize for this awful delphi newsreader which doesn't keep up with my speed of typing and won't let me go back and edit a previous line. Above should be fire-fighters and move should be movie.

It would be funny (HI HI) if half the procoders didn't believe that "Independence Day" is a good reason to continue Morse code testing. I'm afraid to continue using Morse code considering the negative effect it has had on a lot of otherwise rational hams.

Date: 1996-07-06 00:00:00 UTC
From: fedpress@omnifest.uwm.edu
Message-ID: <4rndom$fv2@omnifest.uwm.edu>
Source record: 221531

If you already have an HF rig, Ten Tec makes a transverter that goes from 14 to 50 MHz. I believe it's around $100. If you don't, MFJ now has a 6m SSB/CW transceiver for around $250. I've worked people across the country using either of those two rigs with low-elevation dipoles.

If you're not yet on 6m, probably your smartest initial move would be to shell out 14 bucks for a (postpaid) copy of "Six Meters: A Guide to the Magic Band" by Ken Neubeck, WB2AMU. It's available from Worldradio Books, Box 189490, Sacramento CA 95818. (Calif. residents add 93 cents tax.)

My mailer has the unfortunate tendency to bounce 10,000 copies of any
junk mail I receive back to the sender. Be warned.

4953. RAC 'n Rollup v1.0.1 Update / Q & A

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-06 00:00:00 UTC
From: n2ckh@raven.cybercomm.net
Message-ID: <4rk002$u1i@crow.cybercomm.net>
Source record: 221636

SUBJECT.: RAC 'n Rollup Questions and Answers
DATE....: 1996 - Fri. Jul. 5 05:00 Local/ Fri. Jul. 5 09:00 Zulu
FROM....: Steve Hajducek, N2CKH
TO......: ALL RADIO AMATEURS

First I would like to thank all current customers for their orders, and
patience, I never expected R 'n R to be in such a demand.

We are updating our entire Internet connectivity. The WEB page is about
to be updated and our provider for the BBS is also being changed, the
new URL will be: http://www.QTH.com/n2ckh.bytewise.org

During the month of July and August e-mail to our normal address may at
times be bounced, we recommend using:

n2ckh@raven.cybercomm.net

from which this notice is being sent, however, response time from this
address will not be as fast as from n2ckh@bytewise.org is normally. We
are also preparing an automated listserver for future updates.

What's new ?

A version of RAC 'n Rollup geared especially for Windows95, which can
be minimized to the task bar as well as moved around the screen (works
under all versions of Windows) is being readied for release. It is a
640 x 480 version and will replace the 1024 x 768 version in furture
shipments of R 'n R. User feedback has indicated that the 640 x 480
version is the most popular, so the 1024 x 768 version is no longer
going to be shipped, it will be available for download however.

For current users, we can also e-mail all updated files as a file
attachment, just drop us an e-mail request.

The ability to partially use and later reuse laser label stock is still
being developed, we hope to have this ready for the next full release.

We have identified a possible conflict between R 'n R and a Clean Sweep
under Windows95, two users had to remove Clean Sweep to run R 'n R. Also
one user needed to reduce from True Color 32 to High 16 under Windows95

using a Diamond Stealth 64 PCI video board on a Pentium 100 system
with
4MB of video RAM, otherwise he was receiving a GPF upon starting R 'n
R,
this one I have not figured out yet. Another problem experienced by a
user was the installation of Procat, which installed the XBS200.DLL to
his Windows/System directory, this caused an ISAM error, he had to
edit the R 'n R .INI files changing from XBS110.DLL to XBS200.DLL,
this
he says works fine.

Lastly we had some prolems in shipping disks, where one or more files
or an entire disk was effected, probably by postage xray, we are now
stamping all disk packages "DO NOT XRAY" in red ink.

New Features in v1.0.1:

o Support for both the November '95 and May '96 releases of the RAC
CD-ROM.
o CD-ROM drive designator support increased from drive G: to drive K:
o Improved support for Laser and Ink Jet printers with added support
for
Co-Star type printers.
o Network printing works 100% for those Monday morning printing tasks
on
the office laser.
o Support for serial printers and just about anything Windows will
support,
including IEEE-488.
o Provision within program to select and setup default printer.
o Selection of mailing label stock by Avery stock number.
o Selectable single or multi label printing.
o Ability to edit addressing data retrieved from CD-ROM.
o User entered mailing address data from QSL manager lists, rosters,
etc.
o Print preview to screen of one or an entire sheet of labels, sized
to
fit or zoomed for reading.
o Export capability to text files, comma delimited files, popular word
processors, spread sheets etc.
o Added display of calculations of both Short and Long path bearing
and
distance for both domestic and foreign stations.
o Added display of Grid Square calculations of foreign stations for a
single set of coordinates per country from supplemental databases.
o Added display of Islands On The Air (IOTA) numbers.
o Support for Hy-Gain DCU-1 and SARtek-1 antenna rotor controllers.
Two
simultaneous rotor controllers are supported, and can be mixed,

on-the-fly selection of rotor is supported. Support is provided for
COM1: through COM8: using standard as well digiport type hardware.
Rotor control can be accomplished via double clicking on Short or
Long
path bearing from the main screen or via the Rotor Control interface
window.
o Added Prefix Search engine database View/Search mode for user
search.
o Added export of Street, City and State for importation by the
Rand McNally StreetFinder '96 mapping software.

The following are some of the most common questions and answers
regarding
RAC 'n Rollup that have been exchanged via internet e-mail during the
last month:

Q: Can I order both the Callbook CD-ROM and your RAC 'n Rollup
program
together ?

A: No, I only sell RAC 'n Rollup. However it is readily available
from
many sources, see the ads in QST.

Q: Does your program work with the revised version of the CD
Callbook as
advertised in QST ?

A: Yes. The "REVISED CD-ROM" has added Country names and Date of
Birth to
the data and a DX Manager Database, all are fully supported.
Version
1.0.1 of R 'n R is not only the answer for everyone that
already has
the first version of the RAC CD-ROM callbook, it has
additional
features that enhance the use of the Callbook in both the
current
version, this "REVISED" version and future versions.

Q: Where can I get the demo version of RAC 'n Rollup ?

A: The file name is RAC_DEMO.ZIP and is 1.3MB is size and takes
about 5 minutes at 14.4KB using Zmodem protocal. At present it
is
available from the support BBS at 1-908-363-2760 and the WEB
site. The version of the DEMO available at the moment is for
v1.0.0
which will work will both versions of the RAC CD-ROM to some
extent,
the v1.0.1 DEMO is expect to be on the BBS as of July 7th and

at
the WEB site by July 14th.

Q: Does RAC 'n Rollup print to laser printers, the RAC program
soes not
properly work with my laser printer ?

A: Yes. R 'n R v1.0.1 supports Dot Matrix, Ink Jet, Laser and
CoStar
type printers. Label stock are selected by Avery part number.
The
only problem we have in supporting printing at present is
getting
the Avery #4013 labels to print on Dot Matrix printers
consistantly
under Windows, all others work fine.

Q: I have just received R 'n R and want to print to labels not
listed
in the selection box, can this be done.

A: Yes. In an attempt to keep R 'n R distribution down to 2
disks, only
the most common Avery label types were provided, just tell me
what
stock number and I will create the file, send to you and add
it to
the BBS support files.

Q: Under Windows95 how cna I make the program minimize to the
status
bar ?

A: With the version currently shipping you can not. However, I do
have
a version now available that does, it is RAC_NROL.EXE and will
be
on the BBS and the WEB site soon. It will also be shipping
with
R 'n R v1.0.1 orders placed after July 7th. We will also
e-mail it
as a file attachment.

Q: In RAC 'n Rollup on CQ-Zone 5 is provided for North America,
why ?

A: Error. We at some point made an editing error in the prefix
database
file, that has been fixed.

If anyone has any questions or comments, please do not hesitate to
contact us.

RAC 'n Rollup v1.0.1 is now shipping and is only $ 9.95 U.S. plus $
1.50 U.S.
shipping/handling in the U.S. or $ 5.00 shipping/handling overseas.

Send your orders with Callsign, e-mail address and mailing address to:

RAC 'n Rollup
C/O Stephen B. Hajducek
U.S. Post Office Box 8
Morgranville, New Jersey
07751-0016

Please makes checks or money orders payable to Stephen B. Hajducek.

Thank you.

/s/ Steve, N2CKH

4954. Re: Family RadioService-Another BIG FCC SCREWUP!

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-06 00:00:00 UTC
From: bkobb@netcom.com
Message-ID: <bkobbDu3MJE.HCD@netcom.com>
Source record: 221637
Cross-posted to: rec.radio.cb,rec.radio.amateur.misc

The Personal Radio Steering Group, Inc. (PRSG) today petitioned the FCC to "stay" (halt) the implementation of the Family Radio Service, scheduled to become effective July 8. The PRSG also petitioned for reconsideration of the FRS rules, to add clarifications on repeaters, telephone interconnection of FRS units, changes to technical standards, and other points.

With its most recent issue of the Personal Radio Exchange, the PRSG also distributed instructions on how to petition the FCC for reconsideration of the FRS rules. No word yet on whether anyone other than PRSG has asked the FCC to reconsider the FRS. (The PRSG BBS is at 313 995 2100.)

One member of the group I was with didn't understand how they could
send it around the world with most of the communications knocked out.
I then explained HF to her. A lot of people don't know that you can
send a signal around the globe on HF without sattelites or anything
like that.

Source record: 221641

Several of us here in Lafayette just decided to venture forth tomorrow for a little portable/mobile h.f. operating from some of the more rare parishes (counties) here in Louisiana.

1. Suggested operating frequencies?

2. County hunters' net?

3. Antenna and/or other tips?

This is just a little impromptu get together to pass a little time and have a little fun doing something different.

Any suggestions would be most appreciated!

4959. Rare Opportunity for FM, TV, 2-m, and 6-m DXers

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-06 00:00:00 UTC
From: Mark Gingrich <grinch@rahul.net>
Message-ID: <4rku0p$r24@samba.rahul.net>
Source record: 221642
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.misc,rec.radio.shortwave

On Sunday morning, July 7, around 8:37 a.m. EDT (12:37 UTC), the Space Shuttle Columbia (STS-78) is expected to touch down at Kennedy Space Center. About 25 minutes prior to landing, as it approaches the U.S. Pacific Coast, the orbiter will experience sufficient atmospheric friction to create an ionized wake, a condition persisting for nearly fifteen minutes as the craft streaks like a meteor over central California, Nevada, the "Four Corners" region, Dallas, central Louisiana, and the Gulf Coast of Mississippi.

DXers working VHF frequencies -- TV, FM, 2-meter, and 6-meter ham bands -- who reside within a few hundred miles of the re-entry track will have a rare opportunity to test if the Shuttle-generated plasma trail permits reception of over-the-horizon signals. The circumstances are similar to meteor-scatter reception: Meteors are typically pea-gravel-sized flotsam that ionize narrow columns of the upper atmosphere for a few seconds; in contrast, the near-airliner-sized Shuttle should cut a much larger plasma swath across the sky over an interval of minutes. These temporary plasmas can redirect very-high-frequency radio signals over the horizon, whereas before reception was limited to line-of-site distances from the transmitter. Signals received via Shuttle plasma scattering may persist for a few minutes.

DXers should tune to a known distant station in the general direction of the Shuttle's re-entry track -- that is, if you are south of the track, try for a station to the north, on an unoccupied, interference-free frequency in your area. The following Web site may assist you in finding candidate FM stations, their frequencies, and transmitter power:

http://www.airwaves.com/fmdb.html

- Re-entry Time Line -

If the re-entry goes as planned, the time line will be as follows:

Event Time UTC EDT CDT MDT MST/PDT*

Arrives over West Coast 12:14 8:14 7:14 6:14 5:14

Enters Nevada 12:15 8:15 7:15 6:15 5:15

Overflies "Four Corners" 12:17 8:17 7:17 6:17 5:17

Overflies Dallas, TX 12:21 8:21 7:21 6:21 5:21

Overflies Mississippi Coast 12:24 8:24 7:24 6:24 5:24

KSC Touch down 12:37 8:37 7:37 6:37 5:37

(* Much of Arizona is on Mountain Standard Time [MST].)

More detailed predictions containing look-angles at best visibility
for various locales are available at the end of the document found at:

http://shuttle.nasa.gov/sts-78/orbit/orbiter/sighting/sighting.html

Note that only observers west of Utah will have a decent chance at
visually sighting the Shuttle, due to lessened interference from
sunlight. The sonic boom, however, may be detectable to everyone
in the vicinity of the re-entry track.

- Last-Minute Sources of Information -

Weather conditions at Kennedy may cause last-minute postponement of
the landing. The following Web site provides weather status:

http://www.ksc.nasa.gov/weather/weather.html

Last-minute information about the Shuttle's re-entry/landing status
is available at:

http://shuttle.nasa.gov/

Also, last-minute schedule changes are usually reported on the hourly
national news on CBS Radio affiliate stations, on CNN, and on NASA TV.

I would especially like to hear of any successful (or unsuccessful)
attempts to exploit Shuttle re-entries for DXing purposes. I will
happily summarize them and report the results on these very same
newsgroups. You are welcome to contact me at the e-mail address below.

Good luck!

: MUCH more benficial that being forced to learn a dead language, CW.

I'm proficient in Latin, Greek and Hebrew, so perhaps I have a penchant
for dead languages...

: time was wasted. I want HF voice priveledges. CW is irrelavent and outdated.

Here's why CW is relevant. As a 21 year old, I don't exactly have $3000
to spend on an HF rig. So I'm learning CW so I can get myself a Ramsey
QRP receiver and transmitter, and get on HF for about $100 US.

Besides, those nifty QRP rigs are nice and portable, which opens up lots
of possibilities. The receiver is powered by a 9V battery, and all I
need is to figure out how to power the transmitter by solar panel, and
the possibilities really open up. ;-)

As an aside, manufacturers need to start producing low-cost all-mode VHF
rigs, particularly 6 metres and 2 metres, so that no-code hams like
myself can get a taste of DX, which will encourage us to learn code and
buy those $3000 HF rigs...

: Easy! Kids today have a very short attention span! If the picture does
: not constantly flicker, they fall asleep. The Nintendo generation is
: lost.

Actually, it just seems to you that they have a short attention span
because they've learned how to tune out people like yourself.

When you tell young people how worthless, lazy, etc. their generation is,
do you really expect them to pay attention to you? They've got better
things to do, like trying to find a job. Unlike your generation, young
people today can't get a good job right out of high school, nor even
after years of post-secondary education.

>to spend on an HF rig. So I'm learning CW so I can get myself a Ramsey
>QRP receiver and transmitter, and get on HF for about $100 US.

>Besides, those nifty QRP rigs are nice and portable, which opens up lots
>of possibilities. The receiver is powered by a 9V battery, and all I
>need is to figure out how to power the transmitter by solar panel, and
>the possibilities really open up. ;-)

Good for you! I am a 16 year old and the QRP bug bit me. I am a
General (Soon to upgrade), however there are a lot of kits out there
for QRP. It sure proves that an amp is not necessary! It also gives
people a chance to build their own equipment. Most Hams today would
rather fill out a check or give out their credit card #, unpack the
box, plug the rig in and call "CQ". They don't want to put any effort
into their equipment, which is a HUGE rush when you have a QSO with
something you were soldering together the night before.
>As an aside, manufacturers need to start producing low-cost all-mode VHF
>rigs, particularly 6 metres and 2 metres, so that no-code hams like
>myself can get a taste of DX, which will encourage us to learn code and
>buy those $3000 HF rigs...

Good for you, again. It is nice to see you are putting a ton of
effort into the hobby itself. Don't stop when you upgrade! Climb to
the top of the ladder! I wish you luck.

Steve,
You are confusing LITTLE LEOS with BIG LEOS. They are too entirely different animals. Teledesic HAS frequency allocations (huge ones!) at 19 GHz and 29 GHz. For your amusement I have provided a large number of references below that you can read and check yourself. And there are many more reference than just those cited below.

Here is more information posted originally under a different heading:

"It is almost funny - one of the most accurate and reliable sources of Amateur Radio information <satirical comment about you know who!> - posts a note with comments about Kenwood sales practices and Microsoft and the computer industry allegedly trying to grab Amateur Radio bands - and most everyone takes his word for it!

Even funnier is that information refuting most of these claims is easily available right here on the Internet. To refute allegations that Teledesic is one of the LEO's trying to "take over" the Amateur bands, I spent all of about 5 minutes using DEC's AltaVista search engine. Here is some of what I found.

1. The Teledesic Press Release
You can read the original press release form Teledesic announcing their plans for a "Big LEO" high speed data network based on 840 orbitting satellites. According to the story, cellular phone pioneer Craig McCaw, and Microsoft founder Bill Gates, made founding investments in Teledesic. In both cases, these investments were made by the individuals and are not connected to either McCaw's cellular/SMR properties nor Bill Gates' Microsoft Corporation. McCaw and Gates made personal investments as founding investors in Teledesic.

You can read the press release:
http://www.att.com/press/0394/940321.pca.html

2. Teledesic is using frequencies at 19 GHz and 29 GHz.
Teledesic is a "Big LEO" operation, not a "Little LEO" - the "Little LEO" companies are the ones who wish to consider use of the Amateur allocations for their 2-way messaging systems.. You can read about the frequencies that were allocated to Teledesic at:
http://techweb.cmp.com/techweb/cwi/current/155news1.html

3. FCC Documents
You can read at least one of the related FCC documents concerning Big LEOs online at: http://www.fcc.gov/Bureaus/Wireless/Notices/fcc95287.txt

4. Bill Frezza's article comparing Big and Little LEOs
Bill Frezza is formerly a marketing manager at Ericsson; former
President of the Personal Computer and Communications Association;
and current wireless industry consultant and pundit, writing columns
for several publications. You can read his column on Teledesic at:
http://techweb.cmp.com/techweb/nc/615/615frezza.html

And now, shame on those of you who bought you-know-who's silliness
hook, line and sinker and didn't bother to even make a modest effort
to check his wild allegations. "

Bill,
You didn't mention why Icom offers no support. I have always found
their support to be excellent. Just call Icom America and ask for tech
support (they are in Washington state).
If they can't or won't help you, seems like a RS miniature relay in
the audio line / PTT circuit would be a quick and easy way to
disconnect receive audio while you are transmitting.

4989. Morse Code in Music

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-07 00:00:00 UTC
From: ka3vsp@voicenet.com
Message-ID: <4romlj$bl3@goodnews.voicenet.com>
Source record: 221554

DISCLAIMER
The following is presented as non-commercial,
non-profit information only.
==========

MORSE CODE in MUSIC

While listening to your favorite music, don't be
suprised if you hear those strange and annoying
sounds of that terrible Morse code!

Case in point, on Joe Walsh's latest solo album
"Songs for a Dying Planet" is a song titled
"Vote For Me". The song is preceded with Morse
code which pounds out "REGISTER AND VOTE FOR ME AR".
Brian, KF2HC, states that the same message appears
on Joe's first album "Barnstorm" in a song titled
"Mother". Joe holds an Advanced class Amateur license.

Another album worth noting is Roger Waters' album
"Radio Kaos". This album is filled with Morse messages.
Most of the code is underlying the haunting music and
very difficult to copy. The album's cover is littered
with Morse code characters. The album's song titles are
all spelled out in Morse Code!

The rock band RUSH has a song title "YYZ" on their album
"Moving Pictures". This songs starts out with a heavy
percussion belting out "YYZ" and then followed by bass and
guitar blaring out the same. Well, the characters YYZ are
the beacon identifier for the Toronto International Airport.
The inspiration for the song came from Alex Lifeson,
the guitarist for the band, who holds a private pilots
license.

Carter Bennett, KI5SR, brings to my attention that there is
badly formed Morse code on Kate Bush's album "Hounds of Love".
Carter informs me that the song "Watching You Without Me"
contains the code "SOS". It was also reported that this track
has some RTTY going in and out of tune. KI5SR continues with
information regarding the album "Saving the Wildlife" by
Mannheim Steamroller. He states that there is a track on the
album which sounds too much like "CQ" in Morse.

Charlie, N2JQA, brings to my attention that there is
Morse Codeon Ronnie Montrose's album

(Elektra 1982 EI-60034) "GAMMA 3". The song "Stranger"
contains Morse Code which spells "STRANGER".

Wayne, WA6MPG, states that in 1967, the band
"PEARLS BEFORE SWINE" recorded a song with an adult-rated
CW message in it. The song was titled "MISS MORSE".
The song is said to have vulgarities in it spelled out
with Morse Code.
The album was titled "ONE NATION UNDERGROUND".

Randall, KE0YG, provided the following info abt Morse Code
in the computer game called "RED STORM RISING" by Microprose.
Randall says that in the opening credits there is music
which contains Morse Code which spells out
"THE RUSSIANS ARE COMING" at abt 18 WPM.
Randall says that he can confirm this on the C-64 version
and he believes that the IBM version plays the CW message
in the theme song.

Craig, VK3CRA, informed me of a TV show called
"INSPECTOR MORSE". Craig has never seen the show but,
from info gathered, states that the inspector's name is
never given in the show. It is alleged, however,
to be contained in Morse Code which is played as part of
the show's introductory music.

Howie, N2WX and Mark, KM6XU, informed me that
"Radioactivity" by Kraftwerk has lots of good Morse code
in it. Mark also states that the band Missing Persons has
a song with some code in it but Mark didn't supply any
info on the song.

A message from John, NI6D, brought to my attention of
pseudo Morse code in the song "Radio Silence" on
Thomas Dolby's album titled "The Golden Age of Wireless".

Dave, N0DET, adds that there is code in the song
"Planet Claire" by the B-52's. In the intro to
"Planet Claire", a kind of Spy vs. Spy mood is created
by the music, and plainly audible CW. The Morse code says,
"NAKS DE CFH I I ZKR F13395 5156 AS 662 ....,", then fades
to music. Dave believes that 'NAKS' and 'CFH' are commercial
station callsigns.
More information pertaining to the code comes in from Ron,
VE3RYN. Ron says that "NAKS" should be "NAWS" which stands for
'North Atlantic Weather Station' and "CFH" is a CDN military
ship/shore station located near Halifax, Nova Scotia.

Michael, W9OJ, claims that the words "love you" are spelled
out in morse code at the end of the "Iron Butterfly Theme"
by Iron Butterfly. This song is on their first album "Heavy"
and is also on the double album titled "Rare Flight".

Ian, VK2IAQ, writes in with information stating that the
UK rock band 'Barclay James Harvest' has two songs which
contain morse code. Ian states that the song
"Nova Lepidoptera", a sci-fi song from the 1977 album "XII",
starts off with "UFO" repeated in slow morse code.
Also, the title track of the album "Ring of Changes"
starts with the title sent twice in morse code.
John Lees, the lead guitarist, is a licensed amateur
operator in the UK.

Bill, WA6ITF, reports some really good Morse code on the CD
"SEEK YOU" by Andrew, G3WZZ, and Lissa Huddleson.

Phil Kawa, KA1WJQ, claims to be the first musician/amateur to
compile 43 Morse code characters set to music and rhythm in his
publication titled "Rhythm of the Code" Morse Code Music.
For more information on "Rhythm of the Code", contact Phil
via e-mail at pkawa@ix.netcom.com.

Well, that's abt it for now. TNX to all who have provided me
with information on this subject es TNX to all who have
inquired abt the subject.
Until next time, KEEP POUNDING BRASS!

Hey Mike, I admitted *half* the pro-code-testers were joking. :-)
Who do you think has been pulling whose leg for years now?

A more believable plot would have been to have the daughter ship's
shielding ability linked to the mother ship so that once the mother
ship was destroyed, the daughter ships lost their shields. Then the
bomb was all that was needed 'cause the virus idea was really hokey.
Most people have trouble just getting their PC RS232 port to work.

73, Cecil, W6RCA, OOTC (not speaking for my employer)

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, KA2AEV, N5UD, KE5GA, W5IJU & Island News, AA7VB, K9AU, C53HG/WA1JBB CT1EEB, EA3BT, EY8MM, DF4RD, DJ7IK, DL5EBE, G3SXW, G4BUE & DX News Sheet, G0AZT, I4EWH, IK1TZO & Island News Bulletin, IK6CGO, ON4BDS, VE6OA and ZS1AFZ for the following DX information.

3DA, SWAZILAND. DXNS reports that Dave, WJ2O, is planning an African tour in October to include 3DA.

5A, LIBYA. Andy, DJ7IK, reports that a planned operation is in the works by Brendan, G0UCT, and that an announcement will be made when all things are ready to go. Also, Andy mentions he is planning a multi-station contest operation from 5A1A next year. He has met the 1st operator of 5A1A, Ali during the "Ham-Radio-Convention" in Friedrichshafen and has invited Ali to his home before going back to Libya. Andy will provide some information about 5A1A and the actual situation there within the next weeks.

5V, Togo (Update). Rodger, G3SXW, states the VooDoo Contest Group is now optimistic that plans for Togo will succeed. They hope to operate Multi/Multi in CQ World-Wide CW Contest on November 23-24th. Their team took first-place in the contest as 9G5AA (in 1994) and TY5A (in 1995) and their goal is for a third straight win. They have requested the callsign 5V5A. The team consists of AA7NO, G3SXW, G4FAM, GM3YTS, K5VT, K7GE, KC7V, N7BG, W6RGG and WB7SRW. They plan to establish six stations and 17 antennas in Lome, the capital of Togo, with increased efforts on LF antennas. QSL Manager will be Bill Ferguson, GM4AGL. The trip will include road journeys to collect equipment stored in Abidjan (TU) and Accra (9G). They also hope to operate with personal callsigns just before the contest on WARC bands and maybe 160 meters. More details will follow, including the address of a remarkable page on the World-Wide Web now being developed for the team by Warren Hill, KF7AY.

8Q, MALDIVES ISLANDS. Josep, EA3BT, and his wife Nuria, EA3AOK, will be active October 22-31st, using the callsigns 8Q7OK and 8Q7BT, respectively. Their main goal is to take part in the CQ WW DX SSB Contest. They plan to be active on SSB, RTTY and do their best on CW (as they are not very experienced in this mode). Activity will be on all bands including the WARC bands. QSL via EA3BT, Josep Gibert, P.O. Box 366, 08800 Vilanova i la Geltru, Spain.

CY9, ST. PAUL ISLAND. A report received indicates that Don, VE1AOE, and Ken, VE1RU are planning to go here for a mini DXpedition some time in September.

D4, CAPE VERDE. Start looking for Veronica, IK3VAW, to be active for several weeks beginning July 21st. Activity will be on all bands but mostly SSB around 14240 kHz. No callsign was given but QSL to home call.

DU2, BABUYAN ISLANDS (Philippines). The "Islands News" reports Jim, DU2/N3GKY, will be active from here (IOTA OC-092) July 12-19th, as DU2INT. Activity will be on 80-10 meters with operations probably on SSB only, running 100 watts and a wire antenna.

DX WEB PAGE....
Al Girard's, VE6OA, home page (http://www.compusmart.ab.ca/agirard) contains the VE6OA's DX Links at:
http://www.compusmart.ab.ca/agirard/DXLINKS.HTM

FG, Guadeloupe. F6FUM will be active (probably as FG/F6FUM) from July 7-14th. There will also be activity from Les Saintes (NA-114) from July 15-21st, from Marie Galante (NA-102) from July 21-28th and from La Desirade (NA-102) from July 29-30th. He will be accompanied by FG5HR and both will be active on CW and SSB.

IOTA NEWS.....
NA-119. Roy, AB5EA, will be active from Timbalier Island as AB5EA/p on SSB and AB5EB/p on CW on July 20-21st. This island is located in the Louisiana State Centre Group. Check all IOTA frequencies.

NA-138. Vance, W5IJU (Editor of the Island News), will be active from Amelia Island during the IOTA contest from here. This island is located in the Flordia State East Group. The callsign to be used will be W5IJU.

EU-038 and EU-146. In the week of August 24 to 31st, David, ON4BDS, and Tobi, DL5NEJ, will be active from Texel Island (located in the North Sea Coast North Group) and Duiveland Island (located in the North Sea Coast South Group). Activity will take place on all bands, except 160 meters, with operations on SSB and CW, most likely RTTY too. Look for them on IOTA frequencies. QSL is direct via the 1996 callbook adress or via bureau to ON4BDS only.

EU-041. Gianni, IK6CGO, will sign IM0/IK6CGO/p from Maddalena Island starting next Sunday morning July 14th. On Sunday afternoon July 14th, he will then travel to Caprera Island (same IOTA) using the same call. QSL via ARI-bureau or direct to his home call, Gianni Bonfigli,

C.P. 19, I-62029 Tolentino (MC), Italy.

NEW ORLEANS INTERNATIONAL DX CONVENTION slated for August 30-31st, now has a its scheduled events available on the World Wide Web! It can be viewed at: http://www.sousystems.com/ke5ga/ke5ga.html
They will be updating this information at least once every two weeks with biographies of the presenters as well as a synopsis of their presentation. Also, Kan Mizoguchi, JA1BK, has been named "DXer of the Year". The convention is drawing near so call the host hotel, The Royal Sonesta, in New Orleans to reserve your rooms at the discounted convention rates.

P4, ARUBA (on the satellite - RS12). As mentioned last week, Dennis, AA7VB, will be active as P40Z (see OPDX.260 for more details). He has now announced he will operate on the RS 12 bird as frequently as possible between July 11-16th. His windows are:
July 11th - 2048-2105 and 2235-2250z
July 12th - 0806-0819, 0950-1005, 1935-1947 and 2117-2133z
July 13th - 0833-0848z
IARU CONTEST
July 14th - 2029-2044 and 2214-2229z
July 15th - 0744-0800, 0928-0944, 1915-1928 and 2055-2112z

P5, NORTH KOREA. A rumor started earlier last week from the JA3CMD Contest Reflector, states that Sanyi, HA7VK (aka XU7VK, XU95HA) will be on for 10 days from P5 starting 0000z on July 6th, using the callsign P51VK or HA7VK/P5. The rumor also stated that HA7VK will only be running 100 watts and will operate CW/SSB on 14 and 21 MHhz only. As this bulletin was being prepared (Sunday morning at 1530z), there has been no sign of Sanyi. BUT a message replyed from packet radio onto the InterNet's DX Reflector from Laci, HA0HW, (HA7VK QSL Manager) states HA7VK will get an answer to his permission request from PTT to operate on coming Monday. (KYFC!!!!!!)

QSL INFORMATION (Announcements and Corrections).....
Frank, K9AU, reports he is now the stateside QSL Manager for Vlad, EW3LC.....

Fausto, I4EAT, is receiving a lot of QSLs via bureau for IQ4A, but although he is member of this contest team, he is NOT the QSL Manager. The right managers are: IK4QJH for SSB and I4LCK for CW.....

New address of UK-QSL Bureau (UK9AA information): Uzbek Radioamateur Federation, Box 0, Tashkent 700000, Uzbekistan, CIS

TY, BENIN. Glenn/W6OTC, Eddie/G0AZT, Steve/KE6FV and Ray/WF1B, will be signing TY1RY as a Multi/Single entry in the 1996 CQ WW/DJ RTTY Contest, September 28-29th. There will be some CW, SSB and WARC band activity before the contest, if possible, providing all antenna erecting is successful. QSL all contacts to: Eddie Schneider, P.O.Box 5194, RICHMOND, CA 94805 USA. Please include an SASE or SAE and return postage. Do not send cards via TY or any other bureau.

UK, UZBEKISTAN. Two contest callsign were issued recently in Uzbekistan: UK7F operated by UK8FF (QSL via W3HNK) and UK0A operarted by UK9AA (QSL via DL4YT/K4YT direct). Both stations are planning activity in upcoming big contests.

V51, NAMIBIA. Gary, C53HG/WA1JBB, has informed OPDX that his three year operation as C53HG is now history and all his antennas are down. He will be moving on to V51 Namibia, July 17th. Gary can't say how much he enjoyed operating as C53HG and states his great QSL Manager Mac, W3HCW, has handed out over 20,000 QSL cards so far, but his QSOs numbered over twice that. He hopes to be operational in Namibia on HF by September, so look for him then.

V6, ANTIGUA. Just a reminder that Team Antigua will activate V26B in the upcoming WRTC/IARU RadioSport Games on July 13th. There has been a report that the team has been reduced in size of operators. They will be entering either the Multi/Single or Multi/Multi catagory and that the catagory decision will be made by the crew upon arrival in Antigua. They will be active for a short time both before and after the contest on all bands and modes. The members and QSL routes for this trip will be:
V26B - Sam Harner, QSL via WT3Q
V26E - Darrel Neron, QSL via AB2E
V26U - Bill Hudzik, QSL via WA2UDT

VK0, MACQUARIE ISLAND. Reports from Germany state Warren, VK0WH, will be QRT for the next 2 or 3 weeks due to antenna problems. The extreme weather conditions on Macquarie Island and salty water caused a strong corrosion of his antennas. Due to short days during the Antarctic winter season, it will take 2 or 3 weeks for him to repair what has been destroyed. We will keep you informed when Warren becomes active again.

ZK1, SOUTH COOK ISLANDS. Just a reminder to look for the 8-land operators (AA8U, AG8W, K8MJZ and KA8KZJ) to be active July 11-21st. Callsigns to be used are ZK1AAU, ZK1MJZ and ZK1AGW. The will operate from Rarotonga Island as ZK1AAU in the IARU Contest. QSL via AA8U.

ZS8IR (Marion Island Update). Chris, ZS8IR, is reportedly very happy on the island and his total QSOs to date are 3,670 and has worked 113 countries; 48 ITU zones and 35 CQ zones.

4993. Repeaters for Califronia-Arizona trip

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-07 00:00:00 UTC
From: mjr@crl.com
Message-ID: <4rpa8g$mk7@crl.crl.com>
Source record: 221558

I'm traveling through central Calif. to Arizona (Flagstaff) in a couple of weeks. I have two bands to operate mobile, 2M and 70cm (I also have 1.2G, but we'll ignore that for now).

I also have a repeater directory, but there are literally hundreds of repeaters in those bands covering the area I'll be going through, and the directory does not indicate which are high level machines and which are not.

Can any one help me find a dozen or two dozen repeaters in the area from Stockton to Bakersfield, Barstow, to Kingman Az. and then Flagstaff? My criterion are:

1) Friendly (open or closed so long as they will talk to a visitor)
2) High level wide coverage
3) Someone listening (I will be making the Bakersfield Flagstaff part of the trip in the middle of the night)

I don't need many. Just enough to keep me company as I travel back and forth.

Email me or post here, I will watch.

Thank you

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 07/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 07 JULY AND FORECAST FOR 08 JULY - 10 JULY

1A. SOLAR SUMMARY
Activity: Very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 72/8

GOES satellite data for 06 Jul
Daily Proton Fluence >1 MeV: 5.5E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 2.5E+07 (normal)
X-ray background: A1.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
08 Jul 09 Jul 10 Jul
Activity Low Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 08 Jul: 71/6
COMMENT: A solar region is showing rapid growth, flare activity
is possible.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 06 Jul
Learmonth 6 2321 2211
Fredericksburg 8 6
Planetary 10 5

Observed Kp for 06 Jul: 0212 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
08 Jul 5 Quiet
09 Jul 5 Quiet
10 Jul 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
07 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
08 Jul Normal Normal Normal
09 Jul Normal Normal Normal
10 Jul Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
07 Jul 12

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
08 Jul 15 near predicted monthly values
09 Jul 15 near predicted monthly values
10 Jul 15 near predicted monthly values
COMMENT: Spread F observed near dawn at Darwin. Blanketing sporadic
E observed during local night at Hobart.

I have put up a page with links to information about the Yaesu FT50R dual band HT.

URL is http://members.gnn.com/hca/ft50

The page currently has links to Yaesu's information and text files containing archived USENET articles about the FT50. The articles include gripes, mods, and general information.

If you have any additions, please email them to me at atla0001@umn.edu

Look for the messages:
UVV: Daily "CFVs in Progress" status report
UVV: Daily RFD, PQ, and CFV status report

which apparently are posted every day to see the status of voting for
Boat Anchors or any other group. It seems to take a long time to move
through the process. If the group you're interested is on one of these
lists then you know it's in the system. If it isn't then it might somehow
have been dropped and you might consider taking some action.

I have just acquired a couple of Standard Radio UHF handhelds
Model HX240U(AB) at a local hamfest. They display the letters CL
when turned-on. These are commercial HT's. No keypad, just 4 buttons
across the top of the front plus light and monitor buttons.

Any help with information (programming/manuals/etc) on these units
would be greatly appreciated.

Thanks,
Larry Rothman VE3LRI

5016. Modes Used for EME

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-08 00:00:00 UTC
From: Chris Broadbent <cfb@bga.com>
Message-ID: <31E1251D.499A@bga.com>
Source record: 221455
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.digital

Doubtless this will stir up the usual hornets' nest, but that is not the purpose of the question. I am genuinely curious.

From what I have read, EME is perhaps the most challenging DX activity WRT phase distortions, SNR, fading, etc. The Moon's continually changing radial velocity, its convex surface, low reflectivity and great distance present all sorts of interesting challenges.

I read that EME operators use just about every trick in the book in order to make successful contacts. They are very much on top with DSP's, real time Fourier analyses, highly directional antennae, ultra sensitive receivers, high power transmitters, etc.

Yet, with the much vaunted advantages of the various modern digital modes, CW is the EME operators' choice of mode. Why is this?

Again, this is a real question. It is not meant as flame bait and I hope it won't trigger another round of the CW vs Digital argument.

Cheers,

Chris (cfb@bga.com)

In article <960706015145197 00@saloon.bcbbs.net>,
clinton.peebles@saloon.bcbbs.net says...
>
>Does anyone have the QSL info for N900 HZQ?
>
>It's a special call for the Olympic games.
>
>Please e-mail cpeebles@saloon.bcbbs.net

Hello,

To QSL people using those special call for the Olympics just
take the "00" out of their call and qsl directly to them
(unless they say otherwise). For example, N900 HZQ is really
N9HZQ. Looking in QRZ that person is:

Name: JEFFREY L TUCKER
Addr1: 2920 SONATA DR
Addr2: QUINCY IL 62301

I have worked several people using those special calls. They
are either using "00" or "96" in their call or /00 or /96 at
the end of their call. I have been entering these calls
as they would appear in the callbook in my logging program
and then using the comment feature to indicate what they used
on the air. Hope that helps.

73 de kc4iyd
Nancy
kc4iyd@einstein.lerc.nasa.gov

P.S. I had thought that only people in Georgia was using
the special Olympic call so either this person hasn't
updated his address or was in GA when he made the contact.
If I am incorrect, let me know.

Does anyone have the MARS/CAP mod for the new FT-8000?

Would much appreciate it!

Thanks in advance -

Ty

I thought maybe he meant one of those ATMs but I don't understand why
you would want to put a virus there. Unless, you could make one that
gets everybodies account info and transfers funds automatically to a
swiss bank acc... well, anyway. In the movie, we had access to some of
thier technology, so, it was possible to figure out how the processors
in thier computerized control system worked which made it easy to make a
virus to hack them. I know of several tennage hacks that could probably
do it given a little time. I know, I know, it is just a movie!

To all Chicago area hams...

On Friday, July 12th, the Suburban Technical Amateur Radio System (STARS) will have a special meeting to celebrate its 20th anniversary.

We're calling it the "Summer Festival with STARS". Included in the festivities will be a raffle for great door prizes. Grand prize is a Yaesu FT-50R Dual-band Handi-Talkie ("High power" [5 Watt] version). All licensed amateur radio operators are welcome. Other activities are also planned. For details, see the STARS World Wide Web site at:

http://www.niia.net/~sbear/stars.htm

Again, all licensed hams are welcome. Everyone who comes will receive one free door prize ticket. Additional door prize tickets will be available for purchase.

Note: The winner of the handi-talkie must be a licensed amateur radio operator. Please come prepared to show your amateur radio license in order to collect the tranceiver prize if you should win.

When and where?

Friday, July 12th at 7:30 PM

First Chicago Bank
SW corner of 151st St. and LaGrange Road (U.S. Route 45)
Orland Park, Illinois

>Again, this is a real question. It is not meant as flame bait and I hope
>it won't trigger another round of the CW vs Digital argument.

Chris, a recent discussion on moon.net (a mailing list) is very
enlightening in this regard. A small number of people interested
in EME are working on systems to allow those without the space
for huge antenna arrays, or the cooperative neighbors who'll tolerate
legal limit amplifiers around their consumer electronics, to
sucessfully make EME contacts using the advantages of modern
digital signal processing (and the modulations and codings best
suited to DSP application). KA9Q, W3IWI, and a few others have
proposed systems which would allow the typical Oscar class station
to do EME without the cooperation of a Big Gun like W5UN on the
other end.

(Note, traditional EME can be done now with an Oscar class station
if one of the big government dishes (or one of a *very* few big amateur
arrays) is used on the other end. The goal of the new breed EMEer is
to allow contacts *between* Oscar class stations with one or two yagis,
100 watts of power, and some modern coding and signal processing.)

The current favorite candidate emission seems to be a low baud
multi-tone FSK system (somewhat similar to the coding used by
the Navy for VLF comms with submerged subs), though various SS
emissions and other methods are being considered. The typical
EME contact exchange can be coded into 68 bits. There isn't a

lot of content being exchanged here, so very low baud can be used to advantage, and heavy use of FEC is possible. Tom wants to use his "most accurate clock" as a timing source so that the clock extraction problem becomes moot. This has the potential to gain 15-20 db over methods without a precision timing reference. (Voyager works this way, using ultra-precise oscillators to eliminate the clock recovery problem.) KA9Q has shown that the necessary signal processing can be done on an ordinary PC with a sound card. No exotic DSP hardware is needed, if proper codings are chosen (he's using the Fano decoding algorithm). Check his web page for a demo.

These proposals have been resisted *fiercely* by a number of traditional EME operators. Their argument in essence is that it isn't *really* a contact unless they do it by hand and ear and brute force. One commented that checking the screen periodically to see who you had worked wasn't *real* EME. Much of the allure of EME for some of the traditional operators is the huge array, the big amplifier, and digging single Morse characters out of the noise with headphones and ears. A more elegant solution doesn't appeal to them (which is fine), but they also don't want others to obsolete them by using the more elegant approaches (which isn't fine), and would deny credit for contacts made with modern modulations and codings.

The current EME community is a small one (mainly because of the brute force approaches being used which sharply reduce the number of amateurs who can participate given the realities of modern urban living), so such a sharp repudiation does tend to reduce the chance for more modern methods to reach critical mass. (Since so very little content is exchanged, the reason to do EME is for the credit gained for the contact, IE it's like other Dxing in that the fact of the contact is all important and the content of the contact is irrelevant. Thus, if credit is denied for modern digital contacts, few of the "ultimate Dxers" will want to compete.)

A side note. During the 1950s and early 1960s, the US Navy used EME to transmit multiplex RATT from their ships to US shore stations. This was ordinary 60 WPM FSK Baudot on 4-plex or 8-plex circuits with no special coding. They used transmitters with 17 db more power than amateurs can run legally, in order to have an acceptable error rate. With modern codings, and a precision timing reference, amateurs can overcome that 17 db power advantage today and exchange real content via EME if they choose. But they won't do it with headphones and hand keys. Of course few of the current "ultimate Dxers" are interested in such a thing. Content is irrelevant to their game.

I think it would be more interesting, and of more significance to the amateur service, if content were relevant. In fact, that holds for Dxing in general, it would be better if the exchange

had to include significant original content. That way, when the aliens attack :-), the Dxer could do more than just via for a QSL card with a stylized exchange. He could actually be practiced in passing significant information.

: I plan on putting in a combo antenna where the AM/FM one is now. I
: don't care about getting out because I mostly listen.
:
: If I put out 25-50 watts from the 2m antenna a couple of feet away
: will it hurt the CB or standard radio even though the freqs are a lot
: different. I am also wondering about putting a 2m and a hf antenna in
: my attic. How much separation is required between antennae on
: different bands?

Well, that's almost the exact setup I have (only it's an Alinco DR-610 dual band). The CB is hooked into the car antenna with a splitter, and the 610 to a Larsen glass-mount (sorry, Gary) which is about 3 feet from the AM/FM antenna, and about the same elevation.

I haven't found any problems with one radio interfering with another. My bigest fear was that the 2m Ham signal would klobber the car FM, and that hasn't happened. The only problem I've had is that I sometimes get a muting of the Tape player audio when transmitting at 50w on 2 meters. No, I don't know why it's only sometimes, but it doesn't seem to hurt anything, and it's actually rather useful. My guess is that the RF is getting into the tape playback front-end - the opening is on a direct line of sight to the antenna on the rear window.

Now, as for the 2m and HF in the attic, my bigest problem is that the HF tends to interfere with the 2m receiver. My antennas are on the roof, at about the same level (2m beam is maybe 3' higher than the HF dipole). When trying to work RS-12 mode K satellite (tx on 15 meters, rx on 2m) I have to crank the HF power way down. It's a balance between not being heard and not hearing.

Good luck,

Greg KO6TH

Yeah, but as with our astronauts, the requirement is routinely waived.
Since they had been scoping us out for a while, they'd adopted AX.25
as their standard signaling method (big security hole there as they
found out).

>BTW...how did Jeff Goldblum and the Fresh Prince break the shield? A
>transmitter and a computer...packet?

Sure, see security hole mentioned above, but that's also why the aliens
couldn't use their computers to copy Morse, their bootleg Pentiums were
approximating their decoding algorithms. Think about it, they were using
hardware and an OS which were easily amenable to hacker attack from a cable
guy. The truth is, they were so frustrated by Windoze 95 hangs and crashes
that they invaded Earth to pay Bill Gates back for that abomination (and to
pick up the latest Infomagic release of Linux). They weren't that alien
after all, just pissed off victims of Microsoft like the rest of us, albeit
with neat rayguns.

So you see, it was really Bill Gates who saved us all. Thanks to his
buggy (in Microsoft speak, undocumented features) software, the aliens
couldn't keep their systems secure. (You didn't think Gates made all
that money just selling to Earthlings did you?)

you didn't mention what radio you run but your problem doesn't is not in the mike, it's a function of your radio. there
must be an on off function within the radio. i have the same mike running a 741 tribander. I have set up the DTMF so
that when i hit the first key, it keeps in the TX mode, so I don't have to hold the PTT, but I had to set up the function
within the radio.

Have to be a 'mod'. The radio is working as it was designed to work. I
don't have a service manual, so I can't tell you how hard it would be to
mod, but it's probably do-able.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 JULY AND FORECAST FOR 09 JULY - 11 JULY

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 82/23

GOES satellite data for 07 Jul
Daily Proton Fluence >1 MeV: 1.2E+06
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.5E+07 (normal)
X-ray background: A1.8
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Jul 10 Jul 11 Jul
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Jul: 82/23
COMMENT: Solar region continues showing rapid growth, flare
activity is possible.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 07 Jul
Learmonth 11 2233 3322
Fredericksburg 11 12
Planetary 8 9

Observed Kp for 07 Jul: 1341 2321

2B. MAGNETIC FORECAST
Date Ap Conditions
09 Jul 5 Quiet
10 Jul 5 Quiet
11 Jul 5 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY

Latitude Band
Date Low Middle High
08 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
09 Jul Normal Normal Normal
10 Jul Normal Normal Normal
11 Jul Normal Normal Normal
COMMENT: SWF possible on daylight HF circuits.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
08 Jul 10

Observed Australian Regional MUFs:
near predicted monthly values

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
09 Jul 15 near predicted monthly values
10 Jul 15 near predicted monthly values
11 Jul 15 near predicted monthly values
COMMENT: Short wave fadeouts (SWF) possible on daylight HF circuits.

That implies I am somebody! But a stupid somebody, as I could just amble
off to TIN and use a single "c" to do the job more efficiently. That
way I will wear out my "c" key over a longer period of time.

P.S. Whatever happened to "W2AP"? He was one of the Digicom pioneers
for Commodore packet radio users.

>>subject contradicts your assertion.

>Please provide a reference to these polls of future generations.
>The methodology interests me (I'd like to ask them a few
>questions about stock prices, for example.)

In context of the original statement, the "future generation" refers
to kids who are hams and not future hams who are not yet even kids,
so your sense of wonderment was falsly triggered. It is also assumed
that these polls are not the sole domain of the middle aged and that
young hams do participate.

As for your more materialistic inclinations, late night TV does
identify various Psychics who may be able to make those predictions
for you, for a sum of course, if you're interested in that sort of
thing.

Toured the O'Brien today, very impressive piece of restoration work. The ship's amateur call is W6PW-MM and the radio operator's call (Name is Bob) is KB6YYL. He said they are not always on the air but try to be on the air hourly on 14310 and 7245. They also call the Lane Victory (a Victory ship in California) at 10:30 am (PDT - 17:30 UCT) on 7232. Hope this helps.

5057. VHF Grid Info For Mexico Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-08 00:00:00 UTC
From: leigh@rain.org
Message-ID: <4rq5ct$9gj@news.rain.org>
Source record: 221581

On July 6 I worked Rafael/XE2OR on 6 meters: he was in grid DL85 in Mexico. Approximately, where is DL85, anyway?

He was on 50.125, and could not hear my 10 watts of SSB into a low-gain vertical, so I switched to CW, and worked him cross-mode. CW still has its uses, even on VHF.

Ever since a strong & wide opening on the Saturday of last Field Day, 6 meters has been very quiet here in Southern California, FWIW.

5058. NEW JULY HAM POLL QUESTION NOW ON-LINE>>http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-08 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0707962221190001@host01.cyberg8t.com>
Source record: 221582

These are the most recent Ham Poll results as of July 7, 1996

The question for July 1996:

The ARRL has started a massive letter writing campaign. This campaign is directed at a proposaloffered by the "little LEO's", the low-earth orbiting satellite industry. Their proposal would have the FCC support a position at the International Radiocommunication Conference (WRC-97), that would allow the 2 meter and 70 cm bands to at be shared jointly by both the amateur radio community and the cellular phone industry.

The question I am asking this month is: "Do you support the ARRL view that this proposal is a serious threat to Amateur Radio, and needs to be aggressively opposed?"

If you believe this proposal is a significant threat to the future of ham radio, and should be dealt with
aggressively, check (depending on your level of support) either "Strongly Agree or Agree". If, on-the-other-hand, you do not believe this proposal has the slightest chance of being approved and you therefore see the ARRL's response as extreme, check (depending on your level of disapproval) either "Strongly Disagree or Disagree". If you have not formulated an opinion on this issue yet checkthe "Not Sure" box.

The results:

Strongly Agree |********** 21
Agree |*** 3
Not Sure |* 1
Disagree |* 1
Strongly Disagree |***** 5

Total votes displayed: 31
check the "Not Sure" box.

Mark - The O'Brien is an historic ship circa WWII which is the only that successfully made the return crossing to Europe for the 50th observence. The plethora of old timers that restored it to service deserve medals of some sort. Amazing feat. The Lane Victory (ported in L.A.) pooped-out somewhere along the Pacific/Mexico coast.

I surmise you toured it in Seattle. Correct? Emerald City? .... not recognized here as such, sorry. Yeh, the O'Brien is ported here in San Francisco and is now making a Pacific run to the northwest. They need to raise a helluva lot of money to keep it in the running as totally non-profit, public historic service.

Many thanks for the sked information. I will be listening.

It is one of the questions in the pool, but it isn't necessarily on
every test. However, it is naive to use that formula for a real antenna.
You almost always have to adjust the length in order to account for other
variables. The formula gives a *free space* value, but our antennas are
rarely mounted in free space. There are also mechanical factors to consider.

It is not unreasonable for a new amateur to ask this sort of question.
Often those things which appear simplest to those of us with practical
experience can be the most baffling to those with none. Remember, the
only stupid question is the one you neglected to ask.

>have been dropped and you might consider taking some action.

Nope, nope, nope.

A proposal doesn't hit those lists *until* the RFD is posted. The RFD for
the "boatanchors" newsgroup has never appeared, despite copious flamewars
in news.groups over the name, which actually went far enough to produce at
least one diligent "no-NO" campaigner.

Well, I haven't seen a comment against the name in weeks, and for weeks
before that the only such comments came from radio people, not news.groups
people.

HOWEVER, the RFD *still* hasn't shown up. This is why this thread
exists. There are bunches of similar threads out there (see, for example,
those asking where the CFV is for soc.religion.paganism). However, given
that there was initially vehement opposition from news.groups people to
the name, some people think the RFD is being held up on that account. I
really don't know what's going on, and I'm kind of worried, because the
first proposal in which I'm a proponent is about to be sent to the queue,
and I don't know if it'll be posted in July or September the way things
are going. (Nor whether the CFV will appear in August or December...)

Anyway. Mr. McCarthy is correct. The person who "starts the process", a
man named David Lawrence -- whose job is called tale (there's a different

tale for the uk.* hierarchy) -- has to approve the RFD for posting to news.announce.newgroups. Once he's done so, it will appear in the lists referenced by Mr. Menconi. Please do *not* take the boatanchors group's absence from those lists as evidence that the proposal has expired.

It hasn't, alas, even begun yet. (weep...)

Well, unless they REALLY redesigned the CPU, it is all still 0's and
1's. All compilers do is take higher language and translate to, you
guessed it, 0's and 1's. I have to say, though, that it seemed a little
too easy to infect them with the virus, but, thats Hollywood.

The same would be true in my area near L.A. -- people are generally kind of tickled to hear preteens on the repeater, and it generally improves everyone else's level of patience and courtesy when they realize that kids are around. If they want to look for frogs on simplex, that shouldn't be a problem. If some grouch interrupts them and tells them to get off the frequency that he uses to talk with a friend every day at 4:00, tell them to roll with the punch and feel sorry for the guy -- and QSY. No big deal...

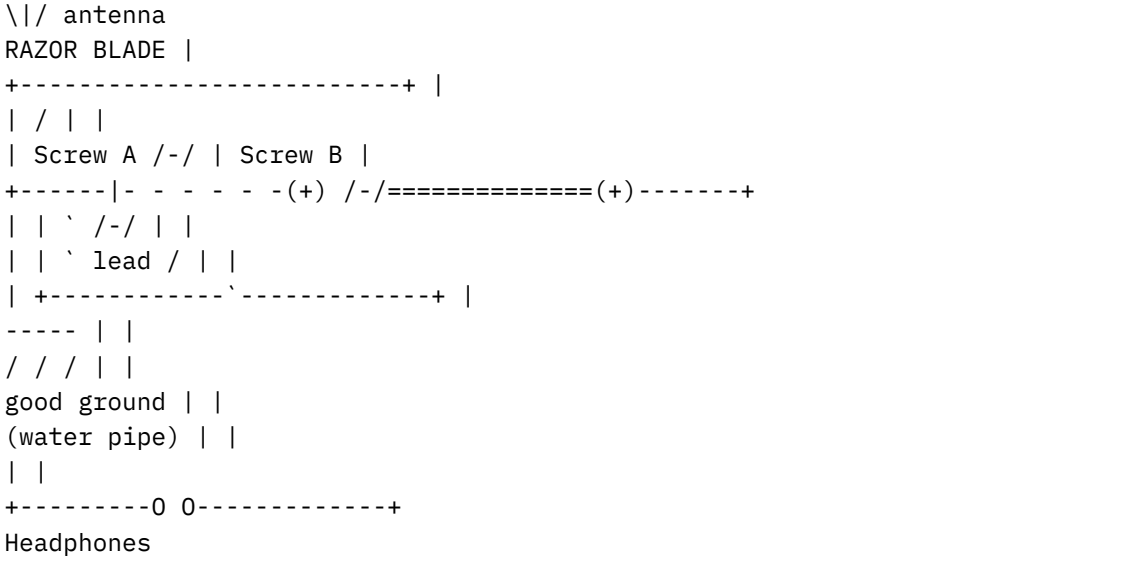
> Jeffrey Weil
> jeffw@shadow.net

I made many of these razor-blade radios as a young boy, from plans in a
Boy's Life magazine. Probably about 1959 or so. They really are amazing.
NO EXTERNAL POWER! I haven't actually built one for years, but need try it
again also!

Here is the basic plan, as I remember it.

Top view: (Sorry for crude ASCII drawing...)



1) Carefully buff the double-edge razor blade with a grindstone to remove
the coating and make it more sensitive.

2) Mount the razor blade loosely on a board, with a 1/2" screw (Screw A)
throught the center hole. Put a couple of washers underneath the blade to
lift it off the board and another washer above the blade.

3) Take two pieces of insulated bell wire about 5" long and remove a 1" piece
of the insulation in the center of each of them.

4) Wrap the bare section of one of the wires around the razor blade screw between the bottom washers that hold it off the board. These two pigtails will be used for connecting to the headphones and ground.

5) Put a couple of washers on another 1/2" screw, and mount it (loosely) to the board about 1/2" away from the edge of the blade.

6) Wrap the bare middle section of the other 5" wire around screw B. These two pigtails will be connected to the headphones and antenna.

7) Get a 3/4" piece of pencil lead. I recommend carving up a wooden pencil (remember those?) so you can get a good strong piece. Sand one end flat (blunt).

8) Cut a bare piece of bell wire, about 2 inches long. Now wrap one end of the wire around the pencil lead about 5 times. (Now you know why the lead needs to be fairly "fat".) The lead should protrude from the bottom of this little coil of wire.

9) Connect the other end of this wire to screw B.

10) Tighten both screws.

11) Bend the piece of wire holding the pencil lead so that the blunt end of the lead rests on the surface of the razor blade with as much surface contact as possible.

12) Connect one of the wires from screw A to a water pipe and one of the wires from screw B to a long piece of wire for an antenna.

13) Connect the other wire from Screw A to one side of the headphones. Connect the other wire from Screw B to the other side of the headphones. (Sorry, I don't have the specs on the kind of headphones to use; I had a cheap pair and they worked fine.)

14) Listen.

To tune the radio, carefully wiggle the lead (or wire holding the lead) and move it around the surface of the razor blade. Let go when you hear music! You should be able to pick up local AM radio stations.

Have fun! Report back if it works!

Bill,
You can find info on many different types of radios (and Kantronics TNCs)
on Laura Medcalf's web page titled "Radio-TNC Wiring Diagrams Index" at
URL: http://www.idir.net/~medcalf/ztx/wire/

Here's an excerpt from the Kenwood 8-pin info, in case you can't access it:

8-pin Mic Connector

Alinco, Kenwood

Pin 1 - Transmit Signal
Pin 2 - PTT
Pin 6 (some models) - Receive Signal (not wired if speaker plug is used)
Pin 8 - Ground

(the page has a pin diagram graphic on it)

Speaker Plug (3.5 mm mono) has the Receive Signal on the tip.

There is a link to Laura's information from the Kantronics web pages
at URL: http://www.kantronics.com/ in the tech support area.

I really like the razor blade radio. Thank you very much for posting it. I remember having a secret pen radio when I was a kid. The razor blade is fascinating. I was going to suggest a mod (like inserting 80 foot wire connected to a Drake r8a between the razor and head phones to improve reception) but I won't. The razor blade radio stands alone as an enigma and a shrine to curiousty. May I sell the plans for it in swap if I give you 40% ? <grin> To the thinking impaired I was just joking about selling the plans.

Wait there's something wrong here. None of the folks mentioned in the above
paragraph have contributed to this thread why are they mentioned? Could it be
that St. Christopher the lesser has taken a cheap shot while waxing eloquently
about the wonderful folks such as himself who are one the net?

>What you heard about hams helping others that want to join is true of most of
>us. All I will ask, is that you dont base your entire opinion about amatuer

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 JULY AND FORECAST FOR 10 JULY - 12 JULY

1A. SOLAR SUMMARY
Activity: High.

Flares Max Fadeout Begin End Freq. Sectors
M1/SF 0144UT confirmed 0144UT 0210UT low Australia/
East Asia
X2/1B 0911UT probable East Europe/
Middle East

Observed 10.7 cm flux/Equivalent Sunspot Number : 84/26

GOES satellite data for 08 Jul
Daily Proton Fluence >1 MeV: 8.6E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 6.9E+06 (normal)
X-ray background: B1.2
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Jul 11 Jul 12 Jul
Activity Moderate Low to moderate Low to moderate
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Jul: 83/24

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 08 Jul
Learmonth 4 2122 1111
Fredericksburg 5 12
Planetary 6 11

Observed Kp for 08 Jul: 2242 3323

2B. MAGNETIC FORECAST
Date Ap Conditions
10 Jul 10 Quiet
11 Jul 30 Active to minor storm
12 Jul 15 Unsettled to active

COMMENT: An increase in activity is expected on 11 July due to
the X2 flare on 9 July.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
09 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
10 Jul Normal Normal Fair
11 Jul Fair Poor Poor
12 Jul Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
09 Jul 15

Observed Australian Regional MUFs:
Darwin: Near predicted monthly values during the day, with
blanketing Sporadic E layer during local night-time hours.
Townsville: Near predicted monthly values.
Sydney: Near predicted monthly values, with night-time
Spread F and occasional Sporadic E layer.
Hobart: Near predicted monthly values, with some blanketing
sporadic E observed during local night-time hours.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
10 Jul 15 near predicted monthly values
11 Jul 15 near predicted monthly values
12 Jul 15 near predicted monthly values
COMMENT: Short wave fadeouts (SWF) possible on daylight HF circuits.
Degraded HF conditions possible on 11 July in response to the
X2 flare on 9 July, but no significant changes to frequencies
expected.

Note - due to computer problems, observed foF2 data on the Daily
Data page that follows for fax customers is not available.

The skip is pretty thin up in this range, guys, so go worry about something else. Even if they do get their radios "peaked", unless they're willing to invest in EME-capable antennas, the range is very short (regardless of power).

Hi everyone:

It's pretty strange former CBS anchorman Walter Cronkite NEVER made the list. He has to be the OLDEST one of them all. How can we put together such a list without his name on it (even though his call is somewhat new)???

I strongly agree with fighting the problem. I suggest that you go
straight to your senator or presidential candidate rather than follow
the path up via the fcc. Power flows down much more forcfully than
it flows up through channels.

Sorry about my misinformation. I haven't been hanging around waiting for boat anchors (old computers, right?) but for some other group which HAS done an RFD and is now waiting for an CFV. I
made an assumption which was (as with most assumptions) wrong.

Thanks for clarifying it.

Hi Prank, Now you've done it - you're officially in the Burp&Spew catagory.
You're flaming without reason; you're flaming without knowing the backround
of the topic your replying to.

LHJ wrote some nasty comments regarding the amateur radio service; they
incorrectly faulted us for RFI caused to consumer electronic devices.
After the error was pointed out to them, rather than an apology they
shifted the blame onto the person they were interviewing (who is a rep
for consumer electronic devices).

Now you know why Chris provided the above comment.

5123. NEW JULY HAM POLL QUESTION ON-LINE>>http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-09 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-0807961716350001@host18.cyberg8t.com>
Source record: 221492

These are the most recent Ham Poll results as of July 7, 1996

The question for July 1996:

The ARRL has started a massive letter writing campaign. This campaign is directed at a proposaloffered by the "little LEO's", the low-earth orbiting satellite industry. Their proposal would have the FCC support a position at the International Radiocommunication Conference (WRC-97), that would allow the 2 meter and 70 cm bands to at be shared jointly by both the amateur radio community and the cellular phone industry.

The question I am asking this month is: "Do you support the ARRL view that this proposal is a serious threat to Amateur Radio, and needs to be aggressively opposed?"

If you believe this proposal is a significant threat to the future of ham radio, and should be dealt with
aggressively, check (depending on your level of support) either "Strongly Agree or Agree". If, on-the-other-hand, you do not believe this proposal has the slightest chance of being approved and you therefore see the ARRL's response as extreme, check (depending on your level of disapproval) either "Strongly Disagree or Disagree". If you have not formulated an opinion on this issue yet checkthe "Not Sure" box.

The results:

Strongly Agree |********** 21
Agree |*** 3
Not Sure |* 1
Disagree |* 1
Strongly Disagree |***** 5

Total votes displayed: 31
check the "Not Sure" box.

Rest a length of graphite, a pencil lead, on the edges of two blades. If
you are lucky, the edges will contact the crystaline structure of the
graphite in two places so as to allow the structure to act as a diode for
use in a crystal radio circuit. Nearby stations should be detectable.

Morse Outreach 2000 World Conference in 1997
-
This first world gathering of clinicians, teachers, users, families, researchers, product developers, and other Morse enthusiasts who have caught the vision of Morse code applications and research in AT, AAC, education, and rehabilitation will be held:
-
Saturday October 18 and Sunday October 19, 1997 at the Radisson South Hotel in Bloomington, Minnesota (Minneapolis suburb) USA. The Morse 2000 Conference will begin at 4 pm on Saturday and conclude at 4 pm on Sunday. It has purposely been scheduled, upon the suggestions of many of you, to occur after the annual Closing the Gap Conference on AT/AAC held at the same site.
-
Further details and specifics will follow soon. Please suggest agenda items and presenters/presentations so that the Advisory Committee may establish content and schedule soon. Thank you.
-

5136. JVFAX for SSTV

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-10 00:00:00 UTC
From: fmarsh@ozemail.com.au
Message-ID: <4rvvl9$9ig@reader1.reader.news.ozemail.net>
Source record: 221355

I have set up JFAX7.0 on my PC486/66 for SSTV. Prior to this I was using JFAX6.0 and for tranmission purposes, I took the audio signal from the PC speaker output, through a small isolating transformer and on through the usual circuit into the microphone input of the TX.
Since then I have fitted a SoundBlaster 16 sound card to my computer, the output of which is directed to a hi-fi amp & speakers. Now I would like to set up JFAX7.0 so as to direct its audio output through the sound card, thereby overcoming the need to have any direct electrical coupling via the PC speaker connection. I monitored an SSTV signal from someone a few years ago who was using a similar acoustic coupling transmission through his hi-fi. The results were impressive not only for the picture quality, but also because this method made the transition from picture to voice so much quicker & easier.
Has anyone got details on how the program can be configured to divert the transmitted picture signal to the sound card? In view of the fact of having heard it being used I know itï¿½s possible, but how to do it escapes me. My preferred email address for replies is frank_marsh@msn.com

These are called "Foxhole" radios. Guys in the war used them to hear
shortwave. They used the razor blade and lead from pencil as the detector.

Quite nifty. Works like the older xtal radios.

>thanks

The old TS-700 will do fine, but you really need a beam, even a small one. Most SSB activity (other than satellite) on 2m is done with horizontal polarization, so that's what you want to use too. A vertical would give you severe cross-polarization loss. A 4 element 2m beam is pretty small, and easily made from bits of old TV antennas, so it can be cheap too. You could use a quad instead, however. You can make one of those with some PVC pipe and wire. A dipole would work, but you really want the gain and directivity that a beam of some sort will offer. It will make a huge difference.

I have big beams on a tower at home, but I use a little 4 element yagi made from VHF TV antenna bits for portable work. That works really well because most TV antennas are designed so that the elements can fold down against the boom for shipping. That makes the antenna easy to carry in the car. I just trimmed the back 4 elements down to length, cut off the excess boom, and fitted a gamma match to the driven element. I've used a mop handle for a mast on occasion, but I usually carry a telescoping pole. The ones Radio Shack sells are all right, though a bit heavy and awkward to carry in the car, but Home Depot has a long handle they sell for changing light bulbs in warehouses which telescopes out to 22 feet and collapses down to 5. It's lightweight aluminum so it is easy to carry. You really should guy it with a beam on top, but I've gotten away with no guys on calm days.

If antenna restrictions are the problem, this sort of portable setup might be just the ticket. You can drive to a nice high spot, put up the antenna, and work some Dx. The little yagi, or a quad, are small enough, however, that you could use them indoors. Of course that won't work as well due to the low height and the near field effects from being indoors. It would still beat an indoor dipole though.

If you are bound and determined not to use a beam, however, you could try a halo. That's just a horizontal loop. It works, sort of, and isn't too big. Its one advantage is that it is omni-directional, so you don't need to rotate it, but it has zero gain. It's ok for casual use while mobile.

ARLX016 Bertha update 1

ZCZC AX62
QST de W1AW
Special Bulletin 16 ARLX016
From ARRL Headquarters
Newington CT July 10, 1996
To all radio amateurs

SB SPCL ARL ARLX016
ARLX016 Bertha update 1

As of 0900 EDT Wednesday, July 10, 1996, a hurricane watch continues
for the North and South Carolina coasts. At 8 AM, Hurricane Bertha
was located approximately 635 miles SSE of Wilmington, NC, and
moving northwest at 18 MPH. Maximum sustained winds were 105 MPH.
The current forecast track has the storm center off the coast from
Charleston, SC, Thursday afternoon and then parallel the coastline
and move toward the outerbanks early Friday.

The Hurricane Watch Net is expected to be active on 14.325 MHz as
the storm draws near the US coast. Amateurs are requested not to
transmit on this frequency unless directed to do so by Net Control
Stations.

You're right, Bill, the choice of "un-hacked" was poetic license referring
to "hack" in the original post. But, could *you* get a UNIX system
running in half a minute with Velociraptors breathing down your neck? :-)

We have enough trouble around here after an outage. And all we have
breathing down our necks are Web-crazed students and status report-hungry
managers.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 10/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 10 JULY AND FORECAST FOR 11 JULY - 13 JULY

1A. SOLAR SUMMARY
Activity: Moderate

Flares Max Fadeout Begin End Freq. Sectors
M1/SF 0343UT Confirmed 0341UT 0410UT Lower Australia/
East Asia

Observed 10.7 cm flux/Equivalent Sunspot Number : 80/20

GOES satellite data for 09 Jul
Daily Proton Fluence >1 MeV: 3.7E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 5.5E+06 (normal)
X-ray background: B7.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
11 Jul 12 Jul 13 Jul
Activity Low to moderate Low to moderate Low to moderate
Fadeouts Possible Possible Possible

Forecast 10.7 cm flux/Equivalent Sunspot Number for 11 Jul: 79/19
COMMENT: Solar region No. 7978 remains active, and further flare
and short wave fadeout events are possible.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 09 Jul
Learmonth 4 2221 0111
Fredericksburg 3 5
Planetary 5 4

Observed Kp for 09 Jul: 2211 1111

2B. MAGNETIC FORECAST
Date Ap Conditions
11 Jul 30 Active
12 Jul 15 Unsettled to active
13 Jul 12 Quiet to unsettled
COMMENT: IPS Geomagnetic Warning 8 was issued on 10 July and

is current for interval 11 July only.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
10 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
11 Jul Normal Normal-fair Normal-poor
12 Jul Normal-fair Fair Poor
13 Jul Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
10 Jul 9

Observed Australian Regional MUFs:
Near predicted monthly values, with some spread F observed during
local night at all stations.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
11 Jul 15 near predicted monthly values
12 Jul 10 near predicted monthly values
13 Jul 10 near predicted monthly values
COMMENT: Degraded HF conditions possible on 12 July in response
to recent flare activity, but no significant depressions to frequencies
are expected.

Jeffry,

I made one years ago from a razor blade (used prefered), a safety pin, headphones, and wire. No battery. It was called a "foxhole radio", worked like a crystal radio, but used the corroded razor blade surface and the point of the safety pin to create a diode. The razor was connected to a good ground and the safety pin was connected to as large an antenna as possible. The headphones were connected with one side to ground and the other to the pin (antenna). By moving the point of the pin around the surface of the razor, a point of rectification could be found. A strong AM signal is required to work and no tuning is possible in its simpliest form. Of course, a tunable LC tank circuit can be added, but then again you could just buy a radio for the trouble.

I'd be curious to know if anyone remembers what book that came out of.

Hope this helps.

Brian

5161. Copying Behind

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-10 00:00:00 UTC
From: Jim Reid <jreid@aloha.net>
Message-ID: <31E443F7.3EE2@aloha.net>
Source record: 221380

Follow up to my post on better CW skills, some
questions came in on this subject.

To copy behind, you must be "reading" the code
in your mind. What you are hearing is words,
being spelled to you in a different language.

To really "learn" CW, it is best to learn to copy
in your head from the beginning. All CW learning
techniques about which I know, start having you
write down from the very first letter heard --WRONG!

Just listen. If you now know the sounds of
each letter, that is, know that didah is A, and so on,
then start at about 3 to 5 wpm word speed, with the
letters being sent Farnsworth method at 15 to 18 wpm,
that is with quite a bit of space between letters, just
listen. The ARRL and Gordon West tapes do this, and all
computer training programs can be so set up.

At 6 wpm, a Morse letter or word space will occur once
every 2 seconds; at 3 wpm, once every 4 seconds!!
Thats a lot of time to decide what a letter just heard
is, and then remember it until the next letter comes along,
etc, and then put a word together. Don't write it down!
(This timing is based on the "standard" which says that
the word PARIS is sent
20 times in one minute, the speed is, by definition
20 wpm, that is 100 of those letters, plus word spaces
between the 20 words IS a speed of 20 wpm; 200 would be
40 wpm, 50 would be 10 wpm; 25 letters, 5 wpm and so on).

An excellent augmenting practice techniuque is to make a
tape recording, or have someone, spell words to you
from a newspaper article, or story, out loud, and in
plain old English. If he speaks one letter to you per
second, plus waiting one second for each wordspace, he
is spelling words to you at 12 wpm speed. If he waits
2 seconds, two clock ticks between letters spoken, the
speed is 6 wpm. You should learn to put stories together
in your mind this way from the very beginning of Morse
code practice; while at the same time you are doing the
same thing, at maybe 3 wpm with actual code practice
tapes or computer training programs, such as Morse Academy.

Would be best were you never to write words down when learning the Morse Code until you must prepare to do so for your license tests!! I guranatee you would have no trouble whatsoever passing, were you able to just sit and listen to 5, 13 or 20 wpm stuff, and be just as comfortable "copying" and reading in your mind doing that, as you would be copying and reading in your mind what a friend is spelling to you outloud as described above.

This totally separates two different tasks which must be learned to pass a Morse Code test. These two tasks outght to be learned separately from the beginning, and then so many would not get discouraged and "drop out" of the fun and excitment of CW QSO'ing. And I am not kidding when I say it can be lots of fun!

Learn first to understand the language of having words spelled to you, then learn the relatively simple task of doing exactly the same thing when the letters making up those words are being "spoken" to you encoded in the Morse way. You will enjoy.

73, Jim, AH6NB, QCWA, OOTC #3040, etc.,etc.

Hi Frank, If you look in the Subject Line you'll see "News from Spain";
and the "es" in Jose's address and the newsgroup's title should also tell
you the group originates from Spain. That pretty much rules out any
connection with "Espana o Mexico."

He's a pretty interesting man. I've met him a couple times. Once helped him launch his helium balloon the Rosie O'Grady for a cross-country race.

His faster than the speed of sound without an airplane record happened in the 50's when the US was testing ways to get astronauts back from outter space. The then Captain Kittinger rode a balloon to a height of 100,000 + feet then jumped out of the pressurized gondola. He reached the speed of sound in freefall. He was featured in Life, National Geographic and others at the time.

>I refuse to accept that I have to manually turn down the volume on the
>subband when I wish to transmit, and then remember to manually turn the
>volume back up. This is not only stupid, it's darn poor engineering.

It probably is. However, if you read the manual carefully, it
doesn't say it can do that. You assume all radios can do it but it
doesn't. My both 2350H and 2700H both can't do it, and I have to
manually turn it down, my problem is even higher, since I operate on
various crossband repeaters and will have feedback if I don't turn it
down enough, but then I might not hear the other side on the subband
if I can't pick him up on the main band.

However, I don't think it's a bug, it's a lack of feature. I don't
like it but I won't be so harsh. The intermod on the radios deserved
more attention than this, because it annoyed me more.

Either it's some news servers are doubling or you sent this complaint
twice. I already answered the last one and seeing it again.
>Anybody got a suggestion for a fix or mod ?

You'll never know until you start a conversation with one of them. But at the same time, those "older guys" have decades of knowledge and experiences they're just waiting to share with you, such as what they did during WWII or the Korean War, what discoveries they made or invention they patented, their contributions to amateur radio in the early decades, journal articles they've written, et cetera. Think of an OTer as an encyclopedia just waiting to be opened. Remember, those are the guys who wrote the books we read years ago to learn more about our hobby.

Hi Joe - Jeff here on Oahu. The Cootie sure takes quite awhile to master! I made one out of a hacksaw blade and spent hours *off* the air practicing to insure that each code element never occured on the same side. Whew! But you can send much faster with one than with a straight key.

Just a reminder to folks who are interested in power-free radios that there is the Crystal Set Society - they publish a bimonthly newsletter. There is a 4-volume handbook available containing a huge number of articles from their previous newsletters. Send your $9.95US ($11US in Canada, $16US outside NA) to: The Xtal Set Society, PO Box 3026, St Louis MO 63130. Each volume of the handbook is $10.95.

Here's part of the index of articles in Volume 4 of the handbook:
*crystal set driven 400ft vertical
*portable crystal set
*foxhole razor blade set
*two Quaker Oats radios
*homebrew headphones
*basketweave coil
*measuring coil capacitance
*formula derivation
*homebrew curve tracer
*crystal earphones
*ten best xtal circuits
and more. 86 pages.

5177. help. rf approvals in europe

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-11 00:00:00 UTC
From: marcus@ihug.co.nz
Message-ID: <4s2eh7$3bf@newsource.ihug.co.nz>
Source record: 221300

Hello,

Can anyone help me.

I want to find what frequencies are available for a product I am building to sell in Europe.

It is a low powered wireless microphone (or 'auditory aid') and it must be legal for use in Western European countries.

1. Is there a band available which encompasses most/all countries preferably in the 30-100MHz range (but negotiable).

2. What standards must we comply with?

3. What regulatory bodies must we deal with? Obviously our preference would be to have it approved with one body which would then be applicable for all.

4. One option is making the unit sufficiently low power so as to not need approval. What would this power level be and what frequencies?

I would be most appreciative of any help anyone can provide me with. Even a place to go to get more information.

Thanks.

Marcus Tetro

Render unto me a ****ing break.

Do you honestly, seriously believe that there'd be confusion that a group
named rec.radio.amateur.boatanchors would be about *computer hardware*?!

Note, in particular, that the original poster called it "boat anchors", not
the real name.

You Bet !!

I have that book at home on the shelf. My father bought it for me about
35 years ago to give me a basic understanding of radio/television. 10
years ago I told a co-worker about the "Foxhole Radio" and he put one
together and said he had a "Hoot" of a time with it.

I'll get the name/author information and get it out to you.

I remember building a foxhole radio from a diagram in an "All About"
book. "All About" books were a series of books for kids. I guess this one
was "All About Electronics" or something like that. I guess foxhole
radios appeared in a number of places: books and magazines. The one
I built had the razor blade/pencil lead detector and a coil whose form
was a cardboard toilet paper tube.

I've really enjoyed this thread. I'd forgotten all about the fun I
had building this simple radio.

Hi Cecil,

Although I basically agree with you, I think (hope) there is a chance
for all of us. May be the key factor is speed. I can paper-copy under
favourable conditions almost 20, and if I listen to random words, sometimes
one is clear to me, similar to a foreign language. Slowing down speed
does, as you mention, not help because I forget the beginning half way
through.

Ramsey Electronics sell a xtal radio kit. This kit, which I purchased for $20 or so contains a Diods for detectos. The instructions show how to use two razor blades (fox-hole) and lead from a pencil for detector. It also includes a piece of Galena. In the old days, galena whas used because certain sections where "doped" and only conducted in one direction when touched with a cat whisker (piece of metal). The problem was tuning this radio up one had to hunt around for a doped area until bingo it worked. Obviously it wasn't a walkman.

Interesting kit. I suggest you should try it first since it is very simple and interesting. Also, depending on the taps in the coil, you can receive commercial, shortwave, any band. Selectivity is the pits, though.

>When a person says the new letter, I immediately forget
>the previous letter and I have to keep repeating that
>single letter, over and over to myself, or I will
>forget even that single letter.

I read that the average person can keep no more than 3 to 5
items in a list in their mind at any given time. That's why
phone numbers are broken into a group of 3 digits followed by
a group of 4 digits instead of being presented as a group of
7 digits. Some can obviously keep more, some less, items in
the queue before they have to associate them with a larger
pattern. But on average, if a person can't quickly tie the
list items together into a pattern, they are lost in much
the same way as a stack overflow in a computer loses the
oldest item when a new item is pushed on the stack.

In my case, slowly spelled letters overflow my "stack" fairly
quickly, so I can only recognize short words spelled to me
this way. I can handle T H E, but T H E R M O D Y N A M I C S
has its first letters rolled off the stack before the last
ones arrive. But if the letters are spelled to me rapidly,
I can make sense of the pattern, the word, before the letters
spill out of the stack.

On the next level, the words have to associate into an expression,
IE a coherent idea, fairly quickly or the first words start to
overflow off the stack. In other words, if the preceeding sentence
were sent to me at 5 WPM, I'd have no idea what it was trying to
convey by the time I copied the last word, some 6.14 minutes later,
unless I wrote it down and could re-read it at a fast enough rate
so that comprehension remained possible.

>This condition is not a rarity. A lot of people's
>short-term memory is such to prohibit them from
>copying behind. No way are your techniques going
>to cure a biological problem.

It isn't so much a biological *problem* as it is simply a biological fact. If what I read is correct, it is the people who *can* retain long arbitrary lists in their minds for significant periods who are the exceptions (in other contexts they are called savants). Again using myself as an example, I cannot comprehend an article read to me slower than about 60-70 WPM unless the concepts expressed are incredibly simple, obvious, and stylized so that I can leap ahead of what is being sent and grasp the meaning before the leading text is lost off the stack.

What this means to me is that I won't be able to copy "in my head" unless the transmission speed is at least 60 WPM. Slower than that, I *have* to write the letters down and then go back and re-read at a speed where I can make sense of the idea being conveyed.

>I can explain to you exactly how to dunk a basketball.
>Odds are, you still couldn't do it after my most
>careful explaination. Just because I can dunk a
>basketball, doesn't mean the rest of the world can
>learn how.

True. I'm told that some people have a "blackboard in their mind's eye" where they can "write down" the letters and then read the sentence when it is complete. I can't do that. My mind doesn't work that way. In fact, the whole concept of mental visualization is foreign to me. I understand the *concept*, much the same way a 5'2" person understands the *concept* of dunking a basketball, but like the 5'2" person, actually performing the dunk is just not possible. (But the short person may be able to do incredible tumbling routines that the 7 footer would find impossible to do.)

A classic yoga technique is to visualize a brick wall in your mind. You are supposed to actually "see" that brick wall, and you're supposed to be able to fill in the details, the textures, of the bricks and mortar as you continue to concentrate on the image. I can't even visualize a child's sketch of a brick wall. My mind doesn't work that way. I understand what a brick wall is, I can explain the abstract concept of a brick wall, I can describe the texture, shape, and mass of a brick, talk about mortar and how it works chemically, but I can't "see" a brick wall in my mind. My mind works on a different level of abstraction than a mental image.

To those who can visualize, it is as natural as breathing, and it is hard for them to understand that other people simply cannot do that, no matter how hard or long they try. The same is true for "head copy" Morse. Some people can do it, and find it a natural thing, others

simply can't even imagine doing such a thing because their minds don't work that way. OTOH, some people may find the abstract symbols (concepts) I manipulate in my mind an incomprehensible way of processing data, and totally impossible for them to do. That doesn't mean either way is defective, just different.

We are searching for Icom UT29 Modifications for our repeater system.

What we need is the Mod for the Encode/Decode to run the units CTCSS on duplex. The Original mod Was in International Radio And Computer Magazine, Inc. April 1989 Edition. I have looked all over the place for references to this Magazine on the Web, etc without luck. If anybody has it, I would be MOST apreciative.

If you have the mod Or could point me to an FTP site/WWW site I will forever be in your graces. Thanks :)

Hello Rob,
As the other gentleman told you it would be way to slow to bother with. If you would like to try networking your two computers for file and print sharing in a very cheap fashion. By a null modem cable for about 10 bucks and use "direct cable connect" in Win95 it will work much faster then ur packet idea.

I expect you'll have better luck with reflex copying. Using that
method, you don't have to depend on short term memory, and you
can read the text back when you're done to see what was said.
This is the only method that works for crypto text, and it also
works fine even if you don't understand the language being used
for the message.

Every so often, QST and other magazines carry articles detailing various aspects of the history of amateur radio -- what gear was like in the 1950's, the propagation experiments of 1920, early transmitters, etc. etc. Of course there is Mr. De Soto's classic "200 Meters and Down" -- boy, do I wish there were an electronic copy of that wonderful little book.

These musings bring me to my question: anyone know of any sound recordings of amateur radio activities in the past? Did anyone attempt to record what, say, a typical night on 200 meters sounded like in 1914 or 1919 or 1920? Or how about what the bands sounded like in, say, 1925 or 1928 when more stringent frequency allocations came into effect? I'd be interested in what 5-meters sounded like in the '30's? Same goes for 160 and 80 meters? What was 40 meters like when it was CW only? Or 10 meters when first extensively used in the late '30's? What was ragchewing on two-and-a-half meters like before WW2?

I don't suppose any of this sort of trivia was ever recorded. But everything else from the ridiculous to the sublime has been recorded so thought I'd ask.

Thanks in advance.

In 1980, AEA made what was then a very fancy electronic keyer known as the AEA-1 Morsematic. (Less expensive versions were also made.) The keyer had a Morse trainer, beacon mode, message storage, incremental QSO numbering as well as the standard keyer features. I've lost the manual for this machine. Anyone know where I can obtain the manual -- I've forgotten some of the esoterica of machine operation.

Thanks.

Ted,

The only way you will get interesting discussion on the repeater is to initiate it; it is kind of like going to a cocktail party; unless people are willing to push the conversational envelope, people will talk about the lowest common denomination of communality -- whether that be work, the weather, or how the local team is doing.

Several years ago, before he moved to California, NY1T and I would have a regular bs sesssion on the repeater after 9:30 or so. Our topic for months was black holes, relativity, and event horizons. We are not physicists; we were both just reading _A Brief History of Time_ and some asrticles in Scientific American and trying to figure it out for ourselves.

Even now, a few years after NY1T moved, I will still have people come up to me and either joke about our "outer space" conversations or compliment us. In fact, in June our VE team gave a tech license to someone who had heard those conversations on her scanner several years ago and figured ham radio was *much* more interesting than CB.

Ahh, but the connect time would be f~r~e~e!
I personally would love to see a Win95 TNC network driver.

No, but with the initial guidance of instruction, the more you practice
the more hoops you will make...Guaranteed !
I don't beleive that Jim is saying everyone can become perfectly
proficient at copying behind but it is likely that you can do it now,
albeit perhaps not very fast. Practice will of course improve your
ablilty.

Re: lack of short term memory...this too can be a learned fuction that
improves with practice. It has everything to do with your attention span
and ability to concentrate.
I used to suffer from this...I could not read a novel due to fact that
I was a scatterbrain...too many things on my mind to concentrate on the
book. I would begin reading then my mind would start to wander.
Granted, the material needs to be interesting enough to keep my
attention but thats where practice and peace and quiet play in.
And with CW, a set of headphones was a key ingredient in keeping my
concentration focused. (This one from the "it works for me" files.

I highly recommend headphones when copying CW.)

I don't believe it is a biological problem. If you have the ability to learn then exercise will result in improvement.

rec.radio.amateur.boatanchors - how could you misunderstand what is meant
by the name? Should we instead propose
rec.radio.amateur.boatanchors.radios.not.computers just for you, Ralph?

You still continue to condemn the name even though it has been shown
repeatedly that that is the most natural choice. I'm beginning to believe
that you've dedicated your life to making sure that group never becomes
a reality!

You are right. I just don't think many of the older guys on the local
repeaters would be very interested in most of the things I am interested
in. But, that is an error on my part. I have talked with several
interesting people in the past few weeks, partly because I am becoming
more comfortable talking on the air. Its not that I'm shy on air, I did
CB for YEARS in Sr. high. I just felt slighty uncomforable barging in on
qso's with people that have talked to eachother daily for quite some
time. I will try to improve the situation by interjecting some BS of my
own :)

5208. US License Examination Opportunities Scheduled 7/11/96 to 9/30/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-11 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <31E55BC7.542C@arrl.org>
Source record: 221331

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/doc/hamualr/callsign.html

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee

if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.
Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT

PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

Actually, it has everything to do with the 1958 Ford horn ring that
penetrated the left side of my brain.

>I don't believe it is a biological problem. If you have the ability to
>learn then exercise will result in improvement.

Bet me $100 and I'll show you my MRI. As a result of the accident, my
speech processing baud rate is about half normal. It takes me a few
seconds to recognize someone and remember his name. I lose words in
mid-sentence. If I don't write something down that I've heard, it
will not be remembered. And I'll never be able to copy CW like I
could before the accident. Good thing I was already a general when
it happened.

(1) ID4 is a MOVIE. Not real life ..... GET A CLUE PEOPLE

(2) it was not amateur operators that were making the CW stuff.. it was military types in soldier suits. At no time did they mention hams as sending the CW. The only mention was that hams were REPORTING that CW was being used to co-ordinate the various nations activities.

(3) SEE #1

(4) in the event #'s 1 and 3 are ignored remember this In the movie BABE, the lead role was also a ham. Why not start asininie bantering about that!!!! did Babe use CW to control the sheep.
Did Babe have lively contacts with the farmer and his wife and if so, what frequency and power
setting did he use?

just a few personal thoughts no need to reply unless you really have no life, like some in TX and MA.

still need a KH2 and a VK

5214. Re(2): FT530- can step size be changed in 800 Mhz range???

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-11 00:00:00 UTC
From: yuri@macline.com
Message-ID: <3547469.ensmtp@macline.com>
Source record: 221337

My understanding is that step size is the least of your problems with a
modified FT-530 in the 800+ bands. I am told that in the U.S. versions
anyway there is no electronics covering those bands. At least, that help
explains why I have never heard even static when tuned there. Let me know
if you find a solution.
==========

That depends on how old your FT-530 is. Mine is about 2+ years, and I
can hear plenty in the 800 and above range.

I'm sure you can thank the ECPA for the difference.

73,
Steve.

Being that no license is required for CB any longer, I doubt that a
commercial license is required to service the radios. Could be wrong.

Amazing how the world "has" to resort to using a straight key and morse code for our survival yet the Area 51 folks could tell that the alien spaceship, which is being flown by the American fighter pilot, was up in space and in position to sabotage the alien mother ship. Wait a minute, I thought all communications, including radar, etc. was knocked out. Whatr gives? I know, my wife says" "It's just a movie!" Yes, but at least give us some sense of credibility bin a movie.

Also, please explain how someone using a small laptop computer can design a program (virus) that will disable an alien spaceship's communications and defense systems? And why would the aliens, who are obviously much more advanced and intelligent then we are, given the size and maneuverability of their ships, not have installed any anti-virus software to protect against this threat? Maybe Norton Utilities can look into this as a way to expand their market? Just Kidding.

I thought this was a DUMB movie. Then again, I went and say Congo, and Species. A trilogy of dumb movies. I will learn. Save your $5.50 and see a good movie or stay home and watch the sunset. Much more entrertaining.

Try this on for size. I was a commercial RO for Panam Latin American
division from 1946 to 1949, then changed to old CAA at Miami, Fla.,
then went to ARINC (airlines communications for all commercial carriers
in USA and all foreign carriers that traverse US. I used CW in Panam
, CAA, and ARINC till it went out of style about 1953. We not only
copied behind, but has to service our msgs as we sent or received
them with the other hand simultaneously as we sent stuff. We had
to copy at average of 40 wpm and copy as much as 5 words behind or more
and at same time count the nr of words in a msg by putting 5 words,
then double space, then 5 more words, then at end of msg count lines
very quickly to compare the total nr of words with the ck count
in the msg header. I cant believe it now at age 75 that I did that
for so long without a glass arm, nor a brain stroke, but ask any
old time cw opr either railroad or airlines and they will bear me out.
P.S. for several of those cw years I used a "sideswiper" instead of
a normal Vibroplex bug. Try swinging a sideswipper (cootie key) at
40 wpm or better. Its a real high.

Somewhere, ("Elementry Electronics" magazine??) there was an article
on someone doing this for kicks, with modern blades.

The above is correct...the anti corrosion coaating on modern blades
screws up the rectification properties of the origional design.
Seems like he heated them untill they turned blue to get a good
rectifying oxide layer on them.

You might knock a hole in the wall below a medicine cabinate with one
of those little disposal slots, and come up with some authentic
blades.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 11/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 11 JULY AND FORECAST FOR 12 JULY - 14 JULY

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 10 Jul
Daily Proton Fluence >1 MeV: 4.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 7.4E+06 (normal)
X-ray background: B2.0
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
12 Jul 13 Jul 14 Jul
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 12 Jul: 76/14

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 10 Jul
Learmonth 4 2211 2111
Fredericksburg 5 4
Planetary 5 4

Observed Kp for 10 Jul: 0121 1221

2B. MAGNETIC FORECAST
Date Ap Conditions
12 Jul 25 Unsettled to active
13 Jul 20 Unsettled to active
14 Jul 15 Unsettled
COMMENT: Increased magnetic activity levels due to recent solar
flare events are now expected to occur around 12 UT on 12 July.
However, this activity is not expected to be as high as first
anticipated.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
11 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
12 Jul Normal Normal-fair Normal-poor
13 Jul Normal-fair Fair Poor-fair
14 Jul Normal Normal Normal-fair
COMMENT: Degraded HF conditions are possible for late 12 July
and 13 July in response to expected geomagnetic activity from
recent solar flare events.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
11 Jul 9

Observed Australian Regional MUFs:
Darwin and Townsville: Near predicted monthly values.
Sydney: Enhanced 15 - 30% for the period 12 - 19 UT,
otherwise near predicted monthly values.
Hobart: Enhanced > 30% for the period 16 - 20 UT, otherwise
near predicted monthly values.
Some spread F was observed during local night at all stations.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
12 Jul 10 near predicted monthly values
13 Jul 10 near predicted monthly values
14 Jul 10 near predicted monthly values

> Gary,

This is the method I used to learn the code. For the most part, I couldn't tell what was being sent until I had copied most of the message. This was because I wasn't striving to understand the message, but, rather, each character as I heard it. Although my brain wanted to synthesize the characters as words, I had to concentrate on the character. If I tried to process a word, I'd fall behind in my copy. Also, I found early on that I had to PRINT each character as I copied it. Otherwise, I'd lose my concentration. At one time I could copy code character by character at 27 WPM. At the age of 49, I can still process the code, but I can no longer print that fast.

Obviously, if one wishes to enjoy conversing in Morse code, the one receiving the code should strive to "read behind" a couple of words or so. But from my personal experience, the quickest way to learn the code for test purposes is to concentrate on individual characters.

Best regards,
Lindsay
WA4ISZ

Hi Jim, I don't think you appreciate the problem.
I cannot recognize a word when someone else spells
it to me verbally, letter by letter. What makes you
think I will ever be able to do it with Morse code?
When a person says the new letter, I immediately forget
the previous letter and I have to keep repeating that
single letter, over and over to myself, or I will
forget even that single letter.

This condition is not a rarity. A lot of people's
short-term memory is such to prohibit them from
copying behind. No way are your techniques going
to cure a biological problem.

I can explain to you exactly how to dunk a basketball.
Odds are, you still couldn't do it after my most
careful explaination. Just because I can dunk a
basketball, doesn't mean the rest of the world can
learn how.

Now that last phrase, I totally agree with - "but someone else is" is very true. Steve, you might read some of our opinion pieces at www.hamradio-online.com for further thoughts on that.

I completely agree but let's vent our emotional energy fighting real opponents, not ones that don't actually want our ham bands. Teledesic has their allocations at 19 GHz and 29 GHz for wide bandwidth communications.

> Chris Terwilliger, AA7WD
> zoom@willow.sps.mot.com

You're right it is. There are basically three modes of radar that amateurs are working with. The first is pulse, the second is CW, the third is a variation of CW, called FM-CW. There is also an interesting mode using Spread Spectrum. That's the mode that most Police radar manufacturers are heading (it will make the radar receiver obsolete).

Pulse is a very wide-band mode, and expensive. CW is very affordable in the availability of old Police radars from the 70's and 80's. FM-CW can be used with these through modulating the DC. FM gives you both velocity and range.

The reason you don't hear much, is that it is not mainstream. If it isn't about contests or morse code, it isn't fun for 95% of the hobby. It's really the 5% left that play/study any of the other modes.

SB SPCL ARL ARLX017
ARLX017 Hurricane Bertha Update 2

As of 0800 EDT Friday, July 12, 1996, Hurricane Bertha was about 140
miles south of Wilmington, North Carolina. Landfall is presently
expected to be between Southport and Wilmington, North Carolina,
later today.

ARES teams in North Carolina are operating from the State Emergency
Operations Centers. The main North Carolina HF emergency net
frequency is the Tar Heel Emergency Net is on 3923 kHz.

The Virginia ARES/RACES teams are expected to be activated today as
well. The Virginia Emergency Net, Alpha on 3910 kHz will be
handling emergency-related traffic on HF.

The Hurricane Watch Net on 14.325 MHz is also activated. Radio
amateurs are requested not to transmit on these frequencies unless
directed to do so by net control stations.

To all radio amateurs

SB PROP ARL ARLP028
ARLP028 Propagation de KT7H

Is this a last gasp for Cycle 22? Solar activity jumped unexpectedly last week, with solar flux peaking at 83.6 on July 9, and the average sunspot number up almost six points past the week previous.

Solar flares around the first of the month produced slow moving protons which affected the A and K index around July 3, 4 and 5. The highest K index was 4. Another flare this week is expected to cause disturbed conditions on July 12 and 13, just in time for the start of the IARU HF World Championship this weekend.

Look for the solar flux to get back down to around 70 by the middle of the month, rising again above 70 after July 28. The next solar rotation will probably bring the current active region around again to bump the solar flux up around 80 after August 1.

Sunspot Numbers for July 4 through 10 were 12, 12, 0, 27, 42, 44 and 36, with a mean of 24.7. 10.7 cm flux was 69.1, 68.6, 68.2, 71.9, 81.6, 83.6, and 79.8, with a mean of 74.7.

Here is a path projection for the teams in this weekend's World Radiosport Championship, which are in the San Francisco Bay Area.

To Europe, 40 meters should be open around 0330z to 0500z, 20 meters should be best from 0600z to 0730z. There is a small chance of a 15 meter opening around 2130z.

To East Asia, check 80 meters from 1030z to 1330z, 40 meters from 0900z to 1400z, and 20 meters around 0400z to 1000z and again around 1400z to 1630z. There is a small chance that 15 meters will be open from 2000z to 0800z.

To South Africa check 80 meters around 0400z, 40 meters around 0430z and 20 meters around 0530z to 0700z.

To the Caribbean check 80 meters from 0300z to 1030z and 40 meters from 0130z to 1130z. 20 meters should be open around the clock, with the worst times from 0730z to 1100z and 1400z to 1500z.

To the South Pacific 80 meters should be good from 0530z to 1330z, 40 meters from 0430z to 1430z and 20 meters from 0100z to 1100z. Check 15 meters from 0100z to 0630z.

To South America check 80 meters from 0330z to 1030z, 40 meters from 0230z to 1100z and 20 meters from 1200z to 1500z and 2230z to 0700z. 15 meters may open from 0100z to 0600z.

No code is limited to VHF/UHF and 50 mHz with a license class of Technician

As an ARRL VE, i found no mention of a learning disability as grounds for an
exemption, the most obvious being a physical disability being allowed.

> I don't really want to spend a lot of time and money if I'm going to

>
> Garry

you best alternatice is to contact either of the VEC groups ARRL and W5YI

According to the ARRL..If a candidate presents form 610 that includes a correctly
compeleted PHYSICAN'S CERTIFICATION of DISABILITY and PATIENTS' RELEASE
in Section 3, the VE team must accept that document as credit for element 1C (20wom) in
conjunction
with the applicant golding or passing any necessary written element credit(s) required for
an upgrade and after ensuring that the candidate has met the FCC's initial morse code
requirement
5 wpm.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 12/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 12 JULY AND FORECAST FOR 13 JULY - 15 JULY

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 11 Jul
Daily Proton Fluence >1 MeV: 8.1E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 7.7E+06 (normal)
X-ray background: B1.9
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
13 Jul 14 Jul 15 Jul
Activity Low Low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 13 Jul: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Unsettled

Estimated Indices : A K Observed A Index 11 Jul
Learmonth 9 2222 3232
Fredericksburg 11 7
Planetary 10 5

Observed Kp for 11 Jul: 1111 2221

2B. MAGNETIC FORECAST
Date Ap Conditions
13 Jul 12 Unsettled
14 Jul 12 Unsettled
15 Jul 8 Quiet to unsettled
COMMENT: Recent solar wind data indicates that the coronal mass
ejection caused by recent solar flare activity has not impacted
the Earth, and hence the predicted high levels of magnetic activity
for 12 - 13 July did not eventuate.

3A. GLOBAL HF PROPAGATION SUMMARY

Gee, I just thought it was a troll. Boatanchors in *context* makes perfect
sense and the meaning *is* clear. Let's see, I'm interested in old computers.
Let's go look under REC.RADIO.AMATEUR.??? I don't think so.

>>
>>Do you honestly, seriously believe that there'd be confusion that a group
>>named rec.radio.amateur.boatanchors would be about *computer hardware*?!

Let's take it one step further. Why would an alien race at least
a millenium ahead of earth in its technology still be limiting its
control system to binary logic? Just take the movie for what
it's worth - pure entertainment. KB7ET

My guess is that it's something really sinister, like a monitor screen
that would have reflected a flash or the photographers image.

Why don't you grow up a bit Jeff. Dave was almost certainly reading this thread in news.groups, remember it's been cross-posted between rram and that group?

>You still continue to condemn the name even though it has been shown
>repeatedly that that is the most natural choice.
Em, I must have missed the -proof-, last I heard you had gotten two answers on your survey, one yes, one no.

> I'm beginning to believe
>that you've dedicated your life to making sure that group never becomes
>a reality!
No, you and the others who want it your way, your name, no changes, period; are doing the job very nicely. You notice the RFD -still- hasn't been released, after what 2 months? My guess is the folks over in Group Name Advice don't like the name and aren't agreeing with your, eh reasoning. If they -really- don't like the name, it just doesn't happen. Trust me. I've been through this before with newsgroups I was proponent for.
If the name 'boatanchor' is important to you, what's wrong with "alt.ham-radio.boatanchors"? It would take about 30 seconds to get that group set up. My news-server shows 22 newsgroups in the alt.ham-radio.* hierarchy.

Gary is right... you only need a screwdriver and soldering iron. I just received my GROL, and it is good for maintaining marine and aviation equipment, as well as operating that equipment. Various land-mobile equipment (CB, police, taxi, etc) does not need a "certified technician" any longer. Of course, equipment still must meet specs and not cause interference... so the employers may DESIRE their techs to have a GROL or a college degree (or equivalent experience).

Too much trouble for the chap to turn it off for the photo ?

I have to agree with Tom. The CQ covers are getting very tired.
I'd prefer to see some technical shots of homebrew equipment but I'm
sure that would bore most of the new breed :)
Actually, pics of various Ham activities would be appealing...
Break it up a little...there are plenty of facets to the hobby of which
various photos could be of interest to the masses.

----snip---

I seem to remember reading a long time ago that the type of pencil lead
mattered in these things. Way back then pencil leads actually were a
lead based compound. These days they are a graphite/clay mixture. Seems
that this foxhole radio needed the old fashioned type lead to get
proper rectification.

Anyone else remember this?

Then you must -really- be bothered by all those .misc groups out there. Unless, that is, you peek at the -full- name.

One possible future scenario:

"Is there a boatanchors newsgroup?"
"Yes, it's called rec.radio.amateur.<something.else>"
"Is this the group for discussing boatanchors?"
"Yep, this is it."
"Is...."

and so on, and so on...

|a reality!

There seems to be a fuss -- I hope not by the name advice people -- about
the use of the term 'boatanchors' under rec.radio.amateur. This is plain
silly. The amateur radio operators know what this means. I've seen some
group names under the rec.games hierarchies or under anime that make
absolutely no sense to me, but the people using them seem to be able to deal
with it, and new usenetters who know about gaming or whatever have no
trouble.

Well, new usenetters who are hams will find their way around 'boatanchors'
just as easily as around 'dx'. Give us some credit, for crying out loud.

Oh? Where's the RFD? I see someone claiming to be a proponent who
says he hasn't submitted it. Why don't you do something about getting
an RFD going. You've talked nearly three months now, and no RFD. Without
any RFD the group is never going to become a reality.

Why not just title it rec.radio.amateur.hot-air? Can you argue for
months over that name with no RFD too?

I think only all satellite comms where out. Phone was disrupted because
cities where gone! And I'm sure the aliens never even thought of
anit-virus software. Especially if they where running Win95, They
wouldn't be able to tell what was the virus and what was caused by the
bugs in the op system :)

If one assumes that the "modern" comms are satellite-based, that precludes
their use. The ploy is the old "if we use old disused forms of communications
they won't detect it." A moderately plausible assumption.

|> Also, please explain how someone using a small laptop computer can design
|> a program (virus) that will disable an alien spaceship's communications
|> and defense systems? And why would the aliens, who are obviously much
|> more advanced and intelligent then we are, given the size and

|> into this as a way to expand their market? Just Kidding.

If I were a Mac person, I could expound on its legendary capabilities, but
I'm not so I won't. Obviously The Fly was an MIT genius, so it follows that
he would be able to figure out how the aliens' systems worked. Do you think
that Computer Scientists tell the other folx EVERYTHING???? 8-}

As for Norton Utilities, they've been useless and bloated ever since Symantec
took them over. A real shame.

Remember, just ONE bit could bring down an entire network. Ask the stock
ticker folx at the NYSE. One instruction, using greater-than instead of
greater-than-or-equal-to, knocked it out for a few days.

Given the hive-nature of the aliens, and their telepathic communications,
it would be plausible to assume a distributed-mentality social organization.
Remember the Borg from ST-TNG? Therefore, it would follow that computer
viruses would not be generated, since they are One. Add to that the
attitude of invincibility, and you have an insecure environment. Perfect
breeding grounds for such things as viruses.

Whole civilizations have fallen for insignificant reasons. The behemoth
may not notice the ant, but the ant's sting may cause the behemoth's
fall.

|> I thought this was a DUMB movie. Then again, I went and say Congo, and
|> Species. A trilogy of dumb movies. I will learn. Save your $5.50 and see

|> a good movie or stay home and watch the sunset. Much more entrertaining.

Movies are what the audience makes of them. It whelms the senses, and
(hopefully) stirs the mind. Yes, there are mistakes. Yes, there are
inaccuracies. I've never seen an accurate portrayal of exactly how
computers operate in any movie. OR radios for that matter!!!!!

It may be a dumb movie, but who's making the hundereds of millions of
dollars, hmmm?

Entropy continues despite Man's feeble attempts.

I believe you. Us "young'uns" can't measure up to such feats. However,
in the mid-1970's when I was in graduate school in Las Cruces, NM, I used
to handle traffic for MNM (which became SWN), taking it up to TWN and
back. I am blind; my normal style is to copy messages in Braille.
However, I did not always wish to carry a Braillewriter from my dorm or
office to the NMSU club station (then W5GB) so I'd carry a casette
recorder. I'd record the incoming CW messages. When I had to retransmit
them, I'd listen to the recording and send several characters behind using
an electronic keyer. Blew more than one person's mind who
watched/listened to me do it. Great fun!

Uh, my ignorance is showing again ... But what's a "swideswiper" or
"cootie key"? I've used straight keys, bugs, electronic keyers and
keyboards (hate keyboards) but am unfamiliar with the sort of key you
mention.

>With your obviously real handicap, would you not then be eligible for a Morse
>proficiency waiver (a real question, not trying to make a point)?

Hi Chris, I passed 13wpm before the accident and would be able to pass a multiple choice 13wpm test by writing fast and reading it later. I passed the Mensa test after the accident so I'm not all that handicapped. Although my speech processing rate was cut in half by the accident, it is still fast enough for the average Texan. :-) I hold an advanced class license so pursuing a 20wpm waiver is not worth the effort involved.

The point is, I am in a position to appreciate handicaps involving Morse code biological processing. There are a number of biological problems that contribute to lack of Morse code processing ability and since that ability is, IMO, an unimportant qualification (except legally) for becoming a general or higher, the present testing requirement is not logical.

I still enjoy CW at a comfortable 8wpm. Anything faster is just not worth the enormous effort that I must expend.

And Jay's comment addresses Ralph's statement, not the original question.
Ralph is one of the few folks who has been speaking out against the name BA.
But there is certainly no misunderstaning that a group titled
rec.radio.amateur.boatanchors would contain topics regarding old computers.

>>Do you honestly, seriously believe that there'd be confusion that a group
>>named rec.radio.amateur.boatanchors would be about *computer hardware*?!

>Obviously, he already did.

No he didn't; Ralph knows full well what was meant - he was one of the
participants in this name thread last month.

>>Note, in particular, that the original poster called it "boat anchors", not
>>the real name.

>To you, there seems to be a difference. To a lot of other people,
>there is none.

Still, the full newsgroup name should cause no confusion.

Hi!

I've tried to learn morse code for years, but never could. Eventually
I gave up. In an unrelated incident, I was diagnosed as having a
learning disability relating to memory (showed up strongly in learning
a foreign language).

In the last little while, I've picked up CB as the "path of least resistance"
for me. I've been enjoying it and have been re-considering Amateur Radio
and getting a license.

What are my options relating to Amateur radio? Will I be limited to
the Novice class (which I now understand is no-code)? Is there any
opportunity for someone with a documented disability to rise above
the code problem?

I don't really want to spend a lot of time and money if I'm going to
hit a barrier that I can't penetrate (code). Does the FCC have
any guidelines for a similar situation?

><SNIP>
>73, Cecil, W6RCA, OOTC

==========
I think Jim is correct, Cecil. Actually, you don't hear morse letters in this situation, just as you don't see letters when you are reading a printed text page by sight.

Somehow, the letters assemble into a word in both cases (copying code words and reading written ones), which your brain recognizes as a word unit, not a collection of letters.

I am sure this does not apply for EVERY individual, just as a rare individual will have severe reading difficulties in school, but it probably applies to the large majority of guys who have several hundred hours of copying medium speed CW behind them.

>
>Why not just title it rec.radio.amateur.hot-air? Can you argue for
>months over that name with no RFD too?

Hank, did you forget to eat your prunes again? Don't be such a grouch!
When Tale was advised of the name, he didn't care for it; since he's
the key person who controls the creation process, it was only natural
that some discussion would ensue regarding the name. The discussion
esculated somewhat, then died down. Now it's picking back up again.
So what? Got something better to talk about?

If the group gets voted down (during the CFV), then a second choice
would be to carry on BA discussions on rec.radio.amateur.equipment;

The Technician class is the no-code class of license in the U.S. galaxy
of amateur radio licenses. It requires the successful completion of
elements 2 and 3a, in laymans terms the novice and tachnician theory.
The Technician class of license grants all privileges on all U.S.
amateur frequencies above 30 MHz, which includes 2m and 440 MHz,
probably the two most popular bands used by U.S. hams. The only amateur
capabilities not available to the Technician class licensee are the more
traditional ham modes on the HF frequencies. If this meets your needs,
by all means follow up and get your license. The FCC requires that you
be able to pass element 1A (5 wpm) code for access to the HF bands.
Waivers can be granted in the case of handicaps for elements 1B (13 wpm)
and 1C (20 wpm), 1A cannot be waived. Hope this has proved helpful to
you in making your decision.

If I remember right the key is to have a selenium coated razor blade so that it will act as a rectifier (detector). Modern blades may not be selenium coated, I don't know. The idea of fishing into the wall might work...I took a mirror down in my bathroom last week and found several in the old location of the medicine cabinet!

Good Luck If all else fails you can probably replace the razor with a simple diode!

Hello everyone:

Patience is a virtue and evenything comes to those who wait.....

Now that th cliches are out of the way, I have received private e-mail
from the person who is the proponent, Rick Stealey that indicates that the
RFD has been filed and the process is underway.

Use the democratic process to voice your opinions! Be respectful of the
other person's views but state yours clearly and rationally. Some of the
discussion about Boatanchors name got a bit out of hand. Anyways, in
order to pass the CFV stage we need VOTES for the newsgroup. Most people
on the net don't know that they have a say in these matters but they
indeed do have a vote (or if they're from Boston, two or even three!)

I am going to marshall up some support in the ham radio community for this
newsgroup because I feel that it truly represents the amateur radio hobby
and culture as I like to practise it.

Ralph Lindberg & Ellen Winnie (dragonsl@scn.org) wrote:
: If the name 'boatanchor' is important to you, what's wrong with
: "alt.ham-radio.boatanchors"? It would take about 30 seconds to get that
: group set up. My news-server shows 22 newsgroups in the alt.ham-radio.*
: hierarchy.

Problem is, a lot of sites don't carry the alt.* hierarchy at all, which would keep some hams out of the discussion entirely. But, since you've already been a proponent, you already know that. So why even suggest it?

Last I heard, the proponent put out a followup to this thread, saying he was making some revisions and was resubmitting it.

This is ridiculous, aguing about the name at that level. Prefaced by rec.radio.amateur. there's no ambiguity at all.

One thing for sure, we, as hams, had better stick together on getting this group created. There will be enough opposition from the "professional NO voters" and others, when the CFV comes to pass.

REQUEST FOR DISCUSSION (RFD)
unmoderated group rec.radio.amateur.boatanchors

Newsgroup line:
rec.radio.amateur.boatanchors Collecting classic amateur and military radios.

This is a formal Request For Discussion (RFD) for the creation of a
world-wide unmoderated Usenet newsgroup rec.radio.amateur.boatanchors.
This is not a Call for Votes (CFV); you cannot vote at this time.
Procedural details are below.

RATIONALE: rec.radio.amateur.boatanchors

The term "Boatanchors" refers to older (usually more than 25 years old)
radios used by amateur radio operators. Boatanchors apparently was
derived from a term meaning an item that was no longer useful and
its primary function being that it could be used to hold a boat from
drifting. Today, the term is universally understood by hams to mean
radios that have a nostalgic value to collectors. Thousands of hams
got started with their hobby using these grand old radios of the 50's
and 60's. They may have built them from kits, or converted discarded
military surplus equipment. Hams who have an interest in this fine
old equipment have adopted the term boatanchors to describe it
lovingly.

Within the amateur radio service a number of terms are used which are
unfamiliar to those outside of the hobby. This is not unlike other
special interest groups. Within amateur radio, long distance contacts
are referred to as DX, low power operating is QRP, confirmation
cards are QSL cards. No other terms could possibly be used by hams
in these cases to define the item. In the same manner, boatanchors
has come into meaning and is now universally understood.

There is increasing interest in boatanchors by hams. There is a
mailing list that has been in existence for several years called
the boatanchors list. It has had as many as 1000 interested users.
This confirms not only the size of the interest in boatanchors
but the acceptance of the term. The proposed newsgroup is not
intended to replace the mailing list but rather to augment it by
providing a Usenet forum for similar discussions. Many people, for a
variety of reasons would rather use netnews rather than a mailing list
for discussions.

Currently discussions involving boatanchors are held in rec.radio.misc
and swap offers are in rec.radio.swap. The volume of traffic in both

newsgroups has grown significantly recently such that boatanchor discussions are most appropriately held in a separate newsgroup. Swap activity is currently in rec.radio.swap but due to the specialized nature of boatanchor swapping it often requires significant discussion instead of merely simple listing of items for sale and such discussions are not permitted in the charter of rec.radio.swap. In addition, rec.radio.swap is for all types of radios and the volume there has been so great recently that a separate newsgroup specifically for boatanchors is required.

An extensive discussion took place during April and May 1996 in news.groups regarding the suitability of the term boatanchors as a newsgroup name. Opinions are divided on the issue. This proponent believes that the term is acceptable, and since it is within the rec.radio.amateur hierarchy it is not going to result in confusion to non-readers of the newsgroup. Therefore, this formal RFD proposes the new newsgroup and invites discussion, pro and con. The RFD, CFV, and voting process are designed to settle such issues, and we are fortunate to have such a process in place.

CHARTER: rec.radio.amateur.boatanchors

This newsgroup is for discussions of classic amateur radio gear manufactured more than 25 years ago. Equipment of this category includes transmitters, receivers, and station accessories. Military equipment modified for use by amateurs is also appropriate for discussion in this newsgroup. Topics regarding equipment built entirely or primarily with vacuum tubes (as opposed to solid state) are welcomed in this newsgroup. Suitable topics may include collecting, modifying, tuning, obtaining parts, values of classic gear, sources for parts, questions and advice for others, and offers to buy or sell. Swapping is not a major part of the newsgroup but is permitted.

END CHARTER.

PROCEDURE:

This is a request for discussion, not a call for votes. In this phase of the process, any potential problems with the proposed newsgroup should be raised and resolved. The discussion period will continue for a minimum of 21 days (starting from when the first RFD for this proposal is posted to news.announce.newgroups), after which a Call For Votes (CFV) may be posted by a neutral vote taker if the discussion warrants it. Please do not attempt to vote until this happens.

All discussion of this proposal should be posted to news.groups.

This RFD attempts to comply fully with the Usenet newsgroup creation guidelines outlined in "How to Create a New Usenet Newsgroup" and "How to Format and Submit a New Group Proposal". Please refer to these documents (available in news.announce.newgroups) if you have any questions about the process.

DISTRIBUTION:

This RFD has been posted to the following newsgroups:

news.announce.newgroups, news.groups,
rec.radio.swap, rec.radio.amateur.misc

Proponent: Rick Stealey <rstealey@attmail.com>

>something-or-other. I know that GMDSS Maintainer and GMDSS Operator
>exams are now given, and that endorsements are still needed for shipboard
>RADAR. Other than radiotelegraph, which is on the way out, what license
>is needed for what job?

Largely, the new certifications are like the SAE auto exams, IE
Mr. Goodwrench gets to hang a plaque on his wall to impress
the customers. Aviation and marine techs are still supposed to
be certified, but everyone else simply uses the certification
to aid in getting a job or to impress their customers that they
know what they are doing.

The FCC now puts the entire burden for proper operation and
maintenence *on the station licensee*. He is free to employ
anyone he likes to operate or maintain his equipment, but the
licensee is *solely* responsible for proper operational and
technical performance. (In the old days, that responsibility
was shared with the station licensee by the licensed operators
and maintainers of the equipment.)

Now many licensees are non-technical, and have no way of knowing
if their equipment is operating properly, so they have to trust
their maintainer. The certifications serve to give them a sense
that their maintainer is qualified. But it does not relieve the
licensee of sole responsibility for the result.

With the current almost total lack of enforcement by the FCC,
the point is probably moot, but if some licensee is cited, he

can't shift the blame to his operators or maintainers anymore.
He has become the SPOC for the FCC.

The upside to this is that there is a lot less administrative
work for the FCC since they don't have to test, license, or
hunt down and cite operators or maintainers anymore. They just
go after the station licensee. The downside is that there may
be fewer responsible eyes and ears making sure stations operate
correctly, and since the FCC *isn't* doing proper enforcement,
some licensees have let technical quality slide.

The FCC has said that the market will take care of these stations,
IE if they offer bad service, their audience will abandon them, and
they'll fold. Maybe, but my experience is that the audience will
tolerate really bad technical quality before they'll abandon their
favorite programs. For services which aren't audience driven, the
licensee is the customer, and he has to become dissatisfied with
the performance his equipment is giving him in order for the market
to work, IE if his system isn't serving him properly he'll go to
another maintainer or another equipment provider.

That doesn't address station to station interference issues, however.
There's no market mechanism for that, so absent technically responsible
operators and maintainers, FCC enforcement activity is required to
solve that problem. But they aren't doing it. Instead they are looking
at spectrum auctions so that purchasers of spectrum can use civil
litigation to solve interference problems, IE sue emitters of spurious
for trespassing on their frequencies. That may work, but the courts
are slow, and lawyers expensive.

>gary@ke4zv.atl.ga.us (Gary Coffman) wrote:
>>I expect you'll have better luck with reflex copying. Using that
>
>Explain what that is please!

Reflex copy is just conditioned response. When you touch type, you don't think about what your fingers are doing, you just think about what you want to say and the words appear on the screen. That's because the typing action has become a conditioned response. It requires no conscious concentration to perform. It is done by the lower brain centers and the reflex systems of the brain stem and spine. These are the same systems that control walking, jumping, playing ball, etc. If you had to consciously think about each muscle's action, you'd fall over because the consicous mind would be overwhelmed by the level of detail required to be performed in realtime.

Sensory systems, such as the visual and aural systems, also have to do processing external to the conscious mind in order to avoid overloading it. If you had to think about every pixel illuminated in the eye, or every hair cell vibrated in the ear, in order to understand what you see or hear, you couldn't do it.

The eye, optic nerve, and visual cortex do distributed pre-processing before presenting the synthesized images to the conscious. This occurs due to conditioned responses in the visual system, IE you see what you have been conditioned to see. That's why there can be optical illusions. The pre-processors expect certain types of images and warp the data to fit the categories for which they have been conditioned. The same holds for the auditory system. Eastern music sounds like discordant noise to most Westerners because our auditory pre-processing systems have been conditioned to expect a different scale.

Now the interaction of sensory and motor systems also often has to bypass the conscious. If you had to consciously calculate a ball's trajectory and consciously command muscles to act to intercept it, you couldn't catch a ball. The pre-processors for the eye and hand communicate to each other at a low level through conditioned responses in order to let you catch a ball. The conscious isn't involved, except at the very high level of deciding that you *want* to catch the ball.

Ok, so the idea behind reflex copy is that the ear and auditory systems in the aural nerve trunk and midbrain must be conditioned to recognize the sound patterns that make up Morse, and the processed output should

trigger the motor reflexes to respond. All without conscious intervention. When you hear a Morse 'A', the little finger of your left hand automatically depresses the 'A' key on the keyboard. You don't think about it, you don't concentrate on it, you just let the conditioned reflexes of the body do it. Your conscious mind can be thinking about something else altogether while this is going on.

That's the key to Morse copy, DON'T THINK ABOUT IT!! Just let the conditioned subsystems of the sensory and motor systems do it. Now the only way to develop conditioned reflex is by DRILL. This is how you learned to touch type, and it is how you need to learn Morse Code copy.

During WWII, the Allies needed a large number of Morse intercept operators in North Africa. They recruited natives of the area for this job. These people didn't understand English or German (not that it mattered much since most of the traffic they were to intercept was in five letter code groups). But they were able to flawlessly copy at 40 WPM for hours at a time by reflex copy while chatting with each other in their native languages.

The way they were trained to do this is they were sat down at a typewriter (most didn't know how to type either), and told that when they heard a certain sound pattern they were to strike a certain key, and when they heard a certain different sound pattern they were to hit a certain different key. They were then drilled, in the same way you were when learning to touch type, until the action became an automatic condtioned reflex.

If drill is done intelligently, this doesn't take very long. If drill is done hap-hazardly, it may not work at all. Modern decoding theory can help you to design an intelligent drill regimen. You want to start by drilling letter pairs which have the maximum signal space distance (Hamming distance) between them. Examples are 'A' and 'N', 'W' and 'G', 'V' and 'B', 'F' and 'L', etc. Then tackle the bit inverses like 'R' and 'K' and 'E' and 'T'. Always drill in pair opposites until your fingers automatically hit the right keys. DON'T THINK, just do.

After you get the whole alphabet this way, start drilling triplets, selecting a pair plus a singleton from another group. When you can do this, move on to longer mixed strings until you can copy random five letter groups automatically. Note, repeat the same group until it is automatic, then add another group, and so on. You will not be able to do pure random mixed text at first.

Don't EVER try to copy plain text while you are drilling. That is sure to bring the conscious mind on-line and bollux up the works. This is *supposed* to be incredibly boring to the conscious mind. That's the only way to keep it out of

the way while you are developing the necessary conditioned
reflexes.

It's a Zen thing, you have to stay alert, but you have to
avoid thinking about what you're doing while you do it.
Having a pretty girl sit in front of me in typing class
helped in this regard. :-)

Once the necessary reflexes are conditioned, you may be able
to use the conscious mind to string together words as you
receive them, or perhaps not, people vary a lot in this area,
but you *will* get the copy down on paper (or computer screen).
As my old railroad telegrapher elmer told me time and again,
"It isn't copy until it is on the paper."

Pencils never used real lead, Pb, they have always been graphite
or charcoal. *Any* reasonably good conductor will serve, however.
A traditional cat whisker of copper, or a steel safety pin can
also be used.

You should *not* buff the blue coating off the razor blade. The
bluing applied to Gillette Super Blue Blades is selenium based,
and it is this selenium rectifier junction which serves as the
detector of this style radio.

Handwriting (and especially block printing) are usually too slow for
good copy. Use a typewriter (or computer keyboard). Most typists can
do at least 60 WPM (that was the minimum passing speed in my high
school typing class), so it is easy to stay abreast of code sent by
even the quickest operators.

Don't THINK, just let the body *do*. You want to be just a modem
(and not a Smartmodem(tm) either).

Gary,

Surely 60 wpm was not the MINIMUM passing speed! I believe that the minimum speed for our keyboarding class at Central Piedmont Community College is around 35-40 wpm. It might even be slower than that. I'll check when I return from vacation.

Best regards,
Lindsay

>"cootie key"? I've used straight keys, bugs, electronic keyers and
>keyboards (hate keyboards) but am unfamiliar with the sort of key you
>mention.

A Cootie key has a paddle that you wiggle left and right, *never hitting
the same side two times in a row*. Usually made from a hacksaw blade but
there was a commercial version available back in the late 20s by Brunnel,
I believe.

Here's how you'd send CQ DE KH2PZ:

LRLR LRLR LRL R LRL RLRL RLRLR LRLR LRLR
-.-. --.- -.. . -.- .... ..--- .--. --..

Unplug the paddles from your electronic keyer and wire the left and right
posts together; center conductor is hot and the left and right contacts
go to ground. Now you've got a Cootie. Spend a few hours or months practicing
with the thing prior to getting on the air.

One might be able to push 25wpm with a straight key, but as Joe points
out, you can breeze along at 40wpm with one of these simply-made marvels.

Jeff KH2PZ / KH6

Share ???????

Lets see how well a moon bounce station can hear a LEO
better yet how well can a LEO hear its target signal
when its front end is overloaded due to its being in the
transmited signal path of a high power EME or Metor scatter
station during a QSO ?

And then there would always be those, who with out 2M and 70CM
to occupy their time, would get some small measure of satisfaction
and pleasure, in hacking the control links and systems for these
Low Orbit Devices so they could watch a bit of fireworks on
re-entry.

Not to worry to much though, any communication industry that
picks on the amateur bands may just find out that. We as as
group significantly affect the purchase decisions of most if
not all of their hoped for customers. and we as a group, have
a long collective memory.

Oh by the way this is not an American only issue as the LEO satilites
are not geo stationary so they will be a bother to all the Hams
of the world.

5326. Satellite ATV?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-13 00:00:00 UTC

I was wondering if there is any fast scan ATV over amateur radio satellites? It seems like something
neat to do since it would be like running your own satellite network. It would give one an idea of what
the commercial satellite uplinkers do.

The General Radiotelephone (License? Certificate?) is sufficient. This is the one that was called the Second Phone. Those who held a First Phone (Broadcast) License were au;tomatically "downgraded!!!" to this lifetime license in a restructuring of the system years ago. This is the phone exam that requires technical knowledge. Under today's rules, you can fix just about anything except radar and avionics with this license. For shipboard radar, you still need the endorsement, and avionics is another matter altogether.

Gary: I know the system is largely a volunteer exam system similar to
the system the hams have, but just what are the licenses good for these days?
I held a Radiotelephone First Class License once upon a time, and that
was replaced by the Federal Candy Company with a General Radiotelephone
something-or-other. I know that GMDSS Maintainer and GMDSS Operator
exams are now given, and that endorsements are still needed for shipboard
RADAR. Other than radiotelegraph, which is on the way out, what license
is needed for what job?

The correct question is: "Can ANYTHING run Windows 95 glitch free?"
The correct answer, I suspect, is "NOPE!"

HURRICANE FREQUENCIES
(Unless otherwise noted, times are UTC,
freq in kHz, modes USB or LSB)
Revised July 12, 1996

The following hurricane season intercepts have been gleaned from numerous sources. Times and frequencies are subject to frequent change, and are listed for reference only. This issue of the list contains numerous updates, especially re hurricane hunter aircraft frequencies.

If you copy this list, credit the author. Do not remove update request and e-mail address. This is the only way I can keep the list updated! Thank-you to all who have so generously contributed information. A very special thank-you to Roger Pettengill of New York (rwp@westnet.com) for his extensive and valuable research. Enjoy!

Bill Snyder AA6KC

Whenever a hurricane is within 300 miles of land in the northern western hemisphere, the Hurricane Watch Net is operational on 14325. The Hurricane Watch Net provides communication between the National Hurricane Center and the affected areas.

During a communications emergency, W1AW transmits special voice bulletins on the hour on 01855, 03990, 07290, 14290, 18160, 21390 and 28590.

The National Institute of Standards and Technology broadcasts storm warnings on 2.5, 5, 10, 15 & 20 MHz AM according to the following schedule:
WWV hh:08
WWVH hh:38

Hurricane reconnaissance aircraft now operate primarily on US Global High Frequency System (GHFS) frequencies. Best frequencies to monitor are those guarded by McDill and Ascension. After initial contact on one of the published GHFS frequencies, listen closely for them to switch to a non-published discrete frequency to pass traffic.

Aircraft call signs are "GULL-nn" or "TEAL-nn" (where nn is a 2-digit number), and "NOAA-42" and "NOAA-43." The GULL and TEAL aircraft are type WC-130 based at Keesler AFB, Biloxi, MS. The NOAA aircraft are type WP-3D based at MacDill AFB, Tampa, FL. Look for the new NOAA Gulfstream IV-SP (tail number N49RF, call sign "NOAA-49") to make its debut this season.

WLO TSB broadcasts have apparently converted to a subscription-only basis; all references have therefore been deleted.

You really can help keep this list current by sharing your additions, corrections and deletions. Cite source and include detailed info.

The situations aren't quite comparable. When reading printed text,
the leading symbols don't disappear from view before you assemble
the word, with Morse, once a symbol passes it is gone. Try making
a mask that will only let you see one letter at a time and move it
over printed text at the rate of one character a second and see if
your mind still assembles the characters into words (and the words
into sentences) effortlessly. For me at least, written text doesn't
start to merge into seamless expression of ideas until the rate is
several hundred WPM. Below that, I *do* see the individual letters,
and reading is difficult.

I actually read at a couple thousand WPM and take in entire phrases
at a glance, but I can slow down to four or five hundred WPM when I
have to. It should be noted that the visual system has several thousand
times the bandwidth of the aural system, of course. One could make a
SNR analogy by saying that too narrow a signal in such a wide bandwidth
leads to a poor SNR, and hence to poor comprehension of the intelligence
being received.

I think the real problem a lot of people have is with the *slowness*
of the presentation of text when doing Morse. The mind evolved to

process aural intelligence at a rate of about 120 WPM. A tenfold reduction in rate makes the processing very different. Slow spoken text down to 12 WPM and see if you can still get coherent intelligence from it (don't Farnsworth the text either, slow the phonemes too.)

I think this is because the mind has evolved an analog of a finite length serial to parallel shift register with a nearly constant clock rate for processing aural information. If you present the serial symbols too slowly, the leading ones are clocked off the end of the register before recognition (parallel output) can occur, and all you get on the mental "bus" is gibberish.

(I read recently that the aural nerves operate at a rate of about 50 symbols a second, or 3,000 symbols a minute. Divided by the number of phonemes in human speech, that works out to about 75-120 WPM depending on the particular mix of phonemes in a given sentence.)

It apprears to be difficult for many people to somehow slow the mental shift register clock down enough to handle Morse symbol rates. It may be practically impossible for some. They have to set up a secondary cache in the conscious mind (a mental blackboard on which they temporarily "write" the text), or actually have to write the letters *down on paper*, in order to make sense of what was sent. (I have to do the latter.)

>I am sure this does not apply for EVERY individual, just as a rare
>individual will have severe reading difficulties in school, but it
>probably applies to the large majority of guys who have several
>hundred hours of copying medium speed CW behind them.

If you mean by medium speed 13-20 WPM, I think it is the rare individual who can seamlessly merge text characters into words in the mind. If you mean 40-60 WPM, then perhaps you are right. That's starting to approach the speed the mind evolved to handle aural intelligence. As the rate approaches spoken speech rate, then Morse really does just become an alternative pronounciation of the natural language being encoded. But again, it is the rare individual who can do Morse at 40-60 WPM, and none, or almost none, who can do it at the conversational speech rates of 120 WPM for which the brain's speech processor evolved.

We can't really use current amateurs as a guide to the ability of the general population in this respect because they have self-selected for the trait of being able to integrate aural Morse symbols into coherent text due to the entrance testing, IE those who couldn't do it, didn't pass the test and aren't amateurs (traditional type). If this were the only criteria, then the fact that amateurs are only about 0.25% of the population, and really Morse competent amateurs much less than half of that, could be a good indicator that these traits are rare.

Now if the above is true (and I think it is, at least in a crude analogous fashion), and if Morse is no longer vital to amateur operations (which I believe is self-evidently true), then the Morse tests have become inappropriate entrance criteria. (Note well that continued Morse *usage* by those with the necessary traits is a different matter, and remains appropriate for *them*. Testing isn't needed for that, of course, since they will self-select automatically, just as amateurs self-select for other modes of operation depending on their particular sets of traits and interests.)

Well, it is just a movie, but the choice of binary doesn't mean
the aliens are backward. *Our* first computers used ten level
decimal, but we changed to binary as we learned its advantages
for machine manipulation.

Given the described mental model of the aliens, however, I would
have expected their computers to be more integrated at the program
level, with much more cross checking, fault tolerance, and consensus
building than was displayed. IE at the program level I'd have expected
a high degree of "fuzzy logic" which would be resistant to alien (ours
in this case) code fragments.

This should have been natural to them since they would have to have
evolved to handle abberent individuals in their mental gestalt, else
one crazy alien would have driven the entire race mind mad millenia
ago.

5338. 15V too much for mobile radio?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-13 00:00:00 UTC
From: adkinsg@piranha.ianet.net
Message-ID: <4s7cao$deo@piranha.ianet.net>
Source record: 221229
Cross-posted to: rec.radio.cb,rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.homebrew

Hi!

I recently found a 24VDC power supply in my garage that
came from an old monitor. I think I'm going to use it
to power a cheap little radio for base station use. (It's
a mobile radio, btw)

I'm thinking along the lines of using one of the TO-220 case
voltage regulator (maybe adding some big caps for ripple)
to bring the 24V down to 12 or 15 volts. My concern is that
12V may not be sufficient for full power transmit since the
radio expects 13.8. (The radio only pulls 1.5A at max
modulation, so it doesn't need a ton of juice)

There is a very common 15v regulator available, would that
be too far above the 13.8? I'm not aware of any 13.8v
parts.

Any help much appriciated!

>
>I was wondering if there is any fast scan ATV over amateur radio satellites? It seems like something
>neat to do since it would be like running your own satellite network. It would give one an idea of what
>the commercial satellite uplinkers do.

None of the current amateur satellites have the transponder bandwidth
or power necessary to do fast scan ATV. SSTV is possible, however, but
it is discouraged because it is a constant carrier mode and hogs the
shared transponder's power from other users.

You'd need a 22 MHz wide transponder to do the FM TV that the commercial
TV satellites do. Even VSB requires a 6 MHz transponder (and lacking
the FM enhancement factor, would need lots more transponder power to
achieve an equivalent baseband SNR).

Funding for the program's transmission and production expense was
provided this week by a grant from "The SWAT Team", users of the
N8DXB repeater, where "This Week in Amateur Radio" is heard in
Kalamazoo, Portage, and Battle Creek, Michigan, Sundays at 8:00 PM
on 145.17 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.

Hi Jeff, I don't seem to have any trouble with words that are separated by spaces and appear with all the letters at once. Gary Coffman suggested an experiment and I tried it. If I pass a one-letter window over the text, the problem shows up. I suspect when I see a word, I am recognizing it as a word concept, like konji. If an oriental person saw only one brush stroke per second, they might forget what character was being drawn by the time it was finished. I have no problem with someone reading to me as things come word by word. But if someone starts spelling words for me, I will guess what word they are spelling. If I'm wrong, I lose it. For instance, someone can spell "t" "h" "e" and I will think it's "the". But if it's really "therefore", I lose it entirely. Exactly the same thing holds true for CW. If someone sends "n" "a" "m" "e", I would expect their name to come next. If they are really spelling "nameplate", I will be completely lost. Before my accident in 1961, I don't remember having the problem. But I see people who have the same problem when there was no injury or the injury was so long ago they don't remember. My Morsely-challenged EE friend thinks he was dropped on his head as a baby, but we don't know what he was like before that.

As long as my work entails designing/programming, I function just fine. When I have to give a presentation, everyone says, "Texans sure talk slow, don't they?" Sure glad I'm not from New York.

You might be making a big mistake. I believe Icom and many other
manufacturers bailed out of GPS RXs a few years ago, so after sales
support may be a problem.

I've had a Garmin 75 for over a year now, mainly used in the 4WD, but
also used hand held, and more and more in the shack - great for pointing
VHF/UHF yagis to a target location.

What ever you decide make sure of two things;
1) It can be powered externally - batteries can be very expensive.
2) It can accept an external antenna - some GPS unit do not, and are
virtually useless inside the cabin of a vehicle or boat etc.

You can raise the voltage of the common 12 volt three terminal regulators (7812, LM340, etc) by putting diodes in series with the common terminal to chassis (note that you have to use an insulated mounting for the tab, IE a mica washer). 3 diodes will increase the voltage by 1.8 volts (0.6 volts per diode drop).

Note that the regulator will have to drop 10.2 volts to get from 24 to 13.8 volts. At 1.5 amps, that's about 16 watts. Heatsink it very well. A TO-3 cased regulator might be a better choice (again use a mounting kit, you can't ground the case). The added diodes need to be rated for the current as well.

Hmm, let's see. 24 VDC on the source, 1.5 amps, and 15 vdc out, and a to-220 case egh? I'd start saving for a nice service manual on that radio if i were you. When that regulator blows from the 14 watts you attempted to dissipate it may fail shorted and put 24 volts into your mobile. Either that or plan on some pretty fancy cooling system for that puppy, it's going to get screaming warm.

Take a look at the junction to case thermal resistance of the regulator you are planning on using and do a few simple calculations before you put this thing together.

Garry,

The LM338K variable voltage regulator (5A) should be OK for this
purpose; two resistors set the voltage for you. I use these to make
13.8v gel battery chargers and they work fine. BTW I float 12v batteries
across all my 13.8v supplies as a protection against regulator failure.
Makes a great UPS too! Don't forget the reverse connected diode across
the top of the regulator if you use it for battery charging - if the
device gets volts on its o/p with none on its i/p, like when the mains
fails, it blows. If you'd like the circuit I use, I'll snailmail it to
you.

Include a dropping resistor between the supply and the regulator to
minimize the voltage drop (and subsequent power dissipation) across the
regulator.

> KE4IKT

That's completely ignorant! Where have you been hiding? Contests and
Morse code??

I used spread spectrum radios on HF for years in the military. It
worked well, even with a secure voice module. What Hams would have
to do is ban AM (SSB), and FM, and use SS (probably FH) as the only
modulation method. It won't work if Hams are using 1930's technology
and 1990's technology. The ARS needs to be forced to modernize. We
have waited long enough for the ARRL to lead this modernization, now
it's time for capitalism to direct the needed political change.

Through my experience, I would say your fine either way... 12V and 13.8V have pretty much become interchangable without a problem. and if you have a tolerance of 1.8V, and there is no problem, then 15V should be no problem as well, after all, it's less of a difference than 12 and 13.8... As long as you're in the ballpark you should be ok. Just don't attempt 24V. :)

I would not suggest going much over 14 volts on a mobile rig. When I was 9X5PT,
I tried floating a charger on a car type battery to feed a FT101 (rated 13.8V, 20A)
My homebrew charger was RF sentitive, and was charging full blast all the time I
was transmitting. Both switching transistors failed, and I had to cut them out of
the circuit to get back on 220 V power. VE3BOZ had to ship me spares from
Canada.... Small print in the manual quoted a 14 volt MAXIMUM input voltage for
the rig. So I would get a BIG 15 volt zener and float it on that output, and use a
fast acting fuse in series, as well. If your supply has 220-110 volt input, you
could feed it 120 volt and switch it to 220 volt mode, also. Or else remove filter
capacitors etc. to get it to lower voltage output.

You have to take theory (written) tests your learning disability may prevent this.

> What are my options relating to Amateur radio? Will I be limited to
> the Novice class (which I now understand is no-code)? Is there any
> opportunity for someone with a documented disability to rise above
> the code problem?

No, novice requires code at 5 words perminute, and there is no way around this.
technician class requires no code....but you must pass 2 written tests (see above)

> I don't really want to spend a lot of time and money if I'm going to
> hit a barrier that I can't penetrate (code). Does the FCC have
> any guidelines for a similar situation?

yes, you can get a waiver of code requirements, but NOT the 5 wpm level you need for novice class.

I suggest you find a local ham to explain your options.

The book titled " Radio / Tech Modifications published by ARTSCI, Inc at
818-843-4080 will have the modifications you are interested in. The
modifications for the 28 and 229 are completely different and should not be
applied to the 228 H. There were 2 versions of the 228 H so you will have to
look at the serial number, early versions required addition of a SMD diode
where the later versions only required a solder bridge be applied.

If your club publishes a newsletter I would greatly appreciate being on its mailing list. Ideally I would like to receive the articles by e-mail.

Why you ask? My ham radio web page at http://www.sarrio.com has a section devoted to ARC newletter articles that would have a universal interest to hams throughout the world. So many of these articles are outstanding and should receive a broader audience. At my site I presently have articles covering:

1. The proper operating guidlines to access Mir.
2. How US solder (ham) in Bosnia hams uses CW.
3. How VHF Repeaters are linked in the Yukon
4. A beginners guide to buying ham gear.
5. A CW poem that you must hear.

If you have a newsletter that carries articles that would be of interest to hams universally, then I am also interested in publishing it with credit of coursr given to the author, club, plus either and an e-mail or web hyperlink from the article back to your club's web site or club's e-mail address. I am interested in your club's articles even if your club has already put them on their own web site.

GREG GODSEY, KF4BDY: WHAT REALLY HAPPENED

Ever since young Greg Godsey, KF4BDY, of Hopkinsville, Kentucky, was arrested in his hometown on charges related to his hobby, rumors about the case have abounded on the air and via the Internet. Godsey, an articulate and soft-spoken youth who turned 17 in June, says he'd like to set the record straight.

Godsey was detained by Hopkinsville Police on May 11 and charged with carrying a scanner that could receive police radio frequencies, with impersonating a public official and with disorderly conduct. His Radio Shack HTX-202 2-meter transceiver was confiscated, and he was bound over for trial on June 4. ARRL Regulatory Information Branch Supervisor Norman Bliss, WA1CCQ, said at the time of Godsey's arrest that the Kentucky law exempts equipment that is capable of receiving police frequencies when it's in the possession of a licensed Amateur Radio operator. Furthermore, the HTX-202 does not have expanded receive or transmit capabilities.

In court on June 4, the judge dismissed the scanner charge, and Godsey's H-T was returned to him. Godsey said the scanner charge was dropped after his lawyer presented documentary evidence that the radio could not operate outside Amateur Radio frequencies. The other charges were continued until June 27, but that court appearance subsequently was postponed because the arresting officer was out of town in a training program. He has since returned to his regular duties. Godsey said he'd learned from an inside source that the arresting officer was placed on "desk duty" for a week after he arrested the teenager, but he did not know if this was related to the handling of his case.

Godsey said he returned his H-T to Tandy after he discovered that the battery case had been damaged, apparently while the unit was in police

custody. He said he wanted to see if it could be repaired, and he wanted additional assurances from Tandy that the unit could not be operated outside the ham bands "just in case" the question were to arise again in court. Godsey's parents, Gary and Fredericka Godsey, say their son has never been in trouble before. They've hired a new attorney to handle future action in the case.

Godsey said he's not sure why he was charged with impersonating a public servant or with disorderly conduct, but he thinks the former charge could be related to his activities as the emergency coordinator for Christian County, Kentucky, a position he continues to hold. "I'm still plugging away," he said. (It was erroneously reported in The ARRL Letter, QST and elsewhere that Godsey had resigned as EC. He did turn over his net control duties to another ARES member after his radio was taken away, however.) When the officer stopped him, "I showed him my ARES identification card," said Godsey, who was riding a bicycle at the time. He said his arrest came after some youngsters stopped him and said their father wanted to speak with him. Godsey said he'd never met the people before and has no idea why they called the police. An enthusiastic ham who got his ticket less than a year ago, Godsey said he enjoys "talking up" ham radio to people he meets in and around his home town, located in farm country about an hour's drive from Paducah. Godsey is home-schooled and is the equivalent of a high-school junior.

Godsey says it's frustrating for him to hear the rumors and distortions on the air. As a Technician Plus licensee, "I can't get up there [on HF] to dispel the rumors," he said. He has attempted to correct misstatements he sees posted on the Internet, however.

His arrest has had at least one positive impact. "ARES membership has been going up since this happened," Godsey reports. The local ARES chapter now has 22 members in a county with 130 to 150 hams.

I *really* wasn't going to add anything to this thread, but since *MY*
interpretation of the name "boat anchors" refers to old ham rigs (and
computers), I think such a newsgroup would be quite unique as it covers
items which are or can be considered as COLLECTORS ITEMS!!!!

I'd have no problem with the name rec.radio.amateur.boatanchors or whatever
name is used. Ralph, take a chill pill, will ya?? Sheesh!!

Just my $.02 worth.....

Have you ever heard of the HandiHams system?? I became a member over a
year ago (although my dues are past due), and although I've never been to
Radio Camp (yet!), I've never regretted joining this WONDERFUL organization.

> In the last little while, I've picked up CB as the "path of least resistance"
> for me. I've been enjoying it and have been re-considering Amateur Radio

> opportunity for someone with a documented disability to rise above
> the code problem?

Unless you happen to pass a code test of some kind, all you will need to
do is pass the Novice AND Technician written exams. NO CODE TEST
NECCESSARY!!!!

And with the vanity callsign program now open (finally!), you may only
have to be stuck with a "newbie" call for only a brief period of time.

> I don't really want to spend a lot of time and money if I'm going to
> hit a barrier that I can't penetrate (code). Does the FCC have
> any guidelines for a similar situation?

There are MANY ways VE's can administer the code test. I think I'll let
the person at HandiHams take over and answer this question more specifically
than I can.

Look forward to hearing you on the bands real soon!! :-)

73's for now my friend!!

Aww...Gee, Steve. Give us challenged people a break, will ya?? For some of us, just learning the theory (and passing it) can be a big enough challenge.

Yes, yes, I have heard of quadri-plegics being given exams even at bedside, but cut us SOME slack and give us SOME credit. Sheesh!!

Just my humble opinion.....

Wow! We made it.
I just want to say "THANK YOU" to all of you who supported the proposal the past few months. You were great, really great. Especially Michael Crestohl and Jeff Herman who gave great support in the discussion and privately in e-mail. I wish you could have seen all that went on behind the scenes. I met Michael in Dayton, and we presented a program (well Michael did 95 % of it) on the internet in which we pitched the proposal.

For the most part I remained on the sidelines and let the discussion about the name "boatanchors" run its course. There were over 200 postings on the issue so there is a lot of interest out there in the shacks, I know. In case you don't remember, I was not permitted to publish the RFD until it was approved by uunet. Yesterday (I appologise for the delay) I rewrote the proposal (while Bertha stormed up the east coast and I couldn't get outside to work on the tower) strengthened the part about the name boatanchors and resubmitted it. To my complete surprise tale published it immediately. His auto e-mail said he was on vacation so either he did it on his way out the dorr or others at group-advice may have done it. Either way I say thanks to you great guys also.

Now let me remind you. All of the discussion in April and May needs to begin again. Not necessarily on the name boatanchors but on the establishment of the group itself. Read the RFD carefully, consider all the facts, participate in the discussion. Watch for the CFV and then please VOTE (especially if you vote yes, hi!).

With luck and a bunch of yes votes we will have our beloved boatanchors group before the snow flies here in New Jersey where Bertha just blew through.

Welcome to the RFD. Now please POST A FOLLOWUP!!
Followups should be posted to news.groups (where they count the most) and cross posted to rec.radio.amateur.misc. If the folks in rec.radio.swap don't mind, cross post there as well but it might be best if we didn't clutter it up with non swap discussions.
You decide, but if we get objections there then check your cross posting header line.

I think the point the man is trying to make is that whilst Chet Atkins
and Ronnie Milksap are famous in the USA they are not exactly household
names in the UK. Probably because C&W has a minoroty following here.
There is a sort of UK equivalent but I don't suppose that Adge Cutler,
the Singing Postman or Eddie Grundy ever had callsigns.

I wonder what is the point in requiring type acceptance for
manufacture, if any guy with a soldering iron can "accidentally"
replace the small output tube with a 4x1000 "by mistake". Obviously,
NOBODY would be responsible for this "error" and the user, who is not
technically qualified, can logically claim he never knew he was
transmitting a KW. Looks like no one has to be responsible for the
"error", doesn't it? I bet lots of these "errors" start happening.
Nobody has a license to lose, and therefore CAN'T be disqualified from
repairing them in the future.

This isn't that hard to figure out folks: the LICENSEE of the transmitter is required to follow all applicable rules/regs for the radio service they are engaged in.

Granted, the CB service is plagued with violators, and little is seen in the way of enforcement from the FCC. But that is not the case in most of the other radio services (those that are still required to have a current, valid license). Read the FCC's Daily Digest sometime and note how many fines are being issued to commercial radio and TV stations (mainly due to operating violations, not technical).

Broadcast stations, and land mobile radio services, take technical operating requirements very seriously. Your local police department isn't going to take their vhf/uhf repeater down to Joe's Truckstop for maintenance... they're going to take it to a REPUTABLE 2-way service shop... with TRAINED electronic technicians (whether they hold a GROL or not).

The same is true for industies who do "in-house" servicing of their electronics. Nowadays, they will seldom even hire someone for an apprenticeship program... they hire either experienced technicians or recent college graduates, so that they will have a minimal of on-the-job training. They want to be confident that their equipment will be

kept within specs to avoid FCC fines or possible loss of their business radio license.

"Type-acceptance" is altogether different from this topic. It is required so that the manufacturers produce equipment within acceptable standards for use in the respective service at the time of the sale. Its not required to "stay acceptable" indefinately though! That's the responsibility of the LICENSEE.

Best regards, Stan/KD9BE

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N2AU & Inside DX, K4CEF, KQ4GC, KR4UJ, N4UCK, WB4RMJ, WA5YKO, KD8JN, W9JOO & Island Hopper, K0HB, W4/YV5DTA, DL6ET, G4BUE & DX News Sheet, G4BWP, HA1AG, JH1HRJ, PS7AB and SV1CIB and for the following DX information.

4M, LOS MONJES ISLAND (Venezuela). Steve, W4/YV5TDA, reports he will be going home for the CQ WW RTTY Contest this upcoming September. He will operate as Single Op/Single Band (20 meters) from SA-016 and use the callsign 4M1I. His dad, Luigi, YV5ENI, will accompany him to the island and will take care of all IOTA lovers on SSB. Steve will do CW before the contest and maybe some satallite. If the transportation to Los Monjes fails, Steve will go to La Tortuga (SA-044) and use the 4M5I callsign. QSL via I2CBM.

5A1A QSL CARDS UPDATE. Bart, K4CEF, supplied OPDXB with the latest on Toly's 5A QSL situation direct from W4BRE. As of July 11, 1996, everything is right-on-schedule for the QSLing of the July, 1995, 5A1A operation. Toly, naturally, has all the original copies of the paper logs, and after a hard-drive crash after Dayton, he has gotten all the QSOs re-entered. A copy of the original paper logs and the computer disks have been sealed with the Ukrainian Customs Seal and were sent to N4AA, EXPRESS MAIL early morning July 11 for a 4 to 6 day delivery. Toly has all your cards sent long ago to the original OM and LZ QSL Managers and has started answering these cards as of 7/11/96. ADDED NOTE: All OPDX InterNet Subscribers will receive the complete press release as an added bulletin.

8J1SEA, SPECIAL EVENT STATION (JAPAN). Station 8J1SEA will be active on the air for celeberating the new Japanese national holiday "Sea Day", July 20th. Operations will be from July 19th, 0000z to July 21, 0800z. The station will be located in the Odaiba-Kaihin Park on the Tokyo Bay, Minato-ku (Ward), Tokyo. Operations will be on CW, SSB and Satellites with activity on 80-10 meters (possible 160), and VHF/UHF. Contacts for

DX stations will be made mainly on 17/20/40 meters (SSB/CW) from 0900 to 2200z, because of propagation conditions.

AFRICAN DXPEDITION (D6/FH, Comoros and Mayotte). Look for Maike/DL4XS, Dieter/DL3KDV and Mirko/DL6ET to be active from Comoros, August 22nd to September 3rd. After their time there, they will travel to Mayotte to be on the air until September 11th. Their callsigns will be issued upon their arrival at Comoros and at Mayotte they will be active as FH/homecall. The group plans to be active (with good antennas) on all HF Bands on CW, SSB and RTTY, with a major emphasis on the lowbanders, including some serious operations on 80 and 160 meters. QSL to DL4XS via the bureau or direct. Please note that the CallBook entry is no longer valid. New Adress is Maike Stargardt, Friedrichsthal 21, 51688 Wipperfuerth, Germany.

DEVOTED BULLETINS FOR CHASING ISLANDS......
Art Hubert, N2AU, and Terry Long, W9JOO, have worked together to write the "Island Hopper" (bi-weekly) and "Inside DX" (weekly) bulletins for IOTA, DIE... etc, chasers. For a sample copy or subscription information send a SASE No. 10 envelope to:
Island Hopper - Terry Long, 1385 Hauptstrasse, Berne, IN 46711-1710
Inside DX - Art Hubert, 436 N. Geneva Street, Ithaca, NY 14850

"Island News" (twice each month) by Vance Le Pierre, W5IJU. For details on subscription, Vance can be contacted via InterNet E-mail at: vlepierre@delphi.com

"DX News Sheets" (50 weekly issues) by the Radio Society of Great Britain (RSGB). Details on subscription, write to RSGB, Lambda House, Cranborne Road, Potters Bar, Hertforshire EN6 3JE.

DX WEB SITES.....
Mike D'Alto, N3KFN, has a fantastic DX home page which contains a ton of DX related information/links at the URL address:
http://www.geocities.com/CapeCanaveral/1641/

Herb, WA5YKO, reports the WEB's largest page relating to DX is located at: http://applink.net/tejas/dx.html

Checkout "9K2HN/P DXpedition to Kubbar Island (AS-118) at:
http://www.kuwait.net/~morpheus/hamad/9k2hn.html

The World Wide Web Virtual Library Page for Amateur Radio has recently been updated. Features include: General Information, Organizations, Clubs, Callbooks, Callsign Search Engines, FTP Sites, Companies and Manufacturers. It's at:
http://www.meaning.com/pointers/wwwvl-ham.html

FO, CLIPPERTON ISLAND (Help wanted!). Interesting message was entered on CompuServe this past week from David, KE6WDL. He announces that he is both a ham (General Class) and a long-distance singlehanded sailor. David is in the early stages of planning a trip from Los Angeles to Panama, leaving this coming winter. Normally, he sails nonstop, but he may try

to make a landfall at a small, uninhabited atoll -- Clipperton Island -- about 600 nm SW of Mexico. The sole purpose of the landfall would be to set up and operate for a day or two. David is looking for help on several questions such as, how to obtain license for FO-land, how to land on the island and what is needed for DXCC? If you can help, David can be reached by E-mail at "71046.1647@compuserve.com".

KC6, BELAU. The DXNS report that Tosy, JA6VZB, is planning an end of the year DXpedition, possibly December 28th to January 5th as KC6VW with emphasis on 160 meters for Europe and Eastern USA.

OLYMPIC STATION W4O. Jim, N4UCK, reports that the 1x1 callsign W4O has been issued as the OFFICIAL Olympic Commemorative Station operating in Atlanta. Jim is the trustee/holder of the callsign and it will be in use through the Olympics into August. Please direct QSL per the instructions of the operator on duty at time of contact. Inquires can be directed to N4UCK.

OH0, ALAND ISLAND. This favorite European island will once again become very active. The DXNS report Matti/OH3MHT, and Retu/OH3NJV, will be active July 22-26th, as OH0MHT and OH0NJV, with an emphasis on SSB, 80-10 meters. QSL to home calls.
Meanwhile, Jorma/OH2KI, Seppo/OH1VR, Lasse/OH0RJ, Kari/OH3MT, Pete/OH3MEP (on RTTY) and possibly Dave/K8MN, will be active August 1-4th, CW/SSB and RTTY with activity on 160-6 meters. They will also make a TV show while there. Calls will be announced at a later date. QSL via OH1VR.

P5 UPDATE. Zoli, HA1AG, received the following message from Laci, HA0AW, (Sanyi's, HA7VK QSL Manager) on July 11th, were Sanyi, HA7VK, received the following letter from the Minister of PTT DPRK regarding his license application:
"Dear Mr. Sandor Csige,
On July 5th, 1996 I received your kind letter. Your letter informed me that you serve good purposes. However I'm required to inform to you that I can't give you positive answer.

Yours sincerely:
Kim Hak Sob
Minister of PTT"

However, Sanyi continues to establish a very promising relationship with the DPRK, so the P5 story has not ended just yet. Laci has asked to tell all not to send any P5 QSL requests to him. In the last couple of days he received dozens of QSLs to the following slim: P51VK, P57VK, HM0DX, HM1DX, and P51HA.

SV1, CYTHERA ISLAND (Greece). Andreas/SV1BKN, Dimitris/SV1CIB and Vasilis/ SV1DPJ will be active from this Greek island (IOTA EU-113) from July 20-25th. This island is located in the Peloponnisos South Group. Activity will be on all bands (160-10 meters) SSB/CW. QSL via the bureau or direct to: SV1BKN - Andreas Vlahos, Dimokratias 28, Voula 16673,

Athens, Greece or SV1DPJ and SV1CIB - Dimitris Lianos, P.O. Box 127, Arginion 30100, Greece.

W4, HATTERAS ISLAND (North Carolina). Just a reminder to all IOTA, Grid Square, and County Hunters, that Randy, KD8JN, will be on NA-67, Grid FM-25, Dare County from until July 20th. He will be signing KD8JN/4 de NA-067 primarily on SSB, with CW on request. Randy will be operating all bands, including WARC, except 160 meters. A special QSL will be available direct or via the bureau. Send an SASE (US), or an SAE and 1 IRC (DX) to KD8JN, Randall L. Phelps, 1226 Delverne Ave SW, Canton, Ohio 44710-1306 U.S.A.

UPCOMING IOTA CONTEST (July 27-28th) ACTIVITY.....
NA-076 - Paul, KR4UJ, and Steven, KR4DL, will activate Cedar Key as a Multi/Single entry. They will attempt to activate all bands just before and during the contest in mixed-mode.
NA-085 - Members of the Clay County DX Association will be active as AE4SJ from (FL007S) St. George Island, Florida, July 26-28th. Please QSL with SASE to Gary Young, 3331 Wilderness Circle, Middleburg, FL 32068.
NA-112 - Bill, WB4RMJ, and John, WB4NFS, the O'Mara brothers will be active from Bogue Banks (Emeral Isle), NC, July 21-28th. Operation will include 40, 30, 20, 17 and 6 meters (50.125 FM-14) SSB and CW. During the IOTA Contest, they will be signing W4IY/NA-112 on SSB and CW.
SA-029 - Look for ZX1A on CW and ZY1A on SSB to be active from Grande Island located in the Rio de Janeiro State West Group. QSL via PY1SL.
EU-124 - The callsign to be used for the contest on this Welsh island will be MW6Z (Mike Whisky six Zulu). This group activity is the same group which has previously signed GW5LP/P and were runners up in the 1995 contest. Also, this call is one of a series of 1x1 and 2x1 calls recently authorized for contests only by the RA. ADDED NOTE: M6Z (Mike six Zulu) was active in the IARU contest this past weekend. This is a new call for the group which previously signed GB4DX (and GB75DX). The GB4DX call will continue to be used in contests where the M6Z call is not permitted (mainly RTTY contests which the RSGB failed to request from RA!!). QSL M6Z to G4BWP and MW6Z to G5LP.

YJ, VANUATU. Ron, ZL1AMO, who was recently active from the Fiji signing 3D2RW, has moved on to YJ-land and is now signing YJ0ARW. His unannounced activity has him active on the usual 20 and 40 meter CW frequnencies. Also, it suggested to watch for him on the WARC bands and the RTTY frequencies. His length of stay or next stop is unknown at this time. QSL via ZL1AMO.

Congratulations Rick!

Now, I'm seeing more and more Boatanchor gear being advertised on rec.radio.swap than ever before. I appeal to those of you who have such a piece of gear stored in the garage or attic *not* to toss it out thinking it's worthless by today's standards and no one would possibly want it. Someone somewhere *will* want it and will put it on the air.

One of the greatest features of BA radios is the ease of repairing them and bringing them back to life; the components are large and can been seen without a microscope (unlike today's state-of-the-art radios). A needed tube can almost always be found by posting a WTB ad on .swap, or checking the tube retailers advertised in the magazines. The lifespan of a tube can range from 5 years to 25 years; treat them with care and they'll burn for years. Note that tubes are still being manufactured outside The U.S.

Millions of these radios were manufactured over the decades; now discussions regarding them and those who love them will finally have a home (if you vote YES during the Call For Votes) on rec.radio.amateur.boatanchors.

Howdy Clueless. You can find approximate grid square for most Hams from
the Buckmaster home page at URL:

http://www.buck.com/cgi-bin/do_hamcall

I say approximate as they stated its based on your zip code. Buckmaster
also gives latitude and longitude.

For an exact calculation (which gets a little involved)

1. You need your latitude and longitude rounded off to the nearest
minute. A good map or a GPS reading.

2. Goto URL:

http://uhavax.hartford.edu/disk$userdata/faculty/newsvhf/www/my-grid.html

They saved me the trouble of typing it hi hi.

Also try search for Grid Square and find:

BUCKMASTER Callsign server - US, Foreign w/ grids, lat/long.
Geographic Name Server: Lat/Long lookup - Univ. of Michigan
Software: BD Lat/Long-Gridsquare Calculator (26k)

Info is at:

http://uhavax.hartford.edu/disk$userdata/faculty/newsvhf/www/my-grid.html

Good grid squaring

>College is around 35-40 wpm. It might even be slower than that. I'll
>check when I return from vacation.

Hey, I didn't go to a wussy school! And those were *manual*
typewriters too. :-) :-)

In the business prep track you had to take Pittman (120 WPM min)
and typing, and they meant you to be ready to step into an office
and go to work. In the industrial arts track we had a forge and
foundry course that really required you to hammer hot iron (hard
for me since I'd skipped some grades and was still a bit on the
small side). Nobody'd believe I was ever small now. :-)

The college prep track had the best chemistry courses I ever
took, better than the ones I took later at Georgia Tech. The
chem teacher was the sponsor of our school amateur radio club
too. I had a good adviser who let me pick a mix of courses outside
the honors track, and I took full advantage of it, from agronomy
to welding. Not bad for a hill billy Kentucky high school with
1500 students.

High school was a bit of culture shock, especially considering I'd
just come out of a one room grade school. It was an hour and a half
bus ride (when the roads weren't too muddy) to get to high school
from where I lived. I did all my homework on the bus so I could
get to the farm chores when I got home. But I figure it was good
prep for when I came down here to go to Georgia (100%) Tech, where
I met my first computer (all those rows of vacuum tubes and blinking
lights, it was love at first sight).

(Alas, Tech isn't 100% anymore, they've tried to turn it into a
damn liberal arts school. And computers are bland little boxes
that sit on the desktops of secretaries in place of an honest
Smith Corona.)

Oh, BTW, that reminds me, do you know how you can tell a University
of Georgia graduate has been using your word processor?

There's White Out on the screen. :-) :-)

Some time ago, I think about a year or so, someone
made announcement of an IP address that went to
UMICH.EDU and a grid square locator. The IP started
out as 141.212 but I dont remember the rest. Anyone
remember seeing that and what the complete IP is ?

Hello Garry:

Yes I would vote that 15 volts is a bit high for your radio.

There are voltage regulators that are adjustable in a TO-3 and TO-220 case, the TO-3 being preferable. I think the part number is LM323, its a 1.5 amp voltage regulator that can have its output voltage easly adjusted by a inexpensive 5K pot. Radio Shack has a short book on voltage regulators. And with 24 volts available it should had auto work. If you follow the pin out wiring corectley.

Or a regulated 12 volt power supply all ready assembled would save a lot of time, Radio Shack also has a low current unit available.

Hope you get ot all working.

Jay.

5406. Ham exam question

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-14 00:00:00 UTC
From: frenchy@travel-net.com
Message-ID: <4s9prg$svo@reaper.uunet.ca>
Source record: 221172

Hello my name is pierre. I was studying for a ham license and came
across a question that I couldn't understand because thay didn't
explain it in the text before the questions. The question is:

An audio frequency choke is different from a radio frequency choke in
that the audio frequency choke has:
1)few iron laminations or cores
2)many iron laminations or cores
3)a great thickness of dialectric
4)a thin layer of dialectric

Another question that confused me was:

Compared to an RF by-pass capacitor an AF by-pass capacitorwill have a

1)larger capacitance
2)smaller capacitance
3)larger inductance
4)smaller inductance

Any help on these two questions would be greatly appreciated.

Thanks in advance
Pierre.

The RFD for the rec.radio.amateur.boatanchors has been accepted by the powers that be and posted for one and all to read. My personal thanks to Rick Stealey, KT2Q for a fine-business job of crafting the document and dealing with the detractors, none of whom made any real sense, at least to me.

I have been a licensed amateur radio operator in both Canada and the U.S. for thirty years. Other than what I've learned from my involvement in the hobby I have no technical background. I have always enjoyed playing, tinkering, improving, troubleshooting, modifying and repairing tube-type receivers and transmitters. Now I particularly enjoy collecting and restoring them too. These Collins, National, E F Johnson and some of the older military rigs are old friends and it particularly pleases me that there is so much interest in these fine radios from other sources and it seems to me that the numbers of "boatanchor" enthusiasts are increasing. I judge this from prices I see on certain items at flea markets and that they sell a lot faster than they did a few years ago. And it seems only right - the "boatanchor" radios take us all back to a different time and thinking about ham radio. It is the boatanchor philosophy that I find most appealing. After all, the theory or operation is quite understandable and with a minimum of test equipment can be easily repaired or peaked up. The manuals actually explain how to troubleshoot and repair, not how to pack it up and ship it to Yaecomwoo at $85.00 an hour. No, boatanchors is more than an old piece of obsolete equipment to me - its a practise of the radio art that is right in line with the way I view my hobby and the way I want to be active in it.

The BOATANCHORS-LIST is a fine mailing list. I have been a subscriber for about three years and have assembled an achives that goes right back to the first posting dated August 13th, 1992. When the Listowner began charging a $12.00 annual fee I sent my check because in my opinion it was a bargain and continue to feel that way. Many subscribers were dropped because for whatever reason, didn't want to pay. Should some of you reading this comment feel that the mailing list is "elitist", you should be advised that the daily digests are available at no charge via ftp or through the WWW. No one is deprived of the mailing list. The amount of good technical information available to anyone interested, either by subscription or from the archives is in my opinion, encyclopedic!

I do not see rec.radio.amateur.boatanchors as a replacement or substitute for the mailing list. When the newsgroup is approved and starts operation I will participate. I feel that the two entities are separate forms of communication, each drawing on its own source of participants. In my

opinion they will not compete with each other but may compliment each other. The newsgroup will have greater appeal to folks just becoming aware or interested in older equipment; once the interest takes shape and focuses on a crtain area, probably the mailing list will become an added source of information.

I have read discussions in the past about the name "boatanchors". My views on this were well stated in the RFD. Inasmuch as it falls under rec.radio.amateur. it is inconceivable to me how anyone could mistake it for old computers or nautical accessories. Those who have never heard the term can learn a new one....boatanchorus heavimus.....metallica humongeous or whatever......

Think about it - the boatanchors philosophy comes closest to that of the "ham radio" fraternity of days gone by . . . experimentation and building/ maintaining/repairing.....a cameraderie......not as competative as it seems to be today what with some contest every weekend.....nice AM audio or the ease of understanding a DX station who has no knowledge of English but knows Morse code and its shorthand......and on and on and on.

Yes, boatanchors is the TRUE ham radio for some of us at least and a newsgroup is just the thing we need to introduce other hams to the wonders of an old tube-type radio. I can see no logical reason why this newsgroup should not be formed at the earliest possible opportunity. I, of course, will vote YES for its creation and I urge you to do the same. If you don't like the idea, well, don't read the newsgroup - there certainly are enough of them!

Good going Scott. Welcome to Ham Radio. You'll love it!! You can keep
track of your forthcoming call at URL:

http://www.lantz.com/htbin/cbs_today

and check:

http://www.phoenix.net/~biekert/callsign.html

Both are updated daily.

Hope to catch you on the air one day.

Best regards from San Diego

Most of the other posters have suggested various ways to use a linear
regulator to produce the 13,8 volts you want. National Semiconductor
makes a very simple *switching* regulator called the LM2576. These
parts come in 3,3v., 5,0v., 12,0v., 15,0v., and adjustable versions.
You woule want either the LM2576-12 (fixed 12v version) or the
LM2576-ADJ (adjustable adjustable). They come in a TO-220 package,
and are almost as easy to use as a 3-terminal linear regulator and run
a heck of a lot cooler. They produce a positive output, and the
heatsink tab is ground. The data sheet includes full application
information, including where to get the inductors (3 suppliers).

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 14/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 14 JULY AND FORECAST FOR 15 JULY - 17 JULY

1A. SOLAR SUMMARY
Activity: Low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 68/2

GOES satellite data for 13 Jul
Daily Proton Fluence >1 MeV: 2.9E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 1.5E+05 (normal)
X-ray background: A7.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
15 Jul 16 Jul 17 Jul
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 15 Jul: 68/2

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet to unsettled

Estimated Indices : A K Observed A Index 13 Jul
Learmonth 7 3222 2122
Fredericksburg 6 9
Planetary 5 6

Observed Kp for 13 Jul: 3112 2222

2B. MAGNETIC FORECAST
Date Ap Conditions
15 Jul 8 Quiet to unsettled
16 Jul 8 Quiet to unsettled
17 Jul 6 Quiet

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band

Date Low Middle High
14 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
15 Jul Normal Normal Fair
16 Jul Normal Normal Fair
17 Jul Normal Normal Normal

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
14 Jul 16

Observed Australian Regional MUFs:
Near predicted monthly values observed at all stations.
Some spread F was observed during local night at townsville,
with sporadic E conditions observed during local night at
Darwin and Sydney.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
15 Jul 10 near predicted monthly values
16 Jul 10 near predicted monthly values
17 Jul 10 near predicted monthly values

Hi Steve,
I'm not sure if this list is "all-inclusive" or not, but here you are.
Remember though: Q-signals are NOT intended for voice operation. Yes,
you hear them sometimes, but they were designed to simplify morse code
traffic handling, not voice. You will more likely confuse someone if you
use them on voice with the exception of the most common ones.

Best regards, Stan/KD9BE

AMATEUR RADIO "Q-SIGNALS"
FOR CW USE ONLY

QNA Answer in prearranged order.
QNC All net stations copy.
QND Net is directed.
QNE Entire net stand by.
QNF Net is free.
QNG Take over as net control station.
QNI Net stations report in.
QNM You are QRMing the net.
QNN Net control station is [call sign].
QNO Station is leaving the net.
QNP Unable to copy you.
QNS Following stations are in the net.
QNT I request permission to leave the net.
QNU The net has traffic for you.
QNX You are excused from the net
QNY Shift to another frequency.
QNZ Zero beat your signal with mine.
QRG Will you tell me my exact frequency?
QRH Does my frequency vary?
QRJ Are you receiving me badly?
QRK What is the intelligibility of my signals?
QRL Are you busy?
QRM Is my transmission being interfered with?
QRN Are you troubled by static?
QRO Shall I increase power?

QRP Shall I decrease power?
QRQ Shall I send faster?
QRS Shall I send more slowly?
QRT Shall I stop sending?
QRU Have you anything for me?
QRV Are you ready?
QRX When will you call me again?
QRY What is my turn?
QRZ Who is calling me?
QSA What is the strength of my signals?
QSB Are my signals fading?
QSD Is my keying defective?
QSG Shall I send messages?
QSK Can you hear between your signals?
QSL Can you acknowledge receipt?
QSM Shall I repeat the last message?
QSN Did you hear me?
QSO Can you communicate with me?
QSP Will you relay?
QST General call preceding a message.
QSU Shall I send or reply on this frequency?
QSW Will you send on this frequency?
QSX Will you listen?
QSY Shall I change frequency?
QSZ Shall I send each word more than once?
QTA Shall I cancel message?
QTB Do you agree with my counting of words?
QTC How many messages have you to send?
QTH What is your location?
QTR What is the correct time?

- --- BEGIN Linux AX25 HOWTO part 2/2 ---

shell
this is the login shell of any new users.

associate
this flag indicates whether outgoing AX.25 connections made by
this user after they login will use their own callsign, or your
stations callsign.

14.5. Configuring the pms

The pms program is an implementation of a simple personal message system. It was originally written by Alan Cox. Dave Brown, N2RJT, <dcb@vectorbd.com> has taken on further development of it. At present it is still very simple, supporting only the ability to send mail to the owner of the system and to obtain some limited system information but Dave is working to expand its capability to make it more useful.

Configuring the pms program is still a little clumsy at the moment because it is new but bare with it while Dave works on it. The only difficult part is modifying the source code to support your local mail delivery agent and whether you use the ttylinkd program or the talk-ax25 program.

After that is done there are a couple of simple files that you should create that give users some information about the system and then you need to add appropriate entries into the ax25d.conf file so that connected users are presented with the PMS.

14.5.1. Customising pms.c

If you take a look at the pms.c file in the ax25-utils package you will see that there a few items that you can configure. Perhaps the most important to configure is the one that allows you to specify what local mail delivery agent you use. In most installations the deliver program may well work, but in the minimal installation on my gateway

machine I needed to modify the line that previously said:

#define MAIL_DELIVERY_AGENT "deliver %s"

to:

#define MAIL_DELIVERY_AGENT "/bin/mail.local %s"

There is no easy way of knowing what local delivery agent your machine is configured to use, so perhaps you could simply look for either of these files in the obvious places and choose whichever seems to be there.

I also have the ttylinkd program installed, so I needed to modify the section relating to it. I keep my copy of the ttylinkd program in my /usr/sbin directory, so I modified the line that previously said:

/* #define MY_TALK "/usr/local/sbin/ttylinkd" */

to:

#define MY_TALK "/usr/sbin/ttylinkd"

If you use the talk-ax25 program then you would remove the /* and */ from around that line instead.

There is one last definition that might be useful to you, and that is if you have a default email gateway. This line is the line containing the string MY_GATEWAY. If you have an email gateway that you use, then you should remove the comments from this line and change the address to that of your gateway.

14.5.2. Create the /usr/local/pms/motd file.

The /usr/local/pms/motd file contains the `message of the day' that users will be presented with after they connect and receive the usual BBS id header. The file is a simple text file, any text you include in this file will be sent to users.

14.5.3. Create the /usr/local/pms/info file.

The /usr/local/pms/info file is also a simple text file in which you would put more detailed information about your station or configuration. This file is presented to users in response to their issuing of the Info command from the PMS> prompt.

14.5.4. Associate AX.25 callsigns with system users.

When a connected user sends mail to an AX.25 callsign, the pms expects that callsign to be mapped, or associated with a real system user on your machine.

You make this association with the axparms command. An example looks like:

axparms -assoc vk2ktj terry

This command associates that AX.25 callsign vk2ktj with the user terry on the machine, so any mail for vk2ktj on the pms will be sent to terry.

Remember to put these associations into your rc file so that they are available each time your reboot.

14.5.5. Add the PMS to the /usr/local/etc/ax25d.conf file.

Adding the pms to your ax25d.conf file is very simple. There is one small thing you need to think about though. Dave has added command line arguments to the PMS to allow it to handle a number of different text end-of-line conventions. AX.25 and NetRom by convention expect the end-of-line to be carriage return, linefeed while the standard unix end-of-line is just newline. So, for example, if you wanted to add an entry that meant that the default action for a connection received on an AX.25 port is to start the PMS then you would add a line that looked something like:

default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj

This simply runs the pms program, telling it that it is an AX.25 connection it is connected to and that the PMS owner is vk2ktj. Check the man page for what you should specify for other connection methods.
14.5.6. Test the PMS.

To test the PMS, you can try the following command from the command line:

/usr/local/bin/pms -u vk2ktj -o vk2ktj

Substitute your own callsign for mine and this will run the pms, telling it that it is to use the unix end-of-line convention, and that user logging in is vk2ktj. You can do all the things connected users can.

Additionally you might try getting some other node to connect to you to confirm that your ax25d.conf configuration works.

15. HOWTO link NOS and the Linux kernel networking software

Many people like to run some version of NOS under Linux because it has all of the features and facilities they are used to. Most of those people would also like to have the NOS running on their machine capable of talking to the Linux kernel so that they can offer some of the linux capabilities to radio users.

15.1. Linking NOS and Linux using a pipe device

Brandon S. Allbery, KF8NH, contributed the following information to explain how to interconnect the NOS running on a Linux machine with the kernel code using the Linux pipe device.

Since both Linux and NOS support the slip protocol it is possible to link the two together by creating a slip link. You could do this by using two serial ports with a loopback cable between them, but this

would be slow and costly. Linux provides a feature that many other Unix-like operating systems provide called `pipes'. These are special pseudo devices that look like a standard tty device to software but in fact loopback to another pipe device. To use these pipes the first program must open the master end of the pipe, and the open then the second program can open the slave end of the pipe. When both ends are open the programs can communicate with each other simply by writing characters to the pipes in the way they would if they were terminal devices.

To use this feature to connect the Linux Kernel and a copy of NOS, or some other program you first must choose a pipe device to use. You can find one by looking in your /dev directory. The master end of the pipes are named: ptyp[1-f] and the slave end of the pipes are known as: ttyp[1-f]. Remember they come in pairs, so if you select /dev/ptypf as your master end then you must use /dev/ttypf as the slave end.

Once you have chosen a pipe device pair to use you should allocate the master end to you linux kernel and the slave end to the NOS program, as the Linux kernel starts first and the master end of the pipe must be opened first. You must also remember that your Linux kernel must have a different IP address to your NOS, so you will need to allocate a unique address for it if you haven't already.

You configure the pipe just as if it were a serial device, so to create the slip link from your linux kernel you can use commands similar to the following:

```
# /sbin/slattach -s 38400 -p slip /dev/ptypf &
# /sbin/ifconfig sl0 broadcast 44.255.255.255 pointopoint 44.70.248.67 /
mtu 1536 44.70.4.88
# /sbin/route add 44.70.248.67 sl0
# /sbin/route add -net 44.0.0.0 gw 44.70.248.67
```

In this example the Linux kernel has been given IP address 44.70.4.88 and the NOS program is using IP address 44.70.248.67. The route command in the last line simply tells your linux kernel to route all datagrams for the amprnet via the slip link created by the slattach command. Normally you would put these commands into your /etc/rc.d/rc.inet2 file after all your other network configuration is complete so that the slip link is created automatically when you reboot. Note: there is no advantage in using cslip instead of slip as it actually reduces performance because the link is only a virtual one and occurs fast enough that having to compress the headers first takes longer than transmitting the uncompressed datagram.

To configure the NOS end of the link you could try the following:

```
# you can call the interface anything you want; I use "linux" for convenience.
attach asy ttypf - slip linux 1024 1024 38400
route addprivate 44.70.4.88 linux
```

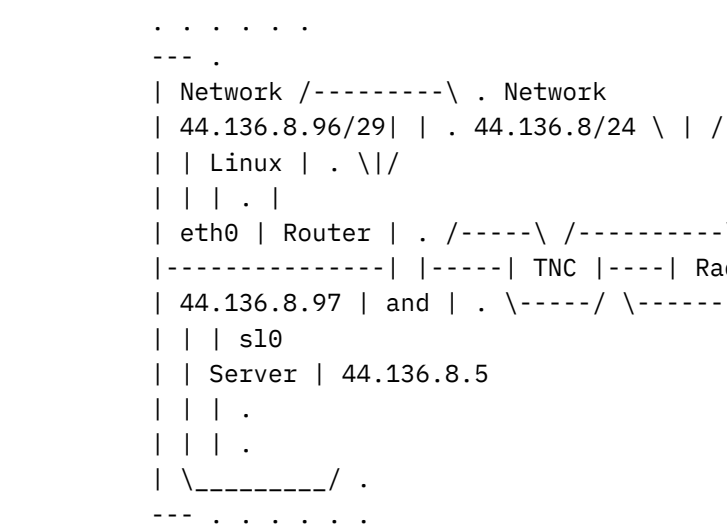
These commands will create a slip port named `linux' via the slave end of the pipe device pair to your linux kernel, and a route to it to make it work. When you have started NOS you should be able to ping and telnet to your NOS from your Linux machine and vice versa. If not, double check that you have made no mistakes especially that you have the addresses configured properly and have the pipe devices around the right way.

16. Some sample configurations.

Following are examples of the most common types of configurations. These are guides only as there are as many ways of configuring your network as there are networks to configure, but they may give you a start.

16.1. Small Ethernet LAN with Linux as a router to Radio LAN

Many of you may have small local area networks at home and want to connect the machines on that network to your local radio LAN. This is the type of configuration I use at home. I arranged to have a suitable block of addresses allocated to me that I could capture in a single route for convenience and I use these on my Ethernet LAN. Your local IP coordinator will assist you in doing this if you want to try it as well. The addresses for the Ethernet LAN form a subset of the radio LAN addresses. The following configuration is the actual one for my linux router on my network at home:



```
#!/bin/sh
# /etc/rc.net
# This configuration provides one KISS based AX.25 port and one
# Ethernet device.

echo "/etc/rc.net"
echo " Configuring:"

echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
```

```
echo " done."

echo -n " ethernet:"

/usr/local/etc/nrbroadcast

# ax25_name min_obs def_qual worst_qual verbose
4800 1 120 10 1
```

• You must have IP_FORWARDING enabled in your kernel.

• The AX.25 configuration files are pretty much those used as examples in the earlier sections, refer to those where necessary.

• I've chosen to use an IP address for my radio port that is not within my home network block. I needn't have done so, I could have easily used 44.136.8.97 for that port too.

• 44.136.8.68 is my local IPIP encapsulated gateway and hence is where I point my default route.

• Each of the machines on my Ethernet network have a route:

```
route add -net 44.0.0.0 gw 44.136.8.97 window 512 mss 512 eth0
```

The use of the mss and window parameters means that I can get optimum performance from both local Ethernet and radio based connections.

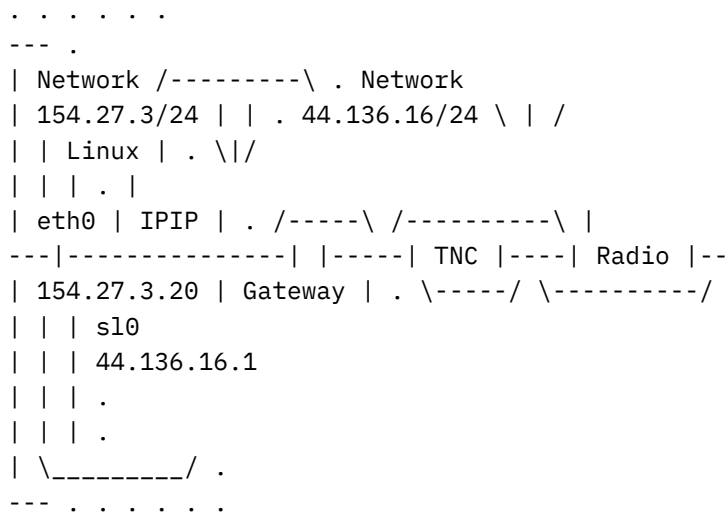
• I also run my sendmail, http, ftp and other daemons on the router machine so that it needs to be the only machine to provide others with facilities.

• The router machine is a lowly 386DX20 with a 20Mb harddrive and a very minimal linux configuration.

16.2. IPIP encapsulated gateway configuration.

Linux is now very commonly used for tcp/ip encapsulated gateways around the world. The new tunnel driver supports multiple encapsulated routes and makes the older ipip daemon obsolete.

A typical configuration would look similar to the following.



The configuration files of interest are:

```
# /etc/rc.net
# This file is a simple configuration that provides one KISS AX.25
# radio port, one Ethernet device, and utilises the kernel tunnel driver
# to perform the IPIP encapsulation/decapsulation
#
echo "/etc/rc.net"
echo " Configuring:"
#
echo -n " loopback:"
/sbin/ifconfig lo 127.0.0.1
/sbin/route add 127.0.0.1
echo " done."
#
echo -n " ethernet:"
/sbin/ifconfig eth0 154.27.3.20 netmask 255.255.255.0 \
broadcast 154.27.3.255 up
/sbin/route add 154.27.3.20 eth0
/sbin/route add -net 154.27.3.0 netmask 255.255.255.0 eth0
```

```
echo " done."
#
echo -n " AX.25: "
axattach -i 44.136.16.1 -m 512 /dev/ttyS1 4800
/sbin/ifconfig sl0 netmask 255.255.255.0 broadcast 44.136.16.255
/sbin/route add -host 44.136.16.1 sl0
/sbin/route add -net 44.136.16.0 netmask 255.255.255.0 window 1024 sl0
#
echo -n " tunnel:"
/sbin/ifconfig tunl0 44.136.16.1 mtu 512 up
#
echo done.
#
echo -n "Routing ... "
source /etc/ipip.routes
echo done.
#
# end.
```

and:

```
# /etc/ipip.routes
# This file is generated using the munge script
#
/sbin/route add 44.134.8.0 netmask 255.255.255.0 tunl0 gw 134.43.26.1
/sbin/route add 44.34.9.0 netmask 255.255.255.0 tunl0 gw 174.84.6.17
/sbin/route add 44.13.28.0 netmask 255.255.255.0 tunl0 gw 212.37.126.3
...
...
...
```

```
/usr/local/etc/axports

# name callsign speed paclen window description
4800 VK2KTJ-0 4800 256 2 144.800 MHz
```

Some points to note here are:

• The new tunnel driver uses the gw field in the routing table in place of the pointopoint parameter to specify the address of the remote IPIP gateway. This is why it now supports multiple routes per interface.

• You can configure two network devices with the same address. In this example both the sl0 and the tunl0 devices have been configured with the IP address of the radio port. This is done so that the remote gateway sees the correct address from your gateway in encapsulated datagrams sent to it.

• The route commands used to specify the encapsulated routes can be automatically generated by a modified version of the munge script. This is included below. The route commands would then be written to

a separate file and read in using the bash source /etc/ipip.routes
command (assuming you called the file with the routing commands
/etc/ipip.routes) as illustrated. The source file must be in the
NOS route command format.

• Note the use of the window argument on the route command. Setting
this parameter to an appropriate value improves the performance of
your radio link.

The new tunnel-munge script:

```
#!/bin/sh
#
# From: Ron Atkinson <n8fow@hamgate.cc.wayne.edu>
#
# This script is basically the 'munge' script written by Bdale N3EUA
# for the IPIP daemon and is modified by Ron Atkinson N8FOW. It's
# purpose is to convert a KA9Q NOS format gateways route file
# (usually called 'encap.txt') into a Linux routing table format
# for the IP tunnel driver.
#
# Usage: Gateway file on stdin, Linux route format file on stdout.
# eg. tunnel-munge < encap.txt > ampr-routes
#
# NOTE: Before you use this script be sure to check or change the
# following items:
#
# 1) Change the 'Local routes' and 'Misc user routes' sections
# to routes that apply to your own area (remove mine please!)
# 2) On the fgrep line be sure to change the IP address to YOUR
# gateway Internet address. Failure to do so will cause serious
# routing loops.
# 3) The default interface name is 'tunl0'. Make sure this is
# correct for your system.

echo "#"
echo "# IP tunnel route table built by $LOGNAME on `date`"
echo "# by tunnel-munge script v960307."
echo "#"
echo "# Local routes"
echo "route add -net 44.xxx.xxx.xxx netmask 255.mmm.mmm.mmm dev sl0"
echo "#"
echo "# Misc user routes"
echo "#"
echo "# remote routes"

fgrep encap | grep "^route" | grep -v " XXX.XXX.XXX.XXX" | \
awk '{
split($3, s, "/")
split(s[1], n,".")
if (n[1] == "") n[1]="0"

```

17. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the linuxnet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:
subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

18. Copyright.

*** The `Linux HAM HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux HAM HOWTO part 2/2 ---

Licensing/Copyright
GNU Public License vers 2.0., Commercial licensing available.

12. Training/Educational Software.

Software to assist in education or training for amateur radio. Morse
Code tutorials, technical examination database, Computer Based
Training software, and the like are listed here.

13. Miscellaneous Software.

Software that didn't neatly fit into any other category.

13.1. Linux for HAMS CD-ROM

Author
Bruce Perens, bruce@pixar.com

Description
A complete linux distribution on CDROM specifically designed for
Amateur Radio operators.

Status
Not yet available.
System requirements.
Linux compatible hardware, some software will obviously require
specialised hardware to operate. No additional software should
be required.

Detail
A complete Linux distribution specifically catering for Amateur
Radio operators. It will include a fully featured Linux
installationplus a range of amateur radio specific software such
as those listed in this document. Bruce has detail and updated
status report available at the LinuxForHams WWW page

<http://www.rahul.net/perens/LinuxForHams>.

Where and how to obtain it:
It isn't yet available, details will be made available when it is released.

Licensing/Copyright
GNU Public License.

Contributed by:
Bruce Perens, bruce@pixar.com

13.2. SunClock

Author
John Mackin, john@cs.su.oz.AU

Description
A clock that will show you instantly what parts of the globe are exposed by sunlight and what parts aren't.

Status
Released.

System requirements.
X-Windows.

Detail
sunclock is another of those desktop gadgets that most people think look nice but really don't have a lot of use for. I use sunclock to obtain an at-a-glance indication of the time anywhere in the world. In its iconic form it sits in a small Mercator projection. When maximised it produces the same image but obviously larger with slightly more detail. It also displays the date, local time and UTC. sunclock actually calculates mathematically what parts of globe are sunlit and which aren't, it seems quite accurate, so long as you assume the earth has no atmosphere.

Where and How to obtain it.
I haven't seen any precompiled sunclock binaries for Linux about, so check your nearest archie server. sunclock compiled straight out of the box for me.

Licensing/Copyright
Public Domain and may be freely copied as long as the notices at the top of sunclock.c remain intact.

13.3. Xearth

Author
Kirk Johnson, <tuna@cag.lcs.mit.edu>

Description
A rotating earth for X-windows root window. It has real life

shading, and options for geostatic view, and non geostatic view.
A prettier and more modern version of sunclock but requires a
bit more processing power.

Status
Version 1.0.

System requirements.
X-Windows.

Detail
xearth is a sophisticated program which draws a colour picture
of the earth onto your X Windows display. It offers either an
orthographic view as you would see from space or the map like
mercator projection. You have a number of options in determining
the behaviour of the view. The details are available from the
xearth Home Page <http://cag-www.lcs.mit.edu/~tuna/xearth/> and
in the documentation which is supplied with the package.

Where and How to obtain it.
The source can be obtained from its home site at cag.lcs.mit.edu
<ftp://cag.lcs.mit.edu/pub/tuna/> or just about any X11/contrib
directory.

Licensing/Copyright
Copyright (C) 1989, 1990, 1993 by Kirk Lauritz Johnson. The
copyright notice included states that xearth is freely
redistributable so long as the copyright notice is left intact,
and be included in documentation.

Contributed by:
Kirk Johnson" <tuna@kanchenjunga.lcs.mit.edu>

14. How to contribute or update an entry.

I'd like for this list to be as complete and up-to-date as possible.
So I'm keen to hear about any developments or products that I don't
already know about, or that the entry is obselete or outdated for.

What I'd like as a minimum set of requirement would be something like
the following:

Name
The name of the software in question.

Author
Who wrote, or ported the software. An email address, or some
other means of contacting them is also essential.

Description
A single line description of what the software does.

Status
An indication of the software's status. Is it still in testing?

Is it a production release? Is it still in the design stage?

System requirements
What does the software require to run? Does it require X-Windows? Does it need a soundcard? Does it need a certain version of kernel? Does it need other software to support it?

Detail
I'm not keen on including a large amount of detail on each piece of software as this would consume a lot of time reading and trying to keep up to date. So instead what I'd like to list is what makes this software unique, anything special about it. Perhaps its most outstanding features, that sort of thing.

Where and How to obtain it.
If the software is freely distributable then ftp details would be great. If it is commercial software then the name of the company distributing the software, and an address or telephone number. If it is available only by some other means, say mail order, then details on where and how to obtain it.

Licensing/Copyright
Is the software Copyleft? Copyright? Shareware? Public Domain? Restricted in use in any way?

Don't worry if you don't know all of these details, just send me what you do know and I'll list what I can. I'd rather have an incomplete listing than no listing at all.

Please mail any contributions to:

<terry@perf.no.itg.telecom.com.au>

I'd list a packet radio address too but I'm still not properly operational again yet after moving house.

15. Discussion relating to Amateur Radio and Linux.

There are various places that discussion relating to Amateur Radio and Linux take place. They take place in the comp.os.linux.* newsgroups, they also take place on the HAMS list on vger.rutgers.edu. Other places where they are held include the tcp-group mailing list at ucsd.edu (the home of amateur radio tcp/ip discussions), and you might also try the #linpeople channel on the undernet irc network.

To join the Linux linux-hams channel on the mail list server, send mail to:

Majordomo@vger.rutgers.edu

with the line:

subscribe linux-hams

in the message body. The subject line is ignored.

To join the tcp-group send mail to:

listserver@ucsd.edu

with the line:

subscribe tcp-group

in the body of the text.

Note: Please remember that the tcp-group is primarily for discussion of the use of advanced protocols, of which tcp/ip is one, in Amateur Radio. Linux specific questions should not ordinarily go there.

16. Copyright.

- --- BEGIN Linux HAM HOWTO part 1/2 ---

Linux HAM-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v2.0, 30 April 1996

It is hoped that this document will assist Amateur Radio operators in
finding and trying the various amateur radio software that has been
written for or ported to Linux. It is also hoped that as a consequence
of this information being available that more amateur radio operators
will choose Linux as the platform of choice for their experimentation,
and that software developers will choose Linux as the platform for
their software development, further expanding the role of operating
systems like Linux in the Amateur Radio field.

1. Introduction.

This list was prompted by comments that had been expressed in the
various Linux newsgroups about the number of amateur radio operators
that were involved with Linux. It is now clear that Linux is becoming
a popular platform for Amateur Radio development work.

This list was originally called the RADIOLINUX list, but has been
moved into the Linux Documentation Project HOWTO collection, so it has
been renamed the HAM-HOWTO. I make no apologies for the name.

1.1. Changes from the previous version

Additions:
ObjectProDSP
LBBS - maybe.
Mike Westfall's ttylinkd
Craig Small's ttylinkd
predict, uo11, dove, kepgen - thanks John!
Corrections/Updates:
Copyright changed to GNU GPL version 2.0
```

Removed the Hints/Tricks section and made it the AX25-HOWTO
Removed the SCC, PI, PacketTwin and moved them to AX25-HOWTO
Updated svgaftt - thanks Andrew!
A small fixlet for TNOS on ftp.ucsd.edu
Updated chipmunk home site - thanks John!
Updated TNT to DPTNT

2. Where to obtain new versions of this document.

The Linux Documentation Project runs a Web Server and this document appears there as The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>.

Dennis Boylan N4ZMZ <dennis@nanovx.atl.ga.us> makes it available at the following three locations:

www.com <http://www.com/linux/radio/index.html>, www.hboc.com <http://www.hboc.com/linux/index.html> and www.lan.com <http://www.lan.com/linux/index.html>.

John Gotts N8QDW <jgotts@engin.umich.edu> makes it available at: www.engin.umich.edu <http://www-personal.engin.umich.edu/~jgotts/linuxhamsoft.html>.

Dan Todd <dantodd@fusilli.ucdavis.edu> makes it available at the following two locations: wheel.dcn.davis.ca <http://wheel.dcn.davis.ca/~dantodd/Linux/HAM-HOWTO.html>, and fusilli.ucdavis.edu <http://fusilli.ucdavis.edu/Linux/HAM-HOWTO.html>.

Alan Hargreaves VK2KVF <alan@dap.CSIRO.AU> makes it available in Australia at: www.dap.csiro.au <http://www.dap.csiro.au/RadioLinux>.

The Tuebingen Radio Club has it available from their home page at: DARC Home Page <http://www.neckar-alb.de/darc/welcome.html>

Please let me know if you'd like to make it available somewhere too. I'd like to see it on some Web Servers that are accessible from radio.

3. Satellite Software.

The following software is for use in experimentation with Satellite communication.

3.1. MicroSat Ground Station Software

Author
John Melton, G0ORX/N6LYT, g0orx@amsat.org and Jonathan Naylor G4KLX, g4klx@amsat.org

Description
Microsat Ground Station software.

Status
BETA. Version 0.9-Xaw released.

System requirements
Alan Cox's kernel based AX.25 support ver 1.1.12 or better. X-Windows. The programs make use of the Athena Widgets and look much better with the 3D libraries.

Detail
This software allows you to use of a KISS tnc to directly communicate with the Microsat series of satellites. It provides an Athena Widgets based X-Windows interface, and allows you a comprehensive range of means of interacting with the satellite. The software should work with any window manager.

The software provides the following programs:

xpb:
broadcast monitor

xpg:
ftl0 file upload program, message upload program

xtlm:
telemetry display program

downloaded:
downloaded file list viewer

directory:
directory list viewer

message:
message preparation application

viewtext:
uncompressed ASCII text file viewer

viewlog:
display the contents of some log files

xweber:
special program for downloading webersat images

phs:
general purpose PACSAT header stripper

Where and How to obtain it.
John's software is available from: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/microsat-0.9-Xaw.tar.gz>
or ftp.funet.fi
<ftp://ftp.funet.fi/pub/ham/satellite/pacsat/microsat-0.9-Xaw.tar.gz>.
Please check for new versions.

Licensing/Copyright
GNU Public License. Freely redistributable, No warranty.

G4KLX

3.2. SatTrack - Satellite tracking program

Name
SatTrack

Author
Manfred Bester, DL5KR, manfred@ssl.berkeley.edu, (510) 849-9922

Description
Satellite realtime tracking and orbit prediction program with
X11 color graphics.

Status
Version 3.1 has been released.

System requirements
A vt100 terminal and or X11 server. A Maths Coprocessor is
useful, but not essential, for good performance.

Detail
SatTrack is a satellite tracking program that has been written
in 'C' language on a UNIX workstation. It provides two different
live displays, for single or multiple satellites, and two
different orbit prediction facilities. Cursor controls used in
both live displays are compatible with the VT100 standard, which
allows the program to be run basically from any terminal. An
optional X Window graphics display shows the typical world map
tracking chart. The orbit prediction can be run either
interactively or in a batch mode. In the latter case all
necessary parameters are specified on the command line. The
program uses the NORAD/NASA two-line Keplerian element (TLE)
sets directly.

The current version of SatTrack can track a single satellite
and/or display multiple satellites for a single ground station.
It also can control suitable ground station hardware, like
antennas and radio equipment, and has an autotrack mode in which
it switches automatically between a number of specified
satellites. For calibration purposes tracking of the Sun and the
Moon are also provided. Future releases will provide more
options. SatTrack requires about 5 MB of disk space in the full
distribution with eight different world maps (2 styles, with 4
different sizes each, to fit everyone's screen and taste) and
less than 1.5 MB of memory at run time. More information can be
obtained from the SatTrack WWW Home Page
<http://www.primenet.com/~bester/sattrack.html>

Compiling the software under Linux is quite straightforward.
Manfred has designed the Makefile to compile the software
directly under your home directory, this is easy to change.

The steps I took were:

```
# cd /usr/src
# export HOME=/usr/src
# gzip -dc sattrack-3.1.1.tar.gz | tar xvf -
# cd SatTrack/src
# vi Makefile
{Comment SUN4 compile options}
{Uncomment the linux options}
{Select the options you want}
# make
```

Where and How to obtain it.
SatTrack can be found at: ftp.amsat.org
<ftp://ftp.amsat.org/amsat/software/Linux/sattrack-3.1.1.tar.gz>
or ftp.jvnc.net
<ftp://ftp.jvnc.net/priv/kupiec/sattrack/sattrack-3.1.1.tar.gz>
or the SatTrack WWW Home Page
<http://ssl.berkeley.edu/isi_www/sattrack-3.1.1.tar.gz>

Licensing/Copyright
The software is Copyright of Manfred Bester. It can be used without special permission for non-profit, non-commercial use. For commercial applications a license from the author is required.

Contributed by:
Manfred Bester, DL5KR

3.3. Predict

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A satellite orbital prediction program that also tracks the sun's position to predict visible satellite passes.

Status
Complete and working.

System requirements
predict is a screen-oriented program that utilizes the ncurses-1.8.5 (or later) library. A color terminal is a plus, but not a necessity.

Detail
Features of predict include azimuth and elevation headings of satellite passes, orbital phase, sub-satellite point locations, slant ranges, orbit numbers, and sunlight visibility as a function of date and time. The program is simple, fast, and easy to use. Predict maintains an orbital database for 21 satellites that can be updated by the user through the keyboard or by using files containing NASA 2-line orbital element data. Since this

program operates under a multiuser environment, each user on the system owns and maintains his or her own unique orbital data base.

This program has been compiled using the highest level of compiler optimization for high speed execution, and uses an a.out binary format for greatest compatibility.

To install the package use the following:

```
# cd /
# tar xvfz predict.tgz
```

Where and How to obtain it.
You can obtain predict from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>

Licensing/Copyright
This software is available free of charge and must be used for non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.4. UO11

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple UoSAT-OSCAR-11 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A 1200 baud UoSAT-OSCAR-11 FSK demodulator (Bell-202 is suitable), a VHF-FM receiver that can tune to 145.825 MHz, a small yagi antenna, and a communications program such as Minicom that can save 1200 baud ASCII telemetry data to a text file.

Detail
uo11 decodes ASCII telemetry data that has been captured through a terminal program, error checks the received data, and applies calibration equations to the received data to produce a report that can be easily understood and analyzed. uo11 comes pre-compiled (a.out format) with a man page entry for ease of use.

To install you should use the following commands:

```
# cd /
# tar xvfz uo11.tgz
```

Where and How to obtain it.
You can obtain uo11 from: pilot.njin.net

<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.5. Dove

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple DOVE-OSCAR-17 satellite telemetry decoding program.

Status
Complete and working.

System requirements
A terminal node controller (TNC), a VHF-FM receiver that can
tune to 145.825 MHz, a small yagi antenna, and a communications
program such as Minicom that can save 1200 baud ASCII telemetry
data to a text file.

Detail
dove decodes ASCII telemetry data that has been captured through
a terminal program and applies calibration equations to the
received data to produce a report that can be easily understood
and analyzed. dove comes pre-compiled (a.out format) with a man
page entry for ease of use.

To install Dove you should use the following commands:

cd /
tar xvfz dove.tgz

Where and How to obtain it.
You can obtain Dove from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

3.6. Kepgen

Author
John A. Magliacane, KD2BD, <kd2bd@amsat.org>

Description
A simple, yet useful utility that generates Keplerian data files
in the NASA 2-line format from data entered through the
keyboard.

Status
Complete.

System requirements
kepgen is a screen-oriented program that utilizes the
ncurses-1.8.5 (or later) library. A color terminal is a plus,
but not a necessity.

Detail
kepgen allows the user to create checksummed Keplerian data
files in the NASA 2-line format using orbital data entered via
the keyboard. kepgen was created out of the need for generating
2-line orbital files from orbital data copied from WA3NAN audio
transmissions during Space Shuttle missions. The files created
can be read by virtually any satellite tracking or orbital
prediction program. kepgen comes pre-compiled (a.out format)
with a man page entry for ease of use.

To install kepgen you should use the following commands:

cd /
tar xvfz kepgen.tgz

Where and How to obtain it.
You can obtain kepgen from: pilot.njin.net
<ftp://pilot.njin.net/pub/SpaceNews/linux>.

Licensing/Copyright
This software is available free of charge and must be used for
non-commercial purposes only.

Contributed by
John A. Magliacane, KD2BD

4. Shack Automation Software.

Software for simplifying tasks in the shack. Examples might include
software for controlling the newer breed of radios, logging programs,
QSL database, or antenna rotation.

4.1. FT-890 remote control

Author
Emarit Ranu, drranu@holly.ColoState.EDU, KG0CQ.

Description
A simple program to control a Yaesu FT-890 transciever via its
CAT port from linux.
Status
Working

System requirements
Yaesu FT-890, Yaesu FIF-232C interface converter or homebuilt equivalent (Feb 1993 "QST", page 37). Linux, serial cable.

Detail
The program is started with one parameter specifying the com port to use. Once started the program is menu driven. Future versions will support an X-Windows interface.

Where and How to obtain it.
The software is currently only available from the author by email.

Licensing/Copyright
You may copy this program millions of times, the only restrictions are:

- You may not charge ANYONE for the program itself.
- You may not distribute modified versions of the program.
- If you distribute the program, it MUST be the ORIGINAL tar file as received by the author. The README file has to be included.

Contributed by:
Emarit Ranu, drranu@holly.ColoState.EDU

5. Packet Radio

Software for use in conjunction with, or for facilitating packet radio.

5.1. JNOS

Author
Brandon Allbery, KF8NH, bsa@kf8nh.wariat.org

Description
Brandon ported JNOS to Linux. His port is currently of the 1.09 (aka 1.08df) release of JNOS. Future versions will probably be based on Doug Crompton's evolution of 1.08df. Brandon suggests that JNOS for Linux is primarily of interest to people with existing DOS-based NOS configurations (especially server/switch configurations) who wish to switch to Linux or to escape the 640K barrier.

Status
Brandons code was rolled back into the main jnos distribution, so development on the two runs in parallel.

System Requirements.
Any version of Linux along with ncurses 1.8.1 or 1.8.5 (the latter is preferred). Optionally you will require Linux networking (at least loopback and slip).

Detail
If you include the Linux networking code in addition to JNOS, you can link the two by a slip link running over a pty, so that Linux can provide services to your radio users. In this way you can easily add servers without having to build them into JNOS itself.

Where and How to obtain it.
You can obtain JNOS for Linux ALPHA.4 at: ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/jnos/jnos110i.zip> ncurses is available on most Linux ftp sites.

Licensing/Copyright
Brandon's modifications to JNOS are public domain. Most of the pre-existing NOS code is copyrighted and restricted to non-commercial use by the various contributors from Phil Karn on.

Contributed by:
Brandon Allbery, KF8NH

5.2. TNOS

Author
Brian A. Lantz, brian@lantz.com

Description
TNOS is a NOS derivative that is being actively supported and which is available for both DOS and Linux. It features enhancements not found in other NOS versions.

Status
The current version is 2.0 and is stable.

System Requirements
Kernel networking slip support if you want to link the normal Linux network facilities with TNOS. A kiss tnc.

Detail
Brian maintains a World Wide Web server which contains up to date information on TNOS, you can find it at www.lantz.com <http://www.lantz.com/tnos/tnos.html>.

Where and how to obtain it
The current version of TNOS is always available from: ftp.lantz.com <ftp://ftp.lantz.com/tnos/current/linux/>, sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/tnos/>.

Licensing/Copyright etc.
Free for use by amateur radio operators and educational oraganisations

5.3. N0ARY Packet BBS for UN*X

Author
Bob Arasmith, N0ARY, ported to Linux (and others) by Bob Proulx, KF0UW, rwp@fc.hp.com

Description
A packet bbs implemented under UN*X.

Status
ALPHA. Bob is running version ARY-0.9 on both Linux and HP-UX. The next version from N0ARY which is called 4.0 is in alpha test/development release. Bob has not been able to bring this online yet and is still running 0.9+kf0uw mods. Bob has about half it working with Alan Cox's AX.25 kernel which would be the desirable combination.

System Requirements.
Linux installation, C Compiler, plus HAM radio TNC hardware.

Detail
This bbs has an excellent packet user interface. It has a compatible set of commands with the RLI bbs so users will be familiar with it immediately. It then extends the command set to be a very nice natural language style interface (e.g "list at allus about KPC-3"). Many csh style bang commands are supported. Also included is a mail interface to provide a packet to internet gateway.

Currently you need to customize the source code for your installation so you need some C programming proficiency.

Where and How to obtain it.
For a Linux version or for Linux information send mail to rwp@fc.hp.com. For a SunOS version contact bob@arasmith.com. This code is not packaged for distribution yet since it is not past the alpha stage of development.

Licensing/Copyright
Copyright by Bob Arasmith, N0ARY, but freely redistributable.

Contributed by:
Bob Proulx, kf0uw, rwp@fc.hp.com

5.4. LBBS - Linux BBS message gateway

Author
Daryl L Miles, G7LED, dlm@frink.demon.co.uk

Description
A BBS package designed to operate with either the native AX.25 kernel code or with the Wampes package.

Status
In development, working.

System requirements
Kernel AX.25 support or the Wampes package. sendmail, CNEWS.

Detail
Daryl's aim was to build a platform on which amateurs could build a Packet BBS to smtp gateway for Linux. I'm not sure what the current status is as the last version I could find was dated 30 Jun 1995. The latest binary version supports:

- MBL, FBB batching, FBB compressed, FBB type 1 compressed forwarding with restart facility implemented, deferring, and rejection.

- various Linux transport mechanisms including TCP kernel, AX.25 kernel, Wampes NetROM, AX25 or TCP.

- Simple dialer, to allow connections through AX.25 or NetROM nodes.

- White Pages

- Transient handling of type A (ACK messages).

- SMTP/NNTP<>BBS gatewaying implemented heavily to the extent that the user front end will be accessing the NetNews spool to retrieve articles.

- Message filter mechanism

- Field swapping (like SWAPP.SYS in FBB).

- Multiuser/connect.

To install, I did the following:

```
# cd /usr/src
# mkdir LBBS
# tar xvfz LBBS-0.1.6A.tar.gz
# cd LBBS
# ./Install.sh
```

This created a /usr/lbbs directory. The README.Setup file suggest an order in which to configure the BBS.

Where and How to obtain it.
You can obtain LBBS from: G7PIT's ftp site <ftp://rsl_pc3.ion.le.ac.uk/pub/LBBS>, or ftp.ucsd.edu <ftp://ftp.ucsd.edu/hamradio/packet/tcpip/linux/>.

Licensing/Copyright
Freely distributable for any non-commercial Amateur Radio use only. No warranty. Will be changed to GPL when software is stable.

5.5. MBL/RLI message to NNTP and email converter.

Author
SM0OHI, pme@it.kth.se

Description
Software that will convert incoming MBL/RLI messages into either NNTP or RFC-822 formatted mail messages.

Status
Development, not yet released.

System requirements
Unknown.

Detail
This software would be ideally suited to those who want to establish a mail and news gateway between conventional tcp/ip networks and the amateur radio mail network.

Where and How to obtain it.
Not yet availale.

Licensing/Copyright
Unknown.

Contributed by:
SM0OHI

5.6. Packet Cluster Node software

Author
Franta Bendl, DJ0ZY, and Bernhard ("Ben") Buettner, DL6RAI, root@dl6rai.muc.de

Description
A PacketCluster like system running on Linux.

Status
Released in October 1995.

System Requirements
Linux Kernel version 1.2.0 or greater with Alan Cox's AX.25 version 025 driver, TCP/IP networking, SysV IPC. Also needs Perl and KISS TNC hardware on serial device.

Detail
PacketCluster nodes have been available for about six years. The original software was written by Dick Newell, AK1A, and is running under DOS. clx is a system which clones a PacketCluster node. To the outside user commands and features are mostly identical, remote PacketCluster nodes, which can be networked, don't see the difference between a generic PacketCluster node and clx. So it fits well into an established network of PacketCluster nodes.

clx is not a user application, it is network node software. As such it is not of much use for the individual amateur. SysOPs of

PacketCluster nodes with some experience on both PacketCluster
and Linux will find this application interesting.

Here are some of the features of CLX:

• It is fully compatible with the internal PCxx protocol and from
a users' point of view. It allows multitasking and different
priorities for different things.

• The software detects looping DX spots without generating endless
messages. clx filters out such duplicate information. We have
implemented a concept which allows us to connect the network at
multiple points, which would formerly have been called a
"Cluster Loop". clx knows of so-called "active" and "passive"
links. The outcome is that more DX information is seen by clx.

• An interface to call your external programs (even dialog
programs).

• clx uses modern programming concepts like shared memory for
common data, lex & yacc to implement command language, shared
libraries to keep binaries small (this is still on our wish
list), remote procedure calls for inter process communication.
It is strictly modularized with its own dedicated process for
every major task.

• Comprises the following modules:

con_ctl
interfaces AX.25 kernel code and provides a socket for local
users.

rcv_ctl
manages receive spooling.

snd_ctl
manages transmit spooling.

rm_disp
receive message dispatcher, forwards messages to other
processes.

usr_req
user database requests, forks a process for every database
task to make it run in the background. The background process
later sends the results directly to send_ctl.

mb_ctl
mailbox control. The mailbox keeps messages in a file system,
header information is stored in the database.

usr_ctl
user administration (logins, logouts, logbook).

usc_mng
manages external user commands and command extensions.

iu_com
inter user communication (talk, conference).

send_ctl
transmit spooling, handling priorities.

icl_com
inter node communication (processing and generating PCxx
messages).

clx_ctl
system administration, installing shared memory pages.

int_com
manages internal program communications.

- The following is the only application program which can be run on the console:

loc_usr
allows console operator(s) to log in like a normal user.

Future enhance planned are:

- A console monitor to watch ongoing activities
- Speed optimization
- An internal clx protocol
- An additional command shell for experienced users

Where and How to obtain it:
ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/Linux/cluster>

There are five files that make up the package:

- 00Index
- clx_200.tgz
- install.clx
- README

Licensing/Copyright
clx (c) by Franta Bendl (DJ0ZY) and is available for non-
commercial use, but the authors want to keep track of who is
using their product, so before you can actually use the software
you have to ask for an encrypted callsign string to be placed in
the configuration file. You must send mail to
<clx_us@dl6rai.muc.de> to organise this.

Contributed by:
Bernhard ("Ben") Buettner, DL6RAI

5.7. Single floppy disk AX.25 router.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A single floppy disk version of linux with enough software to
allow a PC to act as an AX.25/IP router.

Status
Development, not yet released.

System requirements.
As for any Linux system a 386SX class PC or better.

Detail
No detail yet.

Where and How to obtain it.
Not yet available.

Licensing/Copyright
Unknown/Undecided.

5.8. DPTNT Terminal and BBS package.

Author
Mark Wahl, DL4YBG, DL4YBG@DB0BLO.#.DEU.EU, wahlm@zelator.de

Description
A suite of programs that provide BBS and Terminal programs for
Linux.

Status
Stable and working.

System requirements
TNC supporting WA8DED hostmode or KISS protocols.

Detail
TNT is a full featured hostmode terminal program. Compiling it
on Linux is as difficult as untarring the source and typing
`make'. It provides both a `dumb' terminal and X11 version. It
comes with some comprehensive documentation which describes its
features in some detail. Its main features are:

Multiple sessions:
TNT supports multiple packet radio connections on virtual
screens that you can switch between. Each session window
provides split screen (seperate transmit and receive text)
operation with a status line. Commands can be entered in
either a command session, or in any terminal session using a
command key. Each of the virtual screens can be larger than

the physical screen and can be scrolled around.

Data capture, file transfer and logging:
A number of options are available for logging received text to files. You can log transmit, receive or both to a log file. You can overwrite or append received data to existing files. You can use the `autobin' protocol to transmit or receive binary files.

Remote Shell operation:
You can provide a shell to remote users so that they can access other programs on your computer. You can also run a program and direct its input/output to a channel so that users can use it.

Redirection of devices to a channel:
TNT allows you to redirect input/output from a channel to a device, a modem for example.

Umlaut conversion:
TNT provides umlaut conversion if necessary.

Remote mode:
Remote users can issue command themselves if allowed to do so.

Socket mode:
You can configure tnt so that it opens a socket for users to telnet to that allows them operation just as you have from the console. This is useful where your linux machine is on an ethernet and you want other terminal on the net to have use of your radio.

DPBOX is a full featured BBS supporting the following features:

- F6FBB, W0RLI, TheBox style forwarding protocols.
- 8-bit transparent handling of messages using AutoBIN protocol.
- BBS data compressed to save space on disk, forwarding and downloading.
- "Live message capture" off BBS frequency, saves network traffic.
- PACSAT style bulletin broadcast transmitter and receiver.
- up to 200 simultaneous users.

Where and How to obtain it.
TNT by itself is available by anonymous ftp from: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/tntsrc09.tgz>. The DPTNT package may be found at: ftp.funet.fi <ftp://ftp.funet.fi/pub/ham/unix/packet/dptnt/>, or ftp.tapr.org <ftp://ftp.tapr.org/pub/tapr/software_lib/Linux/>, or

ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/>.

The Home Pages of the developers are at: DL4YBG
<http://www.snafu.de/~wahlm/> and DL8HBS <http://hppool0.rz.hu-berlin.de/~h0187akk/>
Licensing/Copyright
The TNT and DPBOXT programs are covered by the GNU Public License. The TFKISS program is covered by ALAS (a german license for Amateur Radio use), and the DPBOX program is freely distributable for Amateur Radio use.

5.9. IPIP encapsulation daemon.

Name
Mike Westerhof's IPIP encapsulation daemon.

Author
Mike Westerhof KA9WSB (original code), then Bdale Garbee N3EUA (port to BSD), then Ron Atkinson N8FOW and John Paul Morrison (port to Linux), then Bdale rolled it all back together again.

Description
A daemon that will allow you to use your linux machine as an IPIP encapsulating gateway.

Status
Ron is running this code himself, and the other version have been run quite successfully.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
If you've ever used an internet gateway from your amateur packet radio you have probably been connected by an encapsulation gateway of some descpription. Most run KA9Q's NOS and DOS, but others run Unix and this daemon. It allows you to encapsulate IP within IP, so that you can 'tunnel' IP connections over the Internet. The software allows you to connect a KISS TNC to your linux machine and to have all datagrams received on it carried across the Internet to a similar gateway. Bdale has installation instructions in the package.

Where and How to obtain it.
This software is available from the col.hp.com
<ftp:///col.hp.com/hamradio/packet/etc/ipip/ipip.tar.gz> ftp site.

Licensing/Copyright etc.
Freely distributable, though Bdale asks that if you use the code and like it you might send him a QSL card or a postcard.

Contributed by:
Ron Atkinson, N8FOW, and Bdale Garbee, N3EUA

5.10. AXIP encapsulation daemon.

Name
Mike Westerhof's AXIP encapsulation daemon.

Author
Mike Westerhof KA9WSB, ported to Linux by Ron Atkinson N8FOW.

Description
A daemon that will allow you to use your linux machine as an
AXIP encapsul ating gateway.
Status
Not properly tested, but assumed to work ok.

System requirements
KISS TNC, any version of Linux supporting RAW sockets.

Detail
This daemon is the partner to the IPIP encapsulation daemon. It
allows you to encapsulate AX.25 frames in IP to carry them
across the Internet. This is useful for linking AX.25 networks
in remote areas. Ron has supplied a Makefile for linux, and with
it the software compiled without errors on my system running a
recent version kernel. Ron has also written some README files
which give you the detail necessary to compile the system and
the original documentation describes how to configure it.

Where and How to obtain it.
This software is available in the sunsite.unc.edu ham apps
directory
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ax25ip.tar.gz>.

Licensing/Copyright etc.
Freely distributable so long as the original copyright notice is
not removed.

Contributed by:
Ron Atkinson, N8FOW

5.11. Ping-Pong Convers Server

Name
Fred Baumgartens Convers Server for Linux.

Author
Fred Baumgarten, DC6IQ, <dc6iq@insu1.etec.uni-karlsruhe.de>

Description
This is a version of the convers server that allows multiple
users to simultaneously chat with each other in a round-table
style conversation. It is compatible with the NOS convers
servers, but provides extra facilities such as saving/restoring

of Personal Text and Chanel Topics.

Status
In use of a number of popular convers servers, appears very
stable.

System requirements.
Linux, GNU make, C compiler.

Detail.
Complete installation instructions are included in the INSTALL
file that is included in the distribution.

Where and How to obtain it.
A distribution of this software is available at sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/convers/>. The home of
the software is at insu1.etec.uni-karlsruhe.de ftp server
<ftp://insu1.etec.uni-karlsruhe.de/pub/hamradio/convers/convers>

Licensing/Copyright etc.
Presumably copyright Fred Baumgarten (not specifically stated),
but some portions appear to be free for non-commercial use and
copying provided the copyright notices stay intact.
5.12. RSPF Daemon

Name
RSPF - Radio Shortest Path First routing daemon for Linux

Author
Craig Small vk2xlz <csmall@triode.apana.org.au>

Description
An implementation of the Radio Shortest path First routing
protocol for linux. The daemon supports version 2.2 of the
protocol which corrects a lot of bugs and problems that were
present in version 2.1.

Status
Alpha - running, needs testing and bug reports. Current version
is 0.05

System requirements.
Requires Alan Cox's kernel based AX.25 code.

Detail
This program will allow Linux to become an RSPF router. It
addresses some of the quirks of RSPF v2.1, the version in NOS
which means that it is incompatible with the NOS version. It
will also allows remote/local queries via a tcp session for
debugging and diagnostic purposes.

Where and How to obtain it.
Current versions are always available from sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or ftp.ucsd.edu

<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming> or from the
author.

Licensing/Copyright
GNU Public License vers 2.0

Contributed by:

5.13. Michael Westfall's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Michael Westfall, N6KUY, <mwestfal@.csci.csusb.edu>

Description
A split screen terminal program that listens on the ttylink port
and accepts incoming connection requests.

Status
Seems to work fine.

System requirements
none special.

Detail
This is a standalone program that does require you to change the
configuration of your system at all. If you have root access on
your machine then you run the program in a VT or in an XTerm and
it will clear the screen and wait for an incoming connection on
port 87 (ttylink). When a connection is received it will provide
you with a split screen display with which to communicate with
the calling person.

Where and How to obtain it.
You can obtain ttylinkd from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/ham/ttylinkd.tgz> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming/ttylinkd.tgz>.

Licensing/Copyright
Unknown, presumed freely distributable.

5.14. Craig Small's TTYLINK Daemon

Name
ttylinkd - a ttylink daemon for Linux.

Author
Craig Small, VK2XLZ, <csmall@triode.apana.org.au>

Description
A daemon to accept a ttylink (port 87) tcp/ip connection and

convert it into a talk request for a user on the host machine.
This may also be configured for use with the ax25d program so
that AX.25 users may also make use of it to connect to you.

Status
Alpha, but working.

System requirements.
Kernel networking support with AX.25 support if desired.

Detail
Because the talk protocol is a non-standard, that is it isn't
actually defined anywhere (except the source), the ttylink
protocol from NOS has become the defacto standard, at least for
amateurs, to provide keyboard to keyboard communication over
tcp/ip. This daemon fills the need for something to answer
ttylink requests to linux machines.

To build and install the software, I did:

cd /usr/src
tar xvfz ttylinkd-0.02.tar.gz
cd ttylinkd-0.02
<edited the Makefile to change the SYSOP_USER>
make
cp ttylink /usr/sbin
<edited /etc/service, /etc/inetd.conf as instructed in README>
killall -1 inetd

Where and How to obtain it.
You can obtain the latest version of ttylinkd from:
sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/> or
ftp.ucsd.edu
<ftp://ftp.ucsd.edu/hamradio/packet/tcpip/incoming>.

Licensing/Copyright

6. Morse Code

Software for use in conjunction with, or for facilitating Morse
communication.

6.1. GW4PTS Morse trainer.

Author
Alan Cox, GW4PTS, iialan@iifeak.swan.ac.uk

Description
A Morse Code trainer that uses the PC internal speaker

Status
stable, works quite well, unfinished.

System requirements
Linux, any version

Detail
Alan wrote this small program in only an hour. It is quite neat, and allows you to play morse at a range of speeds and frequencies through the PC internal speaker. You can specify the text to be played either from the command line, from a file, or the program is capable of generating random character groups. As it stands you must invoke the program from a Linux Virtual Console, as it relies on certain kernel calls to produce the sound, and these don't work as easily from an XTerm. As it sounds each character it lists the character in verbal form (Di, Dit, Dah etc.) to the screen. Alan is hoping that someone will take the code and enhance it with the features he has listed in the comments at the head of the source file.

Where and How to obtain it.
I've had a large number of responses from people seeking this code, so I've obtained Alan's permission to make it available. You can obtain it from sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/ham/GW4PTS.morse.tar.gz>.

Copyright/Licensing
GNU Public License 2, freely redistributable, no warranty.

6.2. morse (aka superiormorse)

Author
Joe Dellinger, Hawaii Institute of Geophysics, University of Hawaii at Manoa, joe@sep.stanford.edu, jdellinger@trc.amoco.com, joe@soest.hawaii.edu

Description
A morse-code practice program for UNIX workstations.

Status
Quite stable

System Requirements
Currently supports X11, Sun4, HP, Indigo, and Linux

Detail
Lots of features and options. Includes a utility for generating random content QSOs, similar to those used in the FCC exams.

Where and How to obtain it:
morse can be obtained from: sepftp.standford.edu <ftp://sepftp.stanford.edu/pub/UNIX_utils/morse/morse.tar.gz>.

Licensing/Copyright
Freely Redistributable

Contributed by:
Brian Suggs, AC6GV, and John Gotts, jgotts@engin.umich.edu

7. AMTOR Software.

Software for use in conjunction with, or for facilitating AMTOR.

8. PACTOR Software.

Software for use in conjunction with, or for facilitating PACTOR.

9. Slow Scan Television Software.

Software for use in conjunction with, or for facilitating Slow Scan Television.

10. Facsimile Software.

Software for use in conjunction with, or for facilitating Facsimile.

11. Design and Construction Software.

Software to assist in the design and construction of amateur radio related things. Antenna, Circuit Board, Filter, and QSL card design packages are all good candidates for this section.

11.1. Software Oscilloscope

Author
Jeff Tranter, Jeff_Tranter@Mitel.COM

Description
Scope is a simple software emulation of an oscilloscope. It graphically displays voltage as a function of time.

Status
ALPHA. First release.

System requirements
Sound card with input capability supported by the kernel sound driver. SVGALIB is used to do the display work.

Detail
Scope uses the /dev/dsp device to take audio in from the soundcard and displays it on the screen in a manner similar to an oscilloscope. Jeff claims Scope was written more for amusement value than for any serious purpose.

Where and How to obtain it.
You can obtain source, makefile and man page for Scope from:
sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/scope-0.1.tar.gz>

Licensing/Copyright
GNU Public License, Freely redistributable, No warranty.

11.2. Printed Circuit Board design tool.

Author
Thomas Nau, <Thomas.Nau@rz.uni-ulm.de>

Description
An X11 based interactive printed circuit board design tool.

Status
Vers 1.3, stable.

System requirements
X11 Windowing system and a recent flex program.

Detail
The pcb package comes with good instructions on how to compile and install the software. I compiled it without error under X11R6. It comes with package layouts for a range of popular components and the example layout nicely demonstrates the capabilities of the package.

Where and How to obtain it.
You can obtain the pcb package from: sunsite.unc.edu <ftp://sunsite.unc.edu/pub/Linux/apps/circuits/pcb-1.3.tar.gz> or from: ftp.medizin.uni-ulm.de <ftp://ftp.medizin.uni-ulm.de/pub/pcb-1.3/pcb-1.3.tar.gz>

Licensing/Copyright
GNU Public License

11.3. Chipmunk circuit design and simulation tool

Author
Dave Gillespie <daveg@synaptics.com> and John Lazzaro <lazzaro@cs.berkeley.edu>

Description
Schematic Entry and Digital or Analog Simulation.

Status
vers 5.10, stable.

System requirements
X11 windowing system and older (XFree86-2.x) libs, 8 bpp (256 color) only

Detail
I haven't tried this one out yet.

Where and How to obtain it.
You can obtain the Chipmunk package from its home site at www.pcmp.caltech.edu <http://www.pcmp.caltech.edu/chipmunk/>.

Licensing/Copyright
Modified GNU Public License, Caltech specifically disclaimed from liability.

11.4. irsim

Author
Dmitry Teytelman, dim@leland.stanford.edu

Description
An event-driven logic-level simulator for MOS circuits

Status
Version 9.2, production.

System Requirements
X-Windows.

Detail
irsim is an X11 based simulator for MOS circuits. It has two
simulation modes, either switch where each transistor is
modelled as a voltage controlled switch, or linear where each
transistor is modelled as a resistor in series with a voltage
controlled switch, and each node has a capacitance.

Where and How to obtain it.
You can obtain irsim from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/irsim-9.2.linux.1.tar.gz>.

Licensing/Copyright
Freely Redistributable

11.5. Spice vers. 3f4

Author
University of California, Berkeley, port by
Jeff@RyeHam.EE.Ryerson.Ca

Description
Spice is an analog circuit emulator.

Status
Stable release.

System requirements
Unknown.

Detail
Spice allows you to design and test circuits in a computer
modelled environment to see how they will behave without having
to touch a soldering iron, or solder. A readme file comes with
the package. To install I did the following:

```
# cd /usr/src
# gzip -dc spice3f4.tar.gz | tar xvf -
# cd spice3f4
# ./utils/build linux
# ./utils/build linux install
```

Where and How to obtain it.
You can obtain version 3f4 of Spice from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/circuits/spice3f4.tar.gz>
Licensing/Copyright
Copyright held by University California, Berkeley. Freely

redistributable provided you are not unfriendly to the U.S.

11.6. svgafft - Spectrum analyser

Author
Andrew Veliath, veliaa@rpi.edu

Description
svgafft is a spectrum analyser for Linux.

Status
Alpha, but usable.

System requirements
F77, Linux supported sound card, svgalib, a 486DX33 or better.

Detail
svgafft uses the /dev/dsp device and currently supports 16-bit
and 8-bit sample resolution on supported Linux soundcards. It's
display is something akin to a high-end spectrum analyzer with
falling peaks. Andrew is working on an X-Motif version to be
released soon.

Where and How to obtain it:
You can find the software at tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/ALPHA/svgafft/svgafft-0.2h.tar.gz>
and sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freqs/svgafft-0.2h.tar.gz>.

Licensing/Copyright
GNU Public License.

Contributed by:
Andrew Veliath, veliaa@rpi.edu

11.7. Audio Spectrum Analyser

Author
Philip VanBaren, phillipv@eecs.umich.edu

Description
An audio spectrum analyser for Linux SVGALIB or X-Windows.

Status
Alpha but usable

System requirements
Linux supported sound card, svgalib or X-Windows.

Detail
freq5a1 uses the /dev/dsp device, samples the incoming audio,
performs a fast fourier transform on the data and displays the
output in either 640x480 VGA or an X-Window.

Where and How to obtain it:
You can obtain freq5a1.tar.gz from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/apps/sound/freq5a1.tar.gz> or
by mail from the author.

Licensing/Copyright
GNU Public License vers 2.0.

11.8. ObjectProDSP

Author
Paul Budnik, Mountain Math Software, support@mtnmath.com

Description
ObjectProDSP is an object oriented tool for design, development
and implementation of Digital Signal Processing. It allows you
to design your DSP network, runs simulations with oscilloscope
style plots and listings at any point in the network.

Status
alpha.

System requirements
XFree86 3.1.1 or better, g++ from gcc 2.6.3 or better, 32Mb of
total memory (real+swap) recommended, 6Mb of disk space for
minimum configuration, 40Mb disk for full installation.

Detail
There are a number of files that comprise the package. There is
a binary only package for Linux which I recommend you start
with. There is comprehensive documentation included from which
you can obtain installation and operation instructions.

Where and How to obtain it.
You can obtain ObjectProDSP from: sunsite.unc.edu
<ftp://sunsite.unc.edu/pub/Linux/devel/opd>, tsx-11.mit.edu
<ftp://tsx-11.mit.edu/pub/linux/packages/dsp>, or ftp.funet.fi
<ftp://ftp.funet.fi/pub/OS/Linux/util/electronics/opd>. There
are a number of files that comprise the package, some of the
quite large so be prepared.

-----BEGIN PGP SIGNED MESSAGE-----

*** The `Linux AX25 HOWTO' is posted automatically by the
*** Linux HOWTO coordinator, Greg Hankins <gregh@sunsite.unc.edu>. Please
*** direct any comments or questions about this HOWTO to the author,
*** Terry Dawson <terry@perf.no.itg.telecom.com.au>.

- --- BEGIN Linux AX25 HOWTO part 1/2 ---

Linux AX25-HOWTO, Amateur Radio.
Terry Dawson, VK2KTJ, terry@perf.no.itg.telecom.com.au
v1.1, 14 June 1996

The Linux Operating System is perhaps the only operating system in the
world that can boast native and standard support for the AX.25 packet
radio protocol utilised by Amateur Radio Operators worldwide. This
document aims to describe how to install and configure this support.

1. Introduction.

This document was originally an appendix to the HAM-HOWTO, but grew
too large to be reasonably managed in that fashion. This document
describes how to install and configure the native AX.25 and NetRom
support for Linux. A few typical configurations are described that
could be used as models to work from.

1.1. Changes from the previous version

Additions:
Baycom support - ye gads!

Corrections/Updates:
Included SLIP support in kernel config - oops.
2.0.0 kernel and ax25-tools update.
Updated net-tools to 1.32-alpha version.
Removed Jonathons `special' net-tools.
A bit of shuffling about to make more sense.
Updated the example configurations.
A minor copyright ooops.

1.2. Other related documentation.

There is a lot of related documentation. There are many documents that
relate to Linux networking in more general ways and I strongly
```

recommend you also read these as they will assist you in your efforts and provide you with stronger insight into other possible configurations.

They are:

The HAM-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/HAM-HOWTO.html>

the Net-2-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/NET-2-HOWTO.html>

the Ethernet-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Ethernet-HOWTO.html>

the IPX-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/IPX-HOWTO.html>

and

the Firewall-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/Firewall-HOWTO.html>

2. Where to obtain new versions of this document.

The best place to obtain the latest version of this document is from a Linux Documentation Project archive. The Linux Documentation Project runs a Web Server and this document appears there as The AX25-HOWTO <http://sunsite.unc.edu/mdw/HOWTO/AX25-HOWTO.html>. You can always contact me, but I pass new versions of the document directly to the LDP HOWTO coordinator, so if it isn't there then chances are I haven't finished it.

3. Linux and the AX.25 and NetRom Packet Radio Protocols.

The AX.25 protocol offers both connected and connectionless modes of operation, and is used either by itself for point-point links, or to carry other protocols such as TCP/IP and NetRom.

It is similar to X.25 level 2 in structure, with some extensions to make it more useful in the amateur radio environment.

The NetRom protocol is an attempt at a full network protocol and uses AX.25 at its lowest layer as a datalink protocol. It provides a network layer that is an adapted form of AX.25.

Alan Cox developed some early kernel based AX.25 software support for Linux. Jonathon Naylor <g4klx@g4klx.demon.co.uk> has taken up ongoing development of the code, has added NetRom support and is now the developer of the AX.25 related kernel code and utilities. DAMA support was developed by Joerg, DL1BKE. Finally Baycom support was added by Thomas Sailer, <sailer@ife.ee.ethz.ch>.

The Linux code supports KISS based TNC's (Terminal Node Controllers), the Ottawa PI card, the Gracilis PacketTwin card and other Z8530 SCC based cards with the generic SCC driver and both the Parallel and Serial port Baycom modems.

The User programs contain a simple PMS (Personal Message System), a beacon facility, a line mode connect program, `listen' an example of how to capture all AX.25 frames at raw interface level and programs to configure the NetRom protocol. Included also are an AX.25 server style program to handle and despatch incoming AX.25 connections and a NetRom daemon which does most of the hard work for NetRom support.

4. The AX.25/NetRom software components.

The AX.25 software is comprised of three components, the kernel source, the network configuration tools and the utility programs.

The version 1.3.xx Linux kernels include the AX.25, NetRom, Z8530 SCC, PI card and PacketTwin drivers by default. I recommend you obtain and use the version 1.3.xx kernel source.

These are three reasons I'm recommending you use the alpha version software even though most everyone else will recommend you don't use it:

- it makes the process of building and configuring the software a whole lot simpler. There are no patches to apply it is a simple matter of configuring and compiling a kernel with the appropriate options enabled.

- it is the most recent software and is most likely to provide the most satisfactory results.

- like all new software, it needs testing and bug reports. The more people that take the software and attempt to use it in their own configurations the more likely it will be that bugs are uncovered and the easier it will be to get the software debugged. Join the team, contribute bug reports and help everybody.

Be warned though, this software is alpha and may have problem that you wouldn't otherwise encounter. Please take all the usual precautions and be sure to keep a working kernel as backup when testing new kernels. It is wise to test a new kernel by booting from it from floppy before actually installing it with lilo, though I haven't bothered for about 90 kernels revisions so I'm fairly confident you can pretty safely run with alpha kernels.

4.1. Finding the kernel, tools and utility packages.

4.1.1. The kernel source:

The kernel source can be found in its usual place at:

ftp.funet.fi

/pub/Linux/PEOPLE/Linus/v2.0/

4.1.2. The network tools:

The latest alpha release of the standard Linux network tools support AX.25 and NetRom and can be found at:

ftp.inka.de

/pub/comp/Linux/networking/net-tools/net-tools-1.32-alpha.tar.gz

or:

ftp.linux.org.uk

/pub/linux/Networking/PROGRAMS/NetTools/net-tools-1.32-alpha.tar.gz

The latest ipfwadm package can be found at:

ftp.xos.nl

/pub/linux/ipfwadm/

4.1.3. The AX25 utilities:

The AX.25 utility programs can be found at:

sunsite.unc.edu

/pub/Linux/apps/ham/ax25-utils-2.0.0.tar.gz

or:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/ax25-utils-2.0.0.tar.gz

5. Installing the AX.25/NetRom software.

To successfully install AX.25 support on your linux system you must configure and install an appropriate kernel and then install the AX.25 utilities.

5.1. Compiling the kernel.

If you are already familiar with the process of compiling the Linux Kernel then you can skip this section, just be sure to select the appropriate options when compiling the kernel. If you are not, then read on.

The normal place for the kernel source to be unpacked to is the /usr/src directory into a subdirectory called linux. To do this you should be logged in as root and execute a series of commands similar to the following:

```
# mv linux linux.old
# cd /usr/src
# gzip -dc linux-2.0.0.tar.gz | tar xvofp -
# cd linux
```

After you have unpacked the kernel source into place you need to run the configuration script and choose the options that suit your hardware configuration and the options that you wish built into your kernel. You do this by using the command:

```
# make config
```

You might also try:

```
# make menuconfig
```

if you prefer a full screen menu based method. I'm going to describe the original method, but you use whichever you are most comfortable with.

In either case you will be offered a range of options at which you must answer `Y' or `N'. (Note you may also answer `M' if you are using modules. For the sake of simplicity I will assume you are not, please make appropriate modifications if you are).

The options most relevant to an AX.25 configuration are:

```
Networking support (CONFIG_NET) [Y/n/?] Y
Loopback device support (CONFIG_BLK_DEV_LOOP) [N/y/m/?] Y
Network firewalls (CONFIG_FIREWALL) [N/y/?]
TCP/IP networking (CONFIG_INET) [Y/n/?] Y
IP: forwarding/gatewaying (CONFIG_IP_FORWARD) [N/y/?]
IP: firewalling (CONFIG_IP_FIREWALL) [N/y/?] (NEW)
IP: tunneling (CONFIG_NET_IPIP) [N/y/m/?] (NEW)
Amateur Radio AX.25 Level 2 (CONFIG_AX25) [N/y/?] Y
AX.25 over Ethernet (CONFIG_BPQETHER) [N/y/?] (NEW)
Amateur Radio NET/ROM (CONFIG_NETROM) [N/y/?] (NEW)
Kernel/User network link driver(ALPHA) (CONFIG_NETLINK) [N/y/?]
Network device support (CONFIG_NETDEVICES) [Y/n/?] Y
SLIP (serial line) support (CONFIG_SLIP) [N/y/m/?] Y
Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]
Z8530 SCC kiss emulation driver for AX.25 (CONFIG_SCC) [N/y/m/?]
Other ISA cards (CONFIG_NET_ISA) [N/y/?]
Ottawa PI and PI/2 support (CONFIG_PI) [N/y/?] (NEW)
Gracilis PackeTwin support (CONFIG_PT) [N/y/?] (NEW)
Standard/generic serial support (CONFIG_SERIAL) [Y/n/?]
```

The options I have flagged with a `Y' are those that you must must answer `Y' to. The rest are dependent on what hardware you have and what options you want to include. Some of these options are described in more detail later on, so if you don't know what you want yet, then read ahead and come back to this step later.

After you have completed the kernel configuration you should be able to cleanly compile your new kernel:

```
# make dep
# make clean
# make zImage
```

Make sure you move your arch/i386/boot/zImage file wherever you want it and then run lilo to ensure that you actually boot from it.

5.2. The network configuration tools.

After you have compiled the kernel you should compile the new network configuration tools. These tools allow you to modify the configuration of network devices and to add routes to the routing table.

The new alpha release of the standard net-tools package includes support for AX.25 and NetRom support. I've tested this and it seems to work well for me.
5.2.1. Building the standard net-tools release.

Don't forget to read the Release file and follow any instructions there. The steps I used to compile the tools were:

```
# cd /usr/src
# tar xvfz net-tools-1.32-alpha.tar.gz
# cd net-tools-1.32-alpha
# make config
```

At this stage you will be presented with a series of configuration questions, similar to the kernel configuration questions. Be sure to include support for all of the protocols and network devices types that you intend to use. If you do not know how to answer a particular question then answer `Y'.

The tools compiled cleanly against a 2.0.0 kernel without error.

When the compilation is complete, you should need only use the:

```
# make install
```

command to install the programs in their proper place.

If you wish to use the IP firewall facilities then you will need the latest firewall administration tool ipfwadm. This tool replaces the older ipfw tool which will not work with new kernels.

I compiled the ipfwadm utility with the following commands:

```
# cd /usr/src
# tar xvfz ipfwadm-2.0beta2.tar.gz
# cd ipfwadm-2.0beta2
# make install
# cp ipfwadm.8 /usr/man/man8
# cp ipfw.4 /usr/man/man4
```

5.3. The AX.25 user programs.

After you have successfully compiled and booted your new kernel, you need to compile the user programs. To compile and install the user programs you should use a series of commands similar to the following:

```
# cd /usr/local
# gzip -dc ax25-utils-2.0.0.tar.gz | tar xvvof -
# cd ax25-utils-2.0
# make install
```

The files will be installed under the /usr/local directory by default
in subdirectories: bin, sbin, etc and man.

If you get messages something like:

```
gcc -Wall -Wstrict-prototypes -O2 -I../lib -c call.c
call.c: In function `statline':
call.c:268: warning: implicit declaration of function `attron'
call.c:268: `A_REVERSE' undeclared (first use this function)
call.c:268: (Each undeclared identifier is reported only once
call.c:268: for each function it appears in.)
```

then you should read the README.ncurses file in the top level
directory. You can do as Jonathon suggests, or you can try replacing:

```
#include <curses.h>
```

with:

```
#include <ncurses/curses.h>
```

in the:

```
call/call.c
call/menu.c
```

files.

6. Configuring a RAW AX.25 connected mode interface.

The first stage to configuration of an AX.25 interface is to configure
it to work as a `vanilla' AX.25 interface with no TCP/IP. The
following configuration will get you to the point of being able to
make AX.25 calls from your Linux machine to other AX.25 nodes.

The AX.25 software has been designed to work with a TNC in kiss mode
or with other cards such as the Ottawa PI2 card, PacketTwin and other
SCC cards via special drivers that emulate a kiss tnc.

For real KISS TNC's there are two steps to complete in order to create
an AX.25 port ready to use to make outgoing calls. For other types of
hardware you need only complete the first step.

6.1. Creating the /usr/local/etc/axports file.

The AX.25 ports have a configuration file that is read by many
programs that want to find information about an AX.25 port. This file
is called the:

/usr/local/etc/axports

file. The format of the file is as follows:

```
portname callsign baudrate paclen window description
```

where:

portname
is a text name that you will refer to the port by.

callsign
is the AX.25 callsign you want to assign to the port.

baudrate
is the speed at which you wish the port to communicate with your
TNC.

paclen
is the maximum packet length you want to configure the port to
use for AX.25 connected mode connections.

window
is the AX.25 window (K) parameter. This is the same as the
MAXFRAME setting of many tnc's.

description
is a textual description of the port.

In my case, mine looks like:

radio VK2KTJ-0 4800 256 2 144.800 MHz

6.2. Creating the AX.25 device

If you are using an SCC card like the PI2 or PacketTwin then you do
not need to create the network device, as the kernel driver will
automatically do this for you. If you are using a KISS TNC then you
will need to create the AX.25 interface as it will not already exist.
Creating an AX.25 port is very similar to creating a slip device.

You will need to have the TNC preconfigured and connected to your
serial port. You can use a communications program like minicom or
seyon to configure the TNC into kiss mode if you wish.

You use the axattach program in much the same way as you would use the
slattach program (refer to the NET-2-HOWTO for more information on
slattach and the other network software for Linux). For example:

/usr/local/sbin/axattach /dev/ttyS0 radio

would configure your /dev/ttyS1 serial device to be a kiss interface
configured as per the details for the line beginning with the portname
"radio" in the /usr/local/etc/axports file.

All this step has done is to actually activate the device in the
kernel, you need to run other programs before you an actually make use
of the port.

6.2.1. Setting the callsign for SCC cards.

If you are using a PI or PacketTwin card then you should use the
axparms -setcall command to change the callsign of the appropriate
port to that which you intend to use. Refer to the PI/PacketTwin

section for the names of the network devices to use.

6.2.2. Testing the interface.

You now should be able to make outgoing AX.25 connections. To test AX.25 connected mode you could use the call program as demonstrated:

/usr/local/bin/call radio VK2DAY via VK2SUT

Note: you must tell call which AX.25 port you wish to make the call on, as the same AX.25 node might be reachable on any of the ports you have configured.

The call program is a linemode terminal program for making AX.25 calls. It recognises lines that start with `~' as command lines. The `~.' command will close the connection.

Please refer to the man pages in /usr/local/man and the README file in ax25-utils-2.0.0 distribution for more information.

7. Configuring an AX.25 interface for tcp/ip.

It is very simple to configure an AX.25 port to carry tcp/ip. Jonathon has modified the axattach command so that you can include the IP address that you want the interface to be configured with on the command line. For example, to modify the example presented earlier, I could use the command:

```
# /usr/local/sbin/axattach -i 44.136.8.5 -m 512 /dev/ttyS0 radio
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

to create the AX.25 interface with an IP address of 44.136.8.6 and an MTU of 512 bytes. You should still use the ifconfig to configure the other parameters if necessary.

You do not need to do it this way, you can of course just use the ifconfig program to configure the ip address and netmask details for the port and add a route via the port, just as you would for any other tcp/ip interface.

```
# /sbin/ifconfig sl0 44.136.8.5
# /sbin/ifconfig sl0 netmask 255.255.255.0
# /sbin/ifconfig sl0 broadcast 44.136.8.255
# /sbin/ifconfig sl0 arp mtu 256 up
# /sbin/route add -net 44.136.8.0 sl0
# /sbin/route add default sl0
```

The commands listed above are typical of the sort of configuration many of you would be familiar with if you have used NOS or any of its derivatives or any other tcp/ip software. Note that the default route might not be required in your configuration if you have some other network device configured.

To test it out, try a ping or a telnet to a local host.

```
# ping -i 5 44.136.8.58
```

Note the use of the `-i 5' arguments to ping to tell it to send pings every 5 seconds instead of its default of 1 second.

8. Configuring an AX.25 interface for NetRom.

To configure NetRom on an AX.25 interface you must configure two files.

8.1. Configuring /usr/local/etc/nrports

The first is the /usr/local/etc/nrports file. This file describes the NetRom port in much the same way as the /usr/local/etc/axports file describes the AX.25 ports.

This file is formatted as follows:

```
name callsign alias paclen description
```

Where:

name
is the text name that you wish to refer to the port by.

callsign
is the callsign that the NetRom traffic from this port will use.
alias
is the NetRom alias this port will have assigned to it.

paclen
is the maximum size of NetRom frames transmitted by this port.

description
is a free text description of the port.

An example would look something like the following:

```
netrom VK2KTJ-1 LINUX 235 Linux Switch Port
```

Note that the ports are referred to by name by programs such as call.

8.2. Configuring /usr/local/etc/nrbroadcast

The second file is the /usr/local/etc/nrbroadcast file.

This file is formatted as follows:

```
axport min_obs def_qual worst_qual verbose
```

Where:

axport
is the port name obtained from the /usr/local/etc/axports file.
If you do not have an entry in /usr/local/etc/nrbroadcasts for a port then this means that no NetRom routing will occur and any received NetRom broadcasts will be ignored for that port.

min_obs
is the minimum obselesence value for the port.

def_qual
is the default quality for the port.

worst_qual
is the worst quality value for the port, any routes under this
quality will be ignored.

verbose
is a flag determining whether full NetRom routing broadcasts
will occur from this port or only a routing broadcast
advertising the node itself.

An example would look something like the following:

radio 1 200 10 1

8.3. Creating the NetRom device

When you have the two configuration files completed you must create
the NetRom device in much the same way as you did for the AX.25
devices. This time you use the nrattach command:

nrattach netrom

This command would start the NetRom device (nr0) named netrom
configured with the details specified in the /usr/local/etc/nrports
file.

8.4. Starting the NetRom daemon

The NetRom daemon manages the NetRom routing tables and generates the
NetRom routing broadcasts. You start NetRom with the command:

/usr/local/sbin/netromd

You should soon see the /proc/net/nr_neigh file filling up with
information about your NetRom neighbours.

Remember to put the /usr/local/sbin/netromd command in your rc files
so that it is started automatically each time you reboot.

9. Configuring IP on a NetRom interface.

Configuring a NetRom interface for tcp/ip is almost identical to
configuring an AX.25 interface for tcp/ip.

Again you can either specify the ip address and mtu on the nrattach
command line, or use the ifconfig and route commands, but you need to
manually add arp entries for hosts you wish to route to because there
is no mechanism available for your machine to learn what NetRom
address it should use to reach a particular IP host.

So, to create an nr0 device with an IP address of 44.136.8.5 and an
mtu of 512 and configured with the details from the

/usr/local/etc/nrports file for a NetRom port named netrom you would use:

```
# /usr/local/sbin/nrattach -i 44.136.8.5 -m 512 netrom
# route add 44.136.8.5 nr0
```

or you could use something like the following commands manually:

```
# ifconfig nr0 44.136.8.5 hw netrom VK2KTJ-1
# route add 44.136.8.5 nr0
```

Then for each IP host you wish to reach via NetRom you need to set route and arp entries. To reach a destination host with an IP address of 44.136.80.4 at NetRom address BBS:VK3BBS via a NetRom neighbour with callsign VK2SUT-0 you would use commands as follows:

```
# route add 44.136.80.4 nr0
# arp -t netrom -s 44.136.80.4 vk2sut-0
# nrparms -nodes vk3bbs + BBS 120 6 sl0 vk2sut-0
```

The `120' and `6' arguments to the nrparms command are the NetRom quality and obsolescence count values for the route.

10. Configuring an Ethernet device for AX.25 ala BPQ

Linux support BPQ Ethernet compatibility. This enables you to run the AX.25 protocol over your Ethernet LAN and to interwork your linux machine with other BPQ machines on the LAN.

Configuration is quite straightforward. You firstly must have configured a standard Ethernet device. This means you will have compiled your kernel to support your Ethernet card, and executed configuration commands similar to the following:

```
# ifconfig eth0 44.136.8.5 netmask 255.255.255.248 up
# ifconfig eth0 broadcast 44.136.8.103
# route add -net 44.136.8.96 netmask 255.255.255.248 eth0
```

To configure the BPQ support you need to associate an AX.25 callsign with your Ethernet hardware address. You should use the following:

```
# axparms -dev eth0 vk2ktj-9
```

This says that AX.25 callsign vk2ktj-9 is associated with the eth0 device.

BPQ Ethernet normally uses a multicast address. The Linux implementation does not, and instead it uses the normal Ethernet broadcast address. The NET.CFG file for the BPQ ODI driver should therefore look similar to this:

```
LINK SUPPORT

MAX STACKS 1
MAX BOARDS 1
```

```
LINK DRIVER E2000 ; or other MLID to suit your card

INT 10 ;
PORT 300 ; to suit your card

FRAME ETHERNET_II

PROTOCOL BPQ 8FF ETHERNET_II ; required for BPQ - can change PID

BPQPARMS ; optional - only needed if you want
; to override the default target addr

ETH_ADDR FF:FF:FF:FF:FF:FF ; Target address
```

11. Ottawa PI/PI2 card driver and Gracilis PacketTwin driver.

The Ottawa PI and the Gracilis PacketTwin are Z8530 SCC based card for IBM PC type machines that are in common usage by Amateur Radio operators worldwide. The PI card supports a high speed half duplex (single DMA channel) port, and a low speed (<9k6bps interrupt driven) half duplex port. The PI2 is a new version of the card that supports an on board radio modem and improved hardware design. The PacketTwin card supports two high speed port and is capable of accepting on board modems.

The PI card driver was written by David Perry, <dp@hydra.carleton.edu> The PacketTwin card driver was written by Craig Small VK2XLZ, <csmall@triode.apana.org.au>. Both drivers are a standard feature of the 1.3.xx kernel.

Please refer to the AX.25 section above for details on how to configure the kernel to include the PI card or the PacketTwin card drivers.

Once you have the appropriate driver configured into your kernel then you should reboot and when you do, you should see mention of the PI or PacketTwin card driver in the messages that appear on the screen while the kernel is booting. The drivers test each of the I/O port addresses that the card might be configured for and reports any that it finds. You should then look at the /proc/net/dev file and you should see reference to devices called pi0a and pi0b or pt0a and pt0b for the PI and PacketTwin cards respectively.

If the devices don't appear then recheck that you have configured and compiled your kernel correctly and that you are in fact actually running your new kernel. If you still don't then this suggests that your PI or PacketTwin card was not detected by the kernel while it booted and may indicate that you have some sort of hardware conflicting with your PI/PT card that prevented it being detected.

If all of the above went as planned then you will need to configure your PI/PT card with an AX.25 address and for IP. The configuration of the PI/PT cards is virtually identical to that of any other IP interface. Something like the following should work ok for you:

```
# /usr/local/sbin/axparms -setcall pi0a VK2KTJ-2
# /sbin/ifconfig pi0a 44.136.8.5
# /sbin/ifconfig pi0a netmask 255.255.255.0
# /sbin/ifconfig pi0a broadcast 44.136.8.255
# /sbin/ifconfig pi0a arp mtu 256 up
# /sbin/route add -net 44.136.8.0 pi0a
# /sbin/route add default pi0a
```

Note that pi0a refers to the `a' port on the first PI card found, and that pi0b would therefore refer to the `b' port on the first PI card found. pt0a would therefore be the first port on the first PacketTwin card detected.

Note also the use of the axparms -setcall command to set the AX.25 callsign of the port.

As usual, when this has been done you can test the interface with the ping or telnet command to ensure it is working.

12. Z8530 SCC Kiss Emulation

Joerg Reuter, DL1BKE has developed generic support for Z8530 SCC based cards. His driver is configurable to support a range of different types of cards and present an interface that looks like a KISS TNC so you can treat it as though it were a KISS TNC.

12.1. Obtaining and building the configuration tool package.

The kernel driver is included in the standard kernel distribution, but there are a suite of configuration tools that you will need to obtain as well.

To compile the kernel support you must be sure to answer `Y' to: `Z8530 SCC kiss emulation driver for AX.25' when asked during a kernel `make config'.

You can obtain the configuration tools package from:

ftp.ucsd.edu

/hamradio/packet/tcpip/incoming/z8530drv-2.0.dl1bke.real.tar.gz

The following command were what I used to compile and install the package for kernel version 1.3.93:

```
# cd /usr/src
# gzip -dc z8530drv-2.0.dl1bke.real.tar.gz | tar xvpofz -
# cd z8530drv
# rm gencfg sccinit sccstat
# make dep
# make utils
# make install
```

Note: I've not followed the instructions included because the version of driver in the 2.0.0 kernel is actually newer than that included in the package and the normal installation process would have overwritten

the new kernel source with the older version.

After the above is complete you should have three new programs installed in your /sbin directory: gencfg, sccinit and sccstat. It is these programs that you will use to configure the driver for your card.

You will also have a group of new special device files created in your /dev called scc0 .. scc7. These will be used later and will be the `KISS' devices you will end up using.

12.2. Configuring the driver for your card.

The z8530 SCC driver has been designed to be as flexible as possible so as to support as many different types of cards as possible. With this flexibility has come some cost in configuration.

There is more comprehensive documentation in the package and you should read this if you have any problems. You should particularly look at doc/scc_eng.doc or doc/scc_ger.doc for more detailed information. I've paraphrased the important details, but as a result there is a lot of lower level detail that I have not included.

The main configuration file is read by the sccinit program and is called /etc/z8530drv.rc. This file is broken into two main stages: Configuration of the hardware parameters and channel configuration. After you have configured this file you need only add:

sccinit

into the rc file that configures your network and the driver will be initialised according to the contents of the configuration file. You must do this before you attempt to use the driver.

12.2.1. Configuration of the hardware parameters.

The first section is broken into stanzas, each stanza representing an 8530 chip. Each stanza is a list of keywords with arguments. You may specify up to four SCC chips in this file by default. The #define MAXSCC 4 in scc.c can be increased if you require support for more.

The allowable keywords and arguments are:

chip
the chip keyword is used to separate stanzas. It will take anything as an argument. The arguments are not used.

data_a
this keyword is used to specify the address of the data port for the z8530 channel `A'. The argument is a hexadecimal number e.g. 0x300

ctrl_a
this keyword is used to specify the address of the control port for the z8530 channel `A'. The arguments is a hexadecimal number

e.g. 0x304

data_b
this keyword is used to specify the address of the data port for the z8530 channel `B'. The argument is a hexadecimal number e.g. 0x301

ctrl_b
this keyword is used to specify the address of the control port for the z8530 channel `B'. The arguments is a hexadecimal number e.g. 0x305

irq
this keyword is used to specify the IRQ used by the 8530 SCC described in this stanza. The argument is an integer e.g. 5

pclock
this keyword is used to specify the frequency of the clock at the PCLK pin of the 8530. The argument is an integer frequency in Hz which defaults to 4915200 if the keyword is not supplied.

board
the type of board supporting this 8530 SCC. The argument is a character string. The allowed values are:

PA0HZP
the PA0HZP SCC Card

EAGLE
the Eagle card

PC100
the DRSI PC100 SCC card

PRIMUS
the PRIMUS-PC (DG9BL) card

BAYCOM
BayCom (U)SCC card

escc
this keyword is optional and is used to enable support for the Extended SCC chips (ESCC) such as the 8580, 85180, or the 85280. The argument is a character string with allowed values of `yes' or `no'. The default is `no'.

vector
this keyword is optional and specifies the address of the vector latch (also known as "intack port") for PA0HZP cards. There can be only one vector latch for all chips. The default is 0.

special
this keyword is optional and specifies the address of the special function register on several cards. The default is 0.

```
option
this keyword is optional and defaults to 0.

Some example configurations for the more popular cards are as follows:

BayCom USCC

chip 1
data_a 0x300
ctrl_a 0x304
data_b 0x301
ctrl_b 0x305
irq 5
board BAYCOM
#
# SCC chip 2
#
chip 2
data_a 0x302
ctrl_a 0x306
data_b 0x303
ctrl_b 0x307
board BAYCOM

PA0HZP SCC card

chip 1
data_a 0x153
data_b 0x151
ctrl_a 0x152
ctrl_b 0x150
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no
#
#
#
chip 2
data_a 0x157
data_b 0x155
ctrl_a 0x156
ctrl_b 0x154
irq 9
pclock 4915200
board PA0HZP
vector 0x168
escc no

DRSI SCC card
```

```
chip 1
data_a 0x303
data_b 0x301
ctrl_a 0x302
ctrl_b 0x300
irq 7
pclock 4915200
board DRSI
escc no
```

If you already have a working configuration for your card under NOS, then you can use the gencfg command to convert the PE1CHL NOS driver commands into a form suitable for use in the z8530 driver configuration file.

To use gencfg you simply invoke it with the same parameters as you used for the PE1CHL driver in NET/NOS. For example:

```
# gencfg 2 0x150 4 2 0 1 0x168 9 4915200
```

will generate a skeleton configuration for the OptoSCC card.

12.2.2. Channel Configuration

The Channel Configuration section is where you specify all of the other parameters associated with the port you are configuring. Again this section is broken into stanzas. One stanza represents one logical port, and therefore there would be two of these for each one of the hardware parameters stanzas as each 8530 SCC supports two ports.

These keywords and arguments are also written to the /etc/z8530drv.rc file and must appear after the hardware parameters section.

Sequence is very important in this section, but if you stick with the suggested sequence it should work ok. The keywords and arguments are:

device
this keyword must be the first line of a port definition and specifies the name of the special device file that the rest of the configuration applies to. e.g. /dev/scc0

speed
this keyword specifies the speed in bits per second of the interface. The argument is an integer: e.g. 1200

clock
this keyword specifies where the clock for the data will be sourced. Allowable values are:

dpll
normal halfduplex operation

external
MODEM supplies its own Rx/Tx clock

divider
use fullduplex divider if installed.

mode
this keyword specifies the data coding to be used. Allowable
arguments are: nrzi or nrz

rxbuffers
this keyword specifies the number of receive buffers to allocate
memory for. The argument is an integer, e.g. 8.

txbuffers
this keyword specifies the number of transmit buffers to
allocate memory for. The argument is an integer, e.g. 8.

bufsize
this keyword specifies the size of the receive and transmit
buffers. The arguments is in bytes and represents the total
length of the frame, so it must also take into account the AX.25
headers and not just the length of the data field. This keyword
is optional and default to 384

txdelay
the KISS transmit delay value, the argument is an integer in mS.

persist
the KISS persist value, the argument is an integer.

slot
the KISS slot time value, the argument is an integer in mS.

tail
the KISS transmit tail value, the argument is an integer in mS.

fulldup
the KISS full duplex flag, the argument is an integer. 1==Full
Duplex, 0==Half Duplex.

wait
the KISS wait value, the argument is an integer in mS.

min
the KISS min value, the argument is an integer in S.

maxkey
the KISS maximum keyup time, the argument is an integer in S.

idle
the KISS idle timer value, the argument is an integer in S.

maxdef
the KISS maxdef value, the argument is an integer.

group
the KISS group value, the argument is an integer.

txoff
the KISS txoff value, the argument is an integer in mS.

softdcd
the KISS softdcd value, the argument is an integer.

slip
the KISS slip flag, the argument is an integer.

12.3. Using the driver.

To use the driver you simply treat the /dev/scc* devices just as you would a serial tty device with a KISS TNC connected to it. For example, to configure Linux Kernel networking to use your SCC card you could use something like:

axattach -s 4800 /dev/scc0 VK2KTJ

You can also use NOS to attach to it in precisely the same way. From JNOS for example you would use something like:
attach asy scc0 0 ax25 scc0 256 256 4800

12.4. The sccstat and sccparam tools.

To assist in the diagnosis of problems you can use the sccstat program to display the current configuration of an SCC device. To use it try:

sccstat /dev/scc0

you will displayed a very large amount of information relating to the configuration and health of the /dev/scc0 SCC port.

The sccparam command allows you to change or modify a configuration after you have booted. Its syntax is very similar to the NOS param command, so to set the txtail setting of a device to 100mS you would use:

sccparam /dev/scc0 txtail 0x8

13. Configuring an interface for a Baycom modem.

Thomas Sailer, <sailer@ife.ee.ethz.ch>, despite the popularly held belief that it would not work very well, has developed Linux support for Baycom modems. His driver supports the Ser12 serial port, Par96 and the enhanced Par97 parallel port modems.

When the driver is running it follows the standard of looking like a KISS interface, so you treat it in much the same way as you would the PI card, PacketTwin or SCC driver ports.

13.1. Compiling the kernel

The driver is only available as a module, so you must have compiled module support into your kernel, and also selected the appopriate options to support the Baycom driver during the make config stage when compiling your kernel.

The relevant options that you must answer `Y' for are:

Radio network interfaces (CONFIG_NET_RADIO) [N/y/?]
BAYCOM ser12 and par96 kiss emulation driver for AX.25 (CONFIG_BAYCOM) [N/y/m/?]

13.2. Creating the /dev device files.

The Baycom driver uses special device files in the /dev directory.
You need to create these manually. The following commands should work
ok for you:

mknod /dev/bc0 c 60 0
mknod /dev/bc1 c 60 1
mknod /dev/bc2 c 60 2
mknod /dev/bc3 c 60 3

You will use these later.

13.3. Loading the module.

When the kernel compilation is complete and you have installed the
module baycom.o wherever you normally keep your modules
(conventionally they are stored in /lib/modules/2.0.0/), you must
start the module. The module takes configuration paramters from the
insmod command line, so you must start it manually from an rc file or
if you use the kerneld program you must configure it with the relevant
paramters so that it supplies them when it loads the module.

If you use kerneld you will need to add the following line to your
/etc/conf.modules file:

alias char-major-60 baycom

There are four main items to specify when loading the module, they
are:

modem
the baycom modem type you are configuring it for.

1. Ser12 type modem.

2. Par96 or Par97 type modem.

iobase
the i/o address of the serial or parallel port you will use.

0x3f8
COM1:

0x2f8
COM2:

0x378
LPT1:

0x278
LPT2:

irq
the Interrupt Request (IRQ) line your port will use.

4 COM1:

3 COM2:

7 LPT1:

5 LPT2:

options
some baycom specific options.

0 use hardware generated DCD signal.

1 use software DCD signal.

13.4. A small trap to be aware of.

Because the Baycom driver uses the serial and parallel ports of your machines, and because it is a low level driver for these, it competes with the existing serial and parallel drivers in the kernel. There are some ways of working around this problem. The first way is to make sure that you load the Baycom module first so that it takes the hardware it needs before the serial or parallel device driver modules load and search for their own. With the serial driver you have the luxury of being able to disable it for a single port using the setserial command, this will be demonstrated in the examples. If you are using the parallel port modems then beware of the lp.o Line Printer and plip.o Parallel Line IP modules.

13.5. Some example configurations.

These examples are for the two most common configurations.

Disable the serial driver for COM1: then configure the Baycom driver for a Ser12 serial port modem on COM1: with the software DCD option enabled:

```
# setserial /dev/ttyS0 uart none
# insmod baycom modem=1 iobase=0x3f8 irq=4 options=1
```

Par96 parallel port type modem on LPT1: using hardware DCD detection:

```
# insmod baycom modem=2 iobase=0x378 irq=7 options=0
```

The first device created is /dev/bc0, the second is /dev/bc1 etc.

13.6. Configuring multiple devices.

Using the insmod program and its command line arguments you can only configure one Baycom modem. There is a setbaycom utility which I have not yet located that will allow you to configure others. If you happen to find it please let me know where it is kept so that I can include details for it here.

13.7. Actually using the devices.

This device driver when loaded looks like a serial tty driver with a KISS TNC attached. This means that configuration of the AX.25 software for this driver is identical to the configuration for a KISS TNC presented earlier. You need to use the axattach program and add the port to your /usr/local/etc/axports file. The only difference is that you would use the device /dev/bc0 instead of /dev/ttyS0.

14. Configuring ax25d to accept incoming AX.25/Netrom connections.

Linux is a powerful operating system and offers a great deal of flexibility in how it is configured. With this flexibility comes a cost in configuring it to do what you want. When configuring your Linux machine to accept incoming AX.25 or NetRom connections there are a number of questions you need to ask yourself. The most important of which is: "What do I want users to see when they connect?". As detailed in the HAM-HOWTO there are BBS systems that are being developed that you might want users to see when they connect, alternatively you might want to give users a login prompt so that they can make use of a shell account, or you might even have written your own program, such as a customised database or a game, that you want people to connect to. Whatever you choose, you must tell the AX.25 software about this so that it knows what software to run when it accepts an incoming AX.25 connection.

14.1. Creating the /usr/local/etc/ax25d.conf file.

This file is the configuration file for the ax25d AX.25 daemon which handles incoming AX.25 and NetRom connections.

The file is a little cryptic looking at first, but you'll soon discover it is very simple in practice, with a small trap for you to be wary of.

The format of the ax25d.conf file is as follows:

```
# This is a comment and is ignored by the ax25d program.
[<interface_call>]
<peer1> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer2> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
defaults window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
<peer3> window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
default window T1 T2 T3 N2 <mode> <uid> <cmd> <cmd-name> <arguments>
```

Where:

at the start of a line marks a comment and is completely ignored by the ax25d program.

<interface_call>
is the AX.25 callsign of the AX.25 or NetRom interface that this particular paragraph is for.

<peer>
is the callsign of the peer node that this particular
configuration applies to. If you don't specify an SSID here then
any SSID will match.

window
is the AX.25 Window parameter (K) or MAXFRAME parameter for this
configuration.

T1 is the Frame retransmission (T1) timer in half second units.

T2 is the amount of time the AX.25 software will wait for another
incoming frame before preparing a response in 1 second units.

T3 is the amount of time of inactivity before the AX.25 software
will disconnect the session in 1 second units.

N2 is the number of consecutive retransmissions that will occur
before the connection is closed.

<mode>
provides a mechanism for determining certain types of general
permissions. The modes are enabled or disabled by setting or
resetting bits in an 8 bit map. You set that map by setting
<mode> to the sum of the following values:

1 Setup utmp, and run on a ptty (planned).

2 UNUSED.

4 UNUSED.

8 UNUSED.

16 UNUSED.

32 UNUSED.

64 Disallow digipeated uplinks, only allow direct connections.

128
Lockout, Barred, immediate disconnect.

<uid>
is the userid that the program to be run to support the
connection should be run as.

<cmd>
is the full pathname of the command to be run, with no arguments
specified.

<cmd-name>
is the text that should appear in a ps as the command name
running (normally the same as <cmd> except without the directory
path information.

<arguments>
are the command line argument to be passed to the <:cmd> when it is run. You pass useful information into these arguments by use of the following tokens:

%U AX.25 callsign of the connected party without the SSID, in uppercase.

%u AX.25 callsign of the connected party without the SSID, in lowercase.

%S AX.25 callsign of the connected party with the SSID, in uppercase.

%s AX.25 callsign of the connected party with the SSID, in lowercase.

You need one section in the above format for each AX.25 or NetRom interface you want to accept incoming AX.25 or NetRom connections on.

There are two special lines in the paragraph, one starts with the string `defaults' and other starts with the string `default' (yes there is a difference). These lines serve special functions.

The `default' lines purpose should be obvious, this line acts as a catch-all, so that any incoming connection on the <interface_call> interface that doesn't have a specific rule will match the `default' rule. If you don't have a `default' rule, then any connections not matching any specific rule will be disconnected immediately without notice.

The `defaults' line is a little more subtle, and here is the trap I mentioned earlier. In any of the fields for any definition for a peer you can use the `*' character to say `use the default value'. The `default' line is what sets those default values. The kernel software itself has some defaults which will be used if you don't specify any. The trap is that the these defaults apply only to those rules below the `default' line not to those above. You may have more than one `default' rule per interface definition, and in this way you may create groups of default configurations.

14.2. A simple example ax25d.conf file.

Ok, an illustrative example:

```
# ax25d.conf for VK2KTJ - 21/11/95
# This configuration uses the AX.25 port defined earlier.
[VK2KTJ-1]
NOCALL * * * * * 0 guest /usr/games/fortune
defaults 1 10 * * * 0 root /usr/local/sbin/axspawn axspawn %u +
VK2XLZ-1 * * * * * * * * *
VK2DAY-1 * * * * * * * * *
default 1 10 5 100 5 0 root /usr/local/bin/pms pms -a -o vk2ktj
#
```

This example says that anybody connecting to the interface on my machine with the callsign VK2KTJ-1 will have the following rules applied:

Anyone whose callsign is set to `NOCALL' should use the kernel default parameters and have the fortune program run as guest for them.

The defaults line changes two parameters from the kernel defaults (Window and T1) and will run the /usr/local/sbin/axspawn program for them. Any copies of /usr/local/sbin/axspawn run this way will appear as axspawn in a ps listing for convenience. The next two lines definitions for two stations who will receive those permissions.

The last line in the paragraph is the `catch all' definition that everybody else will get (including VK2XLZ and VK2DAY using any other SSID other than -1). This definition sets all of the parameters implicitly and will cause the pms program to be run with a command line argument indicating that it is being run for an AX.25 connection (assuming VK2KTJ-1 to be an AX.25 interface) and that the owner callsign is VK2KTJ. (See the `Configuring the PMS' section below for more details).

If you wanted to define rules for another interface, a NetRom interface for example, then you would add another paragraph coded in the same way with rules and callsign appropriate to it.

This example is a contrived one but I think it illustrates clearly the important features of the syntax of the configuration file. Jonathon includes a much longer and more detailed example in the ax25-utils package that you should look at if you need more information.

14.3. Starting ax25d

When you have the two configuration files completed you start ax25d with the command:

/usr/local/sbin/ax25d

When this is run people should be able to make AX.25 connections to your Linux machine. Remember to put the ax25d command in your rc files so that it is started automatically when you reboot each time.

14.4. Configuring axspawn.

The axspawn program is a simple program that allows AX.25 stations who connect to be log in to your machine. It is invoked from the ax25d program as described above. To allow a user to log in to your machine you should add a line similar to the following into your /usr/local/etc/ax25d.conf file:

default * * * * * 1 root /usr/local/sbin/axspawn axspawn %u

If the line ends in the + character then the connecting user must hit return before they will be allowed to login. The default is to not wait. Any individual host configurations that follow this line will

have the axspawn program run when they connect. When axspawn is run it first checks that the command line argument it is supplied is a legal callsign, strips the SSID, then it checks that /etc/passwd file to see if that user has an account configured. If there is an account, and the password is either "" (null) or + then the user is logged in, if there is anything in the password field the user is prompted to enter a password. If there is not an existing account in the /etc/passwd file then axspawn may be configured to automatically create one.

14.4.1. Creating the /usr/local/etc/axspawn.conf file.

You can alter the behaviour of axspawn in various ways by use of the /usr/local/etc/axspawn.conf file. This file is formatted as follows:

```
# /usr/local/etc/axspawn.conf
#
# allow automatic creation of user accounts
create yes
#
# guest user if above is 'no' or everything else fails. Disable with "no"
guest no
#
# group id or name for autoaccount
group ax25
#
# first user id to use
first_uid 2001
#
# maximum user id
max_uid 3000
#
# where to add the home directory for the new users
home /home/ax25
#
# user shell
shell /bin/bash
#
# bind user id to callsign for outgoing connects.
associate yes
```

The eight configurable characteristics of axspawn are as follows:

```
# indicates a comment.
```

```
create
if this field is set to yes then axspawn will attempt to
automatically create a user account for any user who connects
and does not already have an entry in the /etc/passwd file.
```

```
guest
this field names the login name of the account that will be used
for people who connect who do not already have accounts if
```

create is set to no. This is usually ax25 or guest.

group
this field names the group name that will be used for any users
who connect and do not already have an entry in the /etc/passwd
file.

first_uid
this is the number of the first userid that will be
automatically created for new users.

max_uid
this is the maximum number that will be used for the userid of
new users.

home
this is the home (login) directory of new users.

>
> 73, de Art
>**********

ART HAVE YOU SEEN THESE: THE FIRST HAS QSL DIRECT AS WELL AS MANAGERS.

http://www.systemtechnik.tu-ilmenau.de/ham/qsldb_gate.html

QSL Managers
QSL managers information maintained by Lothar, DL1SBF
Addresses for QSLing directly maintained by DL1SBF
QSLinfo database maintained by ON6DP

SECOND IS BUCKMASTER IT HAS SOME FOREIGN CALL DATA BASES SUCH AS VP2EE
AND OTHERS. NOT SURE WHAT IS ALL COVERED -- MAYBE E-MAIL THEM.

http://www.buck.com/cgi-bin/do_hamcall

SOME E-MAIL ADDRESSES INCLUDING FOREIGN HAMS CAN BE FOUND AT:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/hams_on_usenet

MAYBE TRY:

http://www-dx.deis.unibo.it/htlzh/qsl.html

AT KA9FOX WWW PAGE IS THE FOLLOWING LINKS:
Canada Callbook at MIT
U.K. Callbook

Finland (OH) Callbook
Guernsey (GU) Callbook
Taiwan (BV) Callbook
Several USA Servers including QRZ

Here probably is the definitive source if it is "The International Foriegn call book" (The Flying Horse that is) on CD ROM:
A quote from WWW

"Order the 1996 Radio Amateur Callbooks and the hot new 1996 SUMMER Edition Radio Amateur Callbook CD- ROM from KC3NE -- and save big!
Callbook CD-ROM Price List - Retail $49.95
United States - $34.70 each, includes first class mail.
DX - $39.70 each, includes airmail. End quote

This is at URL:
http://www.everett.net/users/logplus/kc3ne.htm
I have not found the Flying Horse Callbook as a server on WWW (not surprising)

I have heard (rumor rumor) that certain countries sell their Amateur Radio Lists to but one publisher -- hence only one callbook I know of that "covers em all" (outside USA).

For photos of the worlds greatest/best amateur radio contest operators, CW and SSB, go to the following web pages. Taken this weekend at the WRTC event around San Francisco. These are posted via CQ Mags web site, and were at events sponsored by Shell Oil and Icom:

www.access.digex.net/~cqmag/shell.htm

www.access.digex.net/~cqmag/icom.htm

Defending operating champions are shown along with those aspiring to reach the top.

Guess what, they look just as you or I from where ever in the world! Young, old, multi-ethnic and multi-cultural--exactly what the amateur radio hobby is world wide. Our hobby is NOT going down hill!!

Enjoy and 73, Jim, AH6NB

Wonder what the power supply in the CB set will think when
it is asked to operate that 4X1000? Going to take more
than a simple mod, but hey, a lot of technically
qualified people are not licensed radio amateurs,
lets hope they ARE ethical.

Hi Steve,

Well it is obvious which ones you won't be using.

Anyway, Q signals used on SSB are just part of the
nostalgia of amateur radio, sort of what CW is
also coming to.; unless you heard 40 CW last night
during the last hour of the IARU World Team Sport
Championships. What a bunch of excellent QRQ CW
ops!! I had a super time, but next time will be
using a programmed keyer. Got pretty excited at times,
the result was some pretty inaccurate keying!!

From what I could hear, there are hundreds/maybe
thousands of CW enthusiastic nostalgia buffs about
the globe; least sounded that way from our here
in Hawaii all day long Saturday on the 20 meter
CW band segment.

At a hamfest the other day, I gave Harold a call on 2m ending with, "Hey Harold, gotcha ears on?". A fellow ham heard me and lectured me for a few minutes on operating procedure. Then he asked, "Just how long have you had your license?" I replied, "44 years". :-)

We are in the avocation of communications. Saying "my QTH" conveys the same meaning as "my house" so why not use it? And "QRZ" sounds a lot more high class than "Who Dat?".

While this sounds like a great way to learn code to pass the test,
how would it work in a QSO? IOW, if I learned to copy code this way,
would I be able to carry on a QSO without writing or typing what I'd
heard, then going back and reading what I had typed/written?

I reply:

It may not be applicable, but I have a Yaesu FT-900 installed in my
1996 Ford Explorer. The only ill effect that I experience while
transmitting either SSB or 10 meter FM is that the turn
signal flasher rate speeds up to about double the normal
speed. No ill effects on the air conditioner or engine
computers. I use the ham rig on 75, 40, and 10 meters.

5433. IOTA-Contest: EU009 (and WAB HY21)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-15 00:00:00 UTC
From: Michael Hoeding <hoeding@iti.cs.uni-magdeburg.de>
Message-ID: <31E9E435.787A@iti.cs.uni-magdeburg.de>
Source record: 221006

Hi folks,

Abstract:
Call: GM/DL6MHW
QTH: Orkney Islands, Lindisfarne near Stromness
IOTA: EU 009
WAB: HY21
Mode: only SSB
QRGs: 28455, 21.255, 14.155, 7.055, 3.755 (+/- QRM)

I will operate from the Orkney Islands (EU 009) during the upcoming
IOTA-Contest as single Op. The QTH near Stromness (Mainland) offers an
excellent path to north america and good path to Britain and Europe.
During the day time I will try to call the last 3 minutes of every hour
on 28.455 to avoid the missing of any 10m opening and to support the
difficult 10m multiplier EU 009 for you.

Some WARC and CW operations are planned before and after the contest.

Clive (GM3POI) reported the the QTH is located in the very rare
activated WAB-Square HY21. He will also be active during the
IOTA-Contest to bring EU 009 in the air in CW.

Every contact in the contest will be confirmed automatically via bureau.
If you need a direct QSL please send your SASE via DL3ABL, Andrea
Diekmann, Bruno-Taut-Ring 56, 39130 Magdeburg, Germany.

Please give me a call (or more) in the IOTA-Contest !

73 de Michael - DL6MHW

Hi Cecil,

Thanks for the reply. I said something to the effect 'not
good form' because I do not think it is poor operation, only
unnecessary. I can think of only two instances where it
accomplishes anything. You mentioned one, QRZ. The second is
QSL to acknowledge receipt of a message in a phone traffic net.
Both of these accomplist the desired result most directly and
easily. On the other hand 'what is your home QTH' is absurd.

Congratulations on getting your old call back.

Peace and 73,
Pat, K5ETX

5436. EZ-Clone programming software: Opinions?

Newsgroup: rec.radio.amateur.misc

I just checked out the EZ clone web site, http://www.acsys.com and was interested in their product for programming my Yaesu ft50r. The feature that looked interesting is that the interface connects to the internet allowing users to download frequecy file lists from around the country. I am wondering if anybody out there has used their software and would like to hear experiences. The site says it is beta testing, so I would like to hear about "bugs" if anybody has experienced them.

What they teach at the Intelligence Center and School at Ft. Hauchuca
is Morse Intercept. This used to track Third World military organizations
who still use CW as a primary means of commo. The MOS is interesting.
How would you like to get paid to copy high speed Morse all day?

5441. Need FM-6 help

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-15 00:00:00 UTC
From: cdbell@ix.netcom.com
Message-ID: <4sehls$mtm@dfw-ixnews3.ix.netcom.com>
Source record: 221014
Cross-posted to:
alt.radio.pirate,rec.radio.amateur.homegrown,rec.radio.amateur.misc,rec.radio.amateur.equipment,alt.ham-radio.vhf-uhf

I am experimenting with a Ramsey FM-6 to be placed on a bicycle racer for an ultra-marathon event. This, I hope, will allow the rider to communicate his needs to a crew which will be closely following him in a pace van.

The problem, however, is that the FM-6 was designed to be a "bug". That is to say that it collects all ambient sounds and transmits them at the same levels. This makes monitoring the frequency exceedingly difficult. Road, wind and many other sounds must be sifted through to hear what the rider might be saying. This is places an unacceptable burden on the crew. We have attempted to put a good sock on the mic, but that did not help at all.

So here's the question: Does anyone know of a (simple) way to filter the FM-6 so that only the voice range (300 to 3000Hz) will be heard?

If you think that this could be solved, please e-mail me.

Thanks,

Charlie

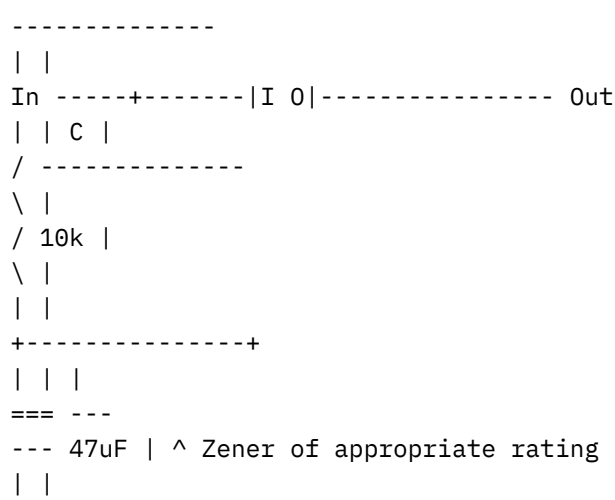
>voltage by 1.8 volts (0.6 volts per diode drop).

There's a gotcha related to this :

I once needed a 24V 2A supply for a tape streamer. Now, the local electronics shop only stocked the 78Sxx's up to the 78S15 (15V), so I decided to use that and put a 9.1V zener between the common pin of the regulator and ground, with a 10k (or thereabouts) resistor from the input to the top of the zener to ensure the zener was passing a sensible current.

It worked fine off-load, but when I powered it up with the streamer connected, the output was very low. Experimentation proved that connecting it to the streamer after powerup was OK, as was shorting out the zener and powering it up with the streamer connected. In the latter case, the regulator gave out 15V, of course, and upon removing the short across the zener, the output rose to 24V and stayed there.

I finally discovered that the switch-on current of the streamer was enough to cause the output pin of the regulator to be below 9V for a significant time after power-up. Thus, the output was more negative than the common pin, which caused the 78S15 to go into shutdown mode. I finally cured it by connecting a capacitor of a few 10's of uF across the zener to give a 'soft start'. It now works fine...



```
| |
Gnd-----+---------------+----------------- Gnd
```

>Note that the regulator will have to drop 10.2 volts to get from
>24 to 13.8 volts. At 1.5 amps, that's about 16 watts. Heatsink it
>very well. A TO-3 cased regulator might be a better choice (again
>use a mounting kit, you can't ground the case). The added diodes
>need to be rated for the current as well.

If you're using diodes or zeners to 'jack up' a regulator, they only carry the (low) current needed by the regulator itself, not the load current. They don't need to be highly rated.

Ah, another person comparing ham radio to the military's billion dollar comm system. I bet your HT is painted camo green!

>What Hams would have
>to do is ban AM (SSB), and FM, and use SS (probably FH) as the only
>modulation method.

Why? Our day-to-day activities involve having fun, not passing message traffic directing troop movements and logistics.

>It won't work if Hams are using 1930's technology
>and 1990's technology. The ARS needs to be forced to modernize.

Why? Don't pretend the security of the nation depends upon the mode we use. Your QSOs are probably as routine as anyone else's.

>We have waited long enough for the ARRL to lead this modernization, now
>it's time for capitalism to direct the needed political change.

The ARRL has always published up-to-date circuits in QST and The Handbook; whether folks decide to build radios utilizing these modes is up to each individual licensee. What modern rig have *you* built lately, Steve?

so come rain or shine or super heat the Flea is on !!!

********* $1 buyers discount with hardcopy of this notice ********

COMPUTERS - ELECTRONICS - HAM RADIO - COMPUTERS - ELECTRONICS - HAM RADIO

FLEA all SUMMER at MIT
July 21st, 1996
9AM-2PM

Come to the city for a great flea - plenty of free parking.

MIT's electronics and ham radio flea will take
place on the third Sunday of each month this summer,
April thru October.

There is tailgate space for over 600 sellers and
free, off-street parking for >1000 cars!

Buyers admission is $4 (you get $1 off if
you're lucky enough to have a copy of our ad)
and sellers spaces are $10.00-each at the gate.

The flea will be held at the corner of Albany and
Main streets in Cambridge; right in the Kendall
Square area from 9AM to 2PM, with sellers set-up
time starting at 7AM.

!! RAIN or SHINE !! Have no fear of rain, a covered
well illuminated tailgate area is available for all
sellers (6'8" clearance).

Talk-in: 146.52 and W1XM/R-449.725/444.725 (PL 114.8/2A).

Years ago (> 10+ years?) I read that it is quite possible to get
transient spikes up to 80-90 V. Modern vehicular electrical
system might do better. However, if you know that in some aspects
the specifications for vehicular electronics system is more
stringent that Mil Spec, you might get worried. Any one with some
facts to fill in?

In the July issue of our German journal "CQ-DL" a similar
listing was mentioned. They give two reasons for the large
number of Japanese licenses:
- Each issued Japanese callsign has permanent validity; even if
its holder upgrades, he or she keeps the old one AND gets a
new one.
- There is also no CB like in North America or Europe, so this
area of communication is covered by the lowest license class
(this is also said to be true for Indonesia).
Besides, not every station may wish to appear in the callbook,
for instance those who are only interested in local communications.

I spoke to an individual who interviewed most or all of the army personnel who operated CW. To a man, each of them held an Amateur Extra Class license. Several attributed the successful defense of Earth to the extra edge that the additional 7 WPM afforded them (over the mere 13 WPM requirement for general/advanced).

Forget that. You are fighting the last war. Interstellar and interplanetary DX are where it is at. There is no thrill like working Venus at the sunspot minimum (when the RF doesn't reflect back to Earth, as it does during the peaks of the cycles). I've got Venus, Mercury, and Jupiter confirmed. No luck with Neptune or Mars yet, worse luck.

Scott, let me add my congratulations on passing your exam. I remember the thrill of getting mine about 30 years ago. Took quite a bit longer to get the ticket then, and one did have to wait for the paper copy before beginning to operate.

Two of the best things that have come along in those years, is the FCC dropping the requirement that one have a license in hand to begin operating, and access to the FCC callsign database.

73, welcome to the fraternity of hams, and ENJOY!

You can use your callsign/priviledges in any U.S. state or territory (Puerto Rico, Guam, Johnston Island, etc.). You can use it in the U.S. Virgin Islands; in the British Virgin Islands you can't operate unless you're a general class operator with an easy-to-get permit.

Yes, good 'ol morse code comes through again. I just wish they had better looking fists than was shown. Nobody could send decent sounding code the way they were pounding the keys.

I think the way that little laptop pc interfaced with the alien craft also was a statement about some of the follies of client server computing. You would think their networks were a little more resistant to outside addressing. BTW, what domain were they in? ugly_alien.inv? (invader)

Makes me think in a backhanded way they have some of the same stupid problems we have on this planet. If one offending virus can take down an entire network of invaders, it sounds just like when a single short on a power line wipes out a couple of million people in several western states.

I know, it's just a movie, but just the same, it shows how stupidity crosses all boundries of race, color, creed or planetary origin.

This message describes the rec.radio.amateur.*, rec.radio.cb,
rec.radio.info, and rec.radio.swap newsgroups, as well as their Internet
mailing list counterparts and complements. It is intended to serve as a
guide for the new reader on what to find where. Questions and comments may
be directed to the author, Jay Maynard, K5ZC, by Internet electronic mail at
jmaynard@admin5.hsc.uth.tmc.edu. This message was last changed on 31 October
1994 to add the discussion of non-Usenet mailing lists and streamline most
of the history discussion, and to change the moderator information for
rec.radio.info.

History
=======

Way back when, before there was a Usenet, the Internet hosted a mailing list
for hams, called (appropriately enough) INFO-HAMS. Ham radio discussions
were held on the mailing list, and sent to the mailboxes of those who had
signed up for it. When the Usenet software was created, and net news as we
now know it was developed, a newsgroup was created for hams: net.ham-radio.
The mailing list and the newsgroup were gatewayed together, eventually.

Over the years, as the net grew, the volume of discussion became
progressively higher. First one by one, and then as part of two
reorganizations, what was once one group became many. In the process,
developments elsewhere on the net were reflected in the groups as they were
created, most notably the change to place all of the ham radio groups in one
hierarchy.

The collection of newsgroups continues to grow as more people join the net,
and as more topics of discussion gain volume, I expect to see more groups be
created as well. This follows what is happening on the rest of the net.

Nearly all of the radio newsgroups have corresponding mailing lists, the
notable exception being rec.radio.swap. There are also a few mailing lists
that don't have newsgroups.

The Current Groups
==================

It's important to post messages to the group that's appropriate for them,
and not to the groups that aren't. The whole idea of having different
```

newsgroups is so that folks who aren't interested in, say, homebrewing, don't have to wade through messages about homebrewing on the way to read about Field Day. Posting appropriately is just good etiquette.

The rec.radio.amateur.misc group is the catchall. It is what rec.ham-radio was renamed to during the first major reorganization. Any message that's not more appropriate in one of the other groups belongs here, from contesting to DX to ragchewing on VHF to information on becoming a ham.

The group rec.radio.amateur.digital.misc is for discussions related to (surprise!) digital amateur radio. This doesn't have to be the common two-meter AX.25 variety of packet radio, either; some of the most knowledgeable folks in radio digital communications can be found here, and anything in the general area is welcome. The name was changed to emphasize this, and to encourage discussion not only of other text-based digital modes, such as AMTOR, RTTY, and Clover, but things like digital voice and video as well. The former group, rec.radio.amateur.packet, was removed on September 21st, 1993. It is obsolete, and you should use .digital.misc instead (or the appropriate new mailing list, mentioned below). The group has .misc as part of the name to allow further specialization if the users wish it, such as .digital.tcp-ip.

The swap group is rec.radio.swap. This recognizes a fact that became evident shortly after the original group was formed: Hams don't just swap ham radio gear, and other folks besides hams swap ham equipment. If you have radio equipment, or test gear, or computer stuff that hams would be interested in, here's the place. Equipment wanted postings belong here too. Discussions about the equipment generally don't; if you wish to discuss a particular posting with the buyer, email is a much better way to do it, and the other groups, especially .equipment and .homebrew, are the place for public discussions. There is now a regular posting with information on how to go about buying and selling items in rec.radio.swap; please refer to it before you post there. To answer a frequently asked question: No, there is no mailing list that goes along with this group. If you can't read Usenet news directly, you're out of luck.

The group rec.radio.amateur.policy was created as a place for all the discussions that seem to drag on interminably about the many rules, regulations, legalities, and policies that surround amateur radio, both existing and proposed. Recent changes to the Amateur Radio Rules (FCC Part 97) have finally laid to rest the Great Usenet Pizza Autopatch Debate - it's now legal to order a pizza on the autopatch, if you're not in the pizza business - as well as complaints about now-preempted local scanner laws hostile to amateurs, but plenty of discussion about what a bunch of rotten no-goodniks the local frequency coordinating body is, as well as the neverending no-code debate, may still be found here.

The group rec.radio.cb is the place for all discussion about the Citizens' Band radio service. Such discussions have been very inflammatory in rec.ham-radio in the past; please do not cross-post to both rec.radio.cb and rec.radio.amateur.* unless the topic is genuinely of interest to both hams and CBers - and very few topics are.

The rec.radio.info group is just what its name implies: it's the place where informational messages from across rec.radio.* may be found, regardless of where else they're posted. As of this writing, information posted to the group includes Cary Oler's daily solar progagation bulletins, ARRL bulletins, the Frequently Asked Questions files for the various groups, and radio modification instructions. This group is moderated, so you cannot post to it directly; if you try, even if your message is crossposted to one of the other groups, your message will be mailed to the moderator, who is currently David Dodell, WB7TPY. The email address for submissions to the group is rec-radio-info@stat.com. Inquires and other administrivia should be directed to rec-radio-info-request@stat.com. For more information about rec.radio.info, consult the introduction and posting guidelines that are regularly posted to that newsgroup.

The groups rec.radio.amateur.antenna, .equipment, .homebrew, and .space are for more specialized areas of ham radio: discussions about antennas, commercially-made equipment, homebrewing, and amateur radio space operations. The .equipment group is not the place for buying or selling equipment; that's what rec.radio.swap is for. Similarly, the .space group is specifically about amateur radio in space, such as the OSCAR program and SAREX, the Shuttle Amateur Radio EXperiment; other groups cover other aspects of satellites and space. Homebrewing isn't about making your own alcoholic beverages at home (that's rec.crafts.brewing), but rather construction of radio and electronic equipment by the amateur experimenter.

Except for rec.radio.swap and rec.radio.cb, all of these newsgroups are available by Internet electronic mail in digest format; send a mail message containing "help" on a line by itself to listserv@ucsd.edu for instructions on how to use the mail server.

All of the groups can be posted to by electronic mail, though, by using a gateway at the University of Texas at Austin. To post a message this way, change the name of the group you wish to post to by replacing all of the '.'s with '-'s - for example, rec.radio.swap becomes rec-radio-swap - and send to that name@cs.utexas.edu (rec-radio-swap@cs.utexas.edu, for example). You may crosspost by including multiple addresses as Cc: entries (but see below). This gateway's continued availability is at the pleasure of the admins at UT-Austin, and is subject to going away at any time - and especially if forgeries and other net.abuses become a problem. You have been warned.

Mailing Lists

In addition to the mailing lists that mirror the Usenet newsgroups, there also are a few that stand alone. These cover specific areas of ham radio, and discussion is focused on just those areas.

The cq-contest mailing list is for discussions of contesting in ham radio. To join, send email with the word "subscribe" on a line by itself to cq-contest-request@tgv.com.

The DX mailing list covers the finer points of DXing. This one is also joined by mailing "subscribe" on a line by itself, this time to

dx-request@unbc.edu.

There's also a VHF mailing list, for VHF operators of the weak signal persuasion. You can join this one be sending "subscribe vhf" on a line by itself to vhf-request@w6yx.stanford.edu.

All of the following mailing lists are sponsored to the Boston Amateur Radio Club, as well as some others of local interest. Thanks to N1IST for the information.

qrp-l: This is the qrp mailing list, previously maintained by Bruce Walker at Think.com. It is for discussions about the design, construction, and use of qrp (low power) radios and related equipment.
arrl-ve-list: This is a one-way list, run by Bart Jahnke of the ARRL VEC, for announcements to VEs and VE teams.
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
fox-list: Fox hunting and Radio Direction Finding
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio
arrl-exam-list: amateur radio license examinations scheduled in the US and in some foreign areas.

To sign up or inquire about these lists, send mail to listserv@netcom.com with the following in the body (subject is ignored) of the message.
<listname> is the name of the list to subscribe to.
To subscribe: subscribe <listname>
To unsubscribe: unsubscribe <listname>
For more information: help
To post (to the two-way lists), send your message to <listname>@netcom.com

Please do NOT send subscription requests to the mailing lists themselves; that doesn't work very often, and is very annoying to those on the list. Also, please keep your electronic mail address current with any mailing lists you subscribe to, as dealing with returned email is a nuisance for the person maintaining the mailing list.

A Few Words on Crossposting
==========

Please do not crosspost messages to two or more groups unless there is genuine interest in both groups in the topic being discussed, and when you do, please include a header line of the form "Followup-To: group.name" in your article's headers (before the first blank line). This will cause followups to your article to go to the group listed in the Followup-To: line. If you wish to have replies to go to you by email, rather than be posted, use the word "poster" instead of the name of a group. Such a line appears in the headers of this article.

One of the few examples of productive cross-posting is with the rec.radio.info newsgroup. To provide a filtered presentation of information articles, while

still maintaining visibility in their home newsgroups, the moderator strongly encourages cross-posting. All information articles should be submitted to the rec.radio.info moderator so that he may simultaneously cross-post your information to the appropriate newsgroups. Most newsreaders will only present the article once, and network bandwidth is conserved since only one article is propagated. If you make regular informational postings, and have made arrangements with the moderator to post directly to the group, please cross-post as appropriate.

>It has to be a certified resistor replacement part from the radio
>manufacturer, costing about 100 times as much and taking a long time to
>get to you.
>Neither the FCC nor the FAA will acknowledge the others existance, by the way.

Lord knows I'm a good repubican and perfer much less government. (I'm feeling that way even more today, being July 15, and the end of the quarter when I have to pay taxes on my company...)

But an airplane radio is a little different in my mind.... If I get in an airplane, I kinda hope that the radio wasn't repaired with a 1/2 carbon resistor from somebody's junk box....

I'd gladly pay a $5 resistor replacement charge on my airline ticket.. :)

Thanks for your support, Larry. In general, hams are a friendly bunch, and enjoy helping, or just conversing, with anyone who is interested in radio. You will find negativity and dissent in the rec.radio.amateur.* hierarchy, but that's just a mirror of real life.

Sad to say, but a non-ham would be more welcome than a ham with a no-code license, to some on these newsgroups.

Regards,

Jim

A dead or dying mailing list is not a healthy sign that a newsgroup is needed. One of the better ways to justify a newsgroup in the so-called "Big 8" is to cite a high-traffic mailing list of the same topic.

Good luck in your venture, though.

Hello,
Here is a simple question. I have a kpc3 connected to my pc and it is on com3 irq5 (I know, strange configuration). I want to communicate with the tnc via the terminal program in windows. Windows allows me to select com3, but it won't let me change the default irq from 4 to 5.

Does anyone know how to switch the interrupt from 4 to 5? Can I use edit to change something in WIN.INI or SYS.INI. I peered into those files, but didn't see the irq's defined.

TNX and 73 from KD3SH

I suppose a ham would take notice - especially since voice is *not* a
permitted mode on 30 meters.

Someone must have had a sense of humor. QLF is a pseudo-Q-signal for "try
sending with your left foot." :-)

Yes, there is. It is called "UKW-Tagung" and takes place in Weinheim from September 20. to 22. The program consists of invited talks about ham-related topics (probably, they're all in German, sri), a large flea market and commercial exehibitions. I don't know the exact distances, but Weinheim is only a few hours from Wuerzburg. Maybe we meet there...

> Here are my impressions of the radio.
>

Bob,

I, too, am a former FT-530 owner who now has an FT-51. I agree with all the points you made except one (I like volume knobs!). Also, there *is* plenty of receive audio but I wish the quality was better -- needs some lows put back in. Overall, the '51 is a fine radio.

At a recent hamfest, I bought an FT-50. After playing with it for about 45 minutes, I took it back to dealer I bought from and paid the difference to get the '51. After hearing about the various problems people are having with the 50, I know I made the correct decision.

As far as your inability to find the backup battery in the '51 -- it doesn't have one. An E2PROM (Electrically Eraseable Programmable Read Only Memory) is used instead -- no battery to go dead!

73, Jim, KC5OA

5480. GB2RS News 14th July 1996

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-15 00:00:00 UTC
From: David Hough <dave@llondel.demon.co.uk>
Message-ID: <837479056snx@llondel.demon.co.uk>
Source record: 221076
Cross-posted to: uk.radio.amateur,rec.radio.info,rec.radio.amateur.misc

Good morning. It's Sunday the 14th of July and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

The RA has announced the launch of the Harmonized Amateur Radio Examination Certificate, or 'HAREC'. In a press release dated the 4th of July, the RA explained that the HAREC can be used to obtain a full overseas amateur radio licence by anyone travelling abroad for more than three months. The certificate, which is available on request from the RA, is accepted in those countries which have implemented the appropriate CEPT Recommendation. At present these are: Bulgaria, Croatia, the Czech Republic, Denmark, Finland, Germany, Hungary, Ireland, Latvia, Liechtenstein, the Netherlands, Norway, Portugal, Romania, Poland, Sweden, Switzerland and Turkey.

HAREC will make obtaining an overseas amateur radio licence a simpler process. Licences issued under the scheme will be renewable, and the class of licence will be dependent on the class of certificate presented to the relevant authority: Class B HARECs will be issued to those who have passed the RAE and Class A HARECs will be issued to anyone to has passed the RAE and RSGB 12 words per minute Morse code test.

Anyone who currently holds, or who has ever held, a full UK licence will be eligible to apply, whatever their original qualifications. Applications should be accompanied by either a current UK licence, or proof of passing the RAE and, where appropriate, the 12 words per minute Morse test.

For travel of up to three months duration, CEPT Recommendation T/R 61-01 still applies.

It should now be possible to hear experimental amateur stations on the new 73kHz band as some of the Notices of Variation have been issued by the RA. The August issue of RadCom, which is due to be posted to RSGB members this coming week, contains a number of features and articles on this new LF band.

We have some good news regarding the Trafficmate system which operates on 433.92MHz. Over the last nine months, the RSGB has discussed the subject with the Radiocommunications Agency on several occasions. We are now pleased to report the following statement from the RA:
'Trafficmaster are operating the Trafficmate system on 433.92MHz at present and the system is required to comply with the spectrum management parameters of MPT 1340. This is a temporary frequency allocation and an alternative frequency has now been found for the

Trafficmaster network. All Trafficmaster transmitters and receivers will be required to operate on the new alternative frequency after the 31st of December 1998.'

The full GB2RS scripts, including the regional news bulletins, are now available on the RSGB Headquarters Home Pages on the Internet. The address is http://www.rsgb.org.uk/

The RSGB will be holding amateur radio car boot sales at its headquarters at Potters Bar on the third Saturday of each month, starting this Saturday, the 20th of July. The car boot sales, which run from 10.00am to 4.00pm, will be held for an experimental period of four months, on the 20th of July, 17th of August, 21st of September and 19th of October. They coincide with the usual Saturday opening of the HQ building, when the bookshop and GB3RS shack are available to visitors, as well as the National Amateur Radio Museum and Library. Morse tests are available on demand between 11.00 am and 12.30 pm, but don't forget to bring two passport-size photographs and the appropriate fee with you. For further details contact Marcia Brimson, 2E1DAY, at RSGB HQ, telephone 01707 659015.

The 1996 AMSAT-UK Colloquium takes place between the 25th and 28th of July at the University of Surrey in Guildford. Admission is by ticket only, so for further details and a booking form, please send a large SASE, without delay, to Ron Broadbent MBE, G3AAJ, whose address is correct in the RSGB Call Book.

The RSGB is carrying out an Opinion Survey on the Future of Amateur Radio which is open to anyone, whether or not they are a member of the RSGB. If you would like to receive a survey form, write to 'Survey Request', RSGB Headquarters, Lambda House, Cranborne Road, Potters Bar, Hertfordshire, EN6 3JE, enclosing a large self-addressed stamped envelope. Please note that the completed forms must be returned by the 29th of July.

Radio Amateur Relief Expeditions - R.A.R.E. - are holding a summer school for Romanian young people to teach amateur radio, art, and conversational English. They are using special event station callsign YR0OR until about Friday the 19th of July. From the 21st to the 25th of July the team will be in the Slovak Republic in order to introduce amateur radio to disabled young people. For more information on R.A.R.E. write to Don Sunderland, G6FHM, whose address is correct in the RSGB Call Book.

Now some six metre news: YU1VG will be operating from rare locator square JN91 from tomorrow, the 15th of July, until the 28th of this month on 6 metres and 2 metres. Thanks to John Ridd, G8BQX, for sending in this story.

The Port Talbot Amateur Radio Society is celebrating its 50th anniversary in September. Any former member who would be interested in joining in with celebratory events is invited to contact the society's

secretary before the end of this month. He is Ted James, GW0NKF, whose address is correct in the RSGB Call Book.

Newcastle Under Lyme Scouts Amateur Radio Communications Group is planning a special event station at the International Friendship Camp at Kibblestone in Staffordshire from the 20th of July until the 3rd of August. The international camp is expected to attract several thousand Scouts from all over the world and this is an excellent opportunity to let them experience amateur radio. A rota of operators is required, so if you can help please contact Roger Bloor, G7RSM, during the evening on 01630 672718.

Now some items of HF DX news from the weekly RSGB Dx News Sheet, edited by Chris Page, G4BUE:

From the Mariana Islands, two Japanese operators will be active as KH0N and KH0/JA6IP from the 14th until the 17th of July on CW and SSB on all bands from 80 to 6 metres.

From Cyprus, DL5MX will sign 5B4/DL5MX from Thursday the 18th of July until the 1st of August, including an entry in the RSGB IOTA Contest on the 27th and 28th of July.

And from Ascension Island, Jim, N6TJ, is active as ZD8Z from now until Wednesday the 17th of July, including an entry in the IARU HF Championship contest this weekend.

Now news of some special event stations:

GB4ATC is on the air from the Air Training Corps' stand at the Royal Tournament at Earl's Court in London from now until the 20th of July. The station is active on HF, 2 metres and 70 centimetres.

Barking Radio and Electronics Society is operating GB2DTS from the Dagenham Town Show this weekend, the 13th and 14th of July. On display will be HF and VHF demonstration stations, packet radio, satellite TV and weather satellite reception. All are welcome to visit the site at Central Park, Dagenham, adjacent to the Civic Centre.

GB8TVR is on the air today, Sunday the 14th, on 2 metres from the 'TVR Mania 96' car club exhibition at the National Watersports Centre, Holme Pierrepont, in Nottinghamshire. Look for the station on 144.33 MHz SSB and 145.55 MHz FM between 10.00am and 5.00pm.

The Royal Signals Amateur Radio Society is activating GB4AFS from 244 Squadron, 21 Signal Regiment, at Azimghur Barracks, Colerne, near Chippenham in Wiltshire from Tuesday the 16th until the 20th of July.

Next the Rally News:

The Sussex Amateur Radio and Computer Fair takes place at Brighton Racecourse today, Sunday the 14th.

Next Sunday, the 21st of July, the Colchester Radio and Computer Rally will take place at St Helena School, Sheepen Road, Colchester. The event features traders, a bring and buy stall and RSGB Morse code tests on demand. Doors open at 10.00am and for more details contact Richard, G7BIV, on 01376 571239.

The Humber Bridge Radio and Computer Rally takes place next Sunday, the 21st, at a new venue - the Costello Sports Stadium, Boothferry Road in Hull. Doors open at 10.30am and talk-in will be on 2 metres channel S22. For details, ring 01482 837042.

And the McMichael Rally also takes place on Sunday the 21st, at the Haymill Youth and Community Centre, Burnham Lane, in Slough. The event features a car boot sale and doors open at 10.00am. For further details, call 01628 486554.

Repeater news next:

The keeper of the 2 metre Orkney repeater, GB3OC, sends his apologies for the lengthy period the repeater has been off the air. GB3OC operates on channel R2, but has been off the air since the 9th of May.

The 70 centimetre Borders area repeater, GB3HK, has been off the air since February 1995. It should now be back in service on channel RB2. The keeper is GM0FTJ.

Now for the contest news:

The IARU HF Championship is taking place this weekend, and finishes at 1200UTC today, the 14th. The contest is on CW and SSB and covers all bands from 1.8 to 28MHz, excluding the three WARC bands.

And the RSGB's Low Power Field Day contest takes place over two sessions, from 09 to 1200 and 13 to 1600 UTC, today, the 14th. Full rules are in the September 1995 RadCom.

Next weekend, the 20th and 21st, there are two CW contests - the SEANET contest and the AGCW QRP Summer Contest. Brief rules were published in the July RadCom.

And on VHF, the 2nd RSGB 50MHz Backpackers contest is taking place today, the 14th of July, from 11 to 1500 UTC. The rules are in the September 1995 RadCom.

The RSGB 144MHz Low Power Contest takes place on Saturday the 20th of July, followed next Sunday, the 21st, by the 432MHz Low Power contest. The rules for both of these contests are in the RSGB Contesting Guide supplement, which was published in the September 1995 RadCom.

And now the solar factual data for the period from the 1st to the 7th of July compiled by Neil Clarke, G0CAS:

Solar flux levels increased to 72 units on the 7th, with the emergence of a new sunspot region which also produced several small B class sub-flares. Solar flux averaged 70 units, and the 90-day solar flux

average on the 7th was 69 units. Also on the 7th, the X-Ray flux levels increased to A1.8 units. The average was A1.2. Geomagnetic activity was mostly 'quiet' but increased to 'unsettled' levels from the 3rd to the 5th and averaged Ap 9 units. For the period from the 24th to the 30th, the solar wind was at normal velocities of 360 kilometres per second, and particle densities at around 10 particles per cubic centimetre. The Bz was south on the 29th and north on the 30th, with the remaining days hovering around zero nanoTeslas.

Now the ionospheric data for Central France for the period from the 28th of June to the 4th of July. The F2 daytime highs averaged 6.4MHz and darkness hour lows averaged 3.3MHz. The daytime highs took place between 1800 and 2200 hours every day, with the darkness hour lows between 0100 and 0500 hours. 16 hours of blanketing E was recorded at Poitiers with 10 hours on the 1st and the 2nd. On the 1st, Don Kirby, GW0PLP, in Cardigan worked numerous European stations on 50MHz sporadic E. Later the same day he worked V47KV on St Kitts and Nevis in FK87 square.

And lastly the solar forecast. The quiet side of the sun is expected to be rotating away with the slightly more active side of the sun coming into view. Solar activity is expected to be very low, as 'near solar cycle minimum' conditions prevail. Solar flux levels could increase slightly to around 70 units by next weekend. Geomagnetic activity is expected to continue at 'quiet to unsettled' levels. Ionospheric MUFs during daylight hours are expected to be about 18MHz for the south and 15MHz for the north, but these levels could be exceeded slightly during the early evening period. The darkness hour lows are expected to be about 11MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the M0 Alfa Golf and M1 Alfa Delta series, and Novice calls in the 2 0 Alfa Oscar and 2 1 Foxtrot Bravo series.

>Yes I would vote that 15 volts is a bit high for your radio.

Hi!

I ran some tests this afternoon with my DMM. I connected the DMM
to a lighter plug and then drove around and watched the voltage.

Here's what I saw:

Started out at 12.8v before starting the car

Started the car, and it jumped to 14.8 for several seconds then
settled down to 14.6 for about 2 minutes.

As I drove over the next 10 minutes, it slowly creeped down
to 14.2 where it stayed. (at least until I quit watching
the meter and started watching the road!)

FWIW, the car is a 92 Explorer.

I'm delighted that the RFD for r.r.a.boatanchors has begun. Boatanchoring (and the description of the name given in the RFD is as good as any) is one of the most active and congenial activities in amateur radio, and the equipment involved evokes a dedication and loyalty far beyond any that today's newest and greatest gear is ever likely to earn.

For those who haven't followed the discussion very closely I'd like to note that the administrator of the Boatanchors mailing list has publically announced his support of a boatanchors newsgroup. I hope all my fellow hams will also support the proposal, and when the deed is done will come by and get a taste of one of the most enjoyable aspects of amateur radio.

5496. Yeasu FT51 Impressions

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-15 00:00:00 UTC
From: levine@mc.com
Message-ID: <4sdkla$he9@newsy.mc.com>
Source record: 221092

I recently acquired a Yeasu FT51R dual band HT and sold my FT530.
Here are my impressions of the radio.

The programming "philosphy" is very similar to the 530 so it was easy
to get going with. The speaker mic (mic and headphone jack) are the
same so your current speaker mic and packet radio cables dont have to
change.

Improvements over the 530:
==========
1) Alphanumerics on the display for station ID (or whatever you want)
User programmable alphanumerics for the autodial memories also.
2) I personally like having the volume control by the buttons on the
display rather than turning a knob on top. Less likely to change
while hanging on the belt. This is purely a personal preference.
3) Smaller size, fits in a pocket better.
4) Easier to use, less "button functionality". The 530 has about 4
functions per button and is impossible to remember. The 51R has
user-help messages to improve this and a "set" mode where many of
the operating parameters are set with alphanumeric assistance from
the radio.
5) Computer progammability. I suppose this is a nice feature. I decided
however NOT to buy that at this time. One of my pet peeves is all the
people who have gear they can't operate. I decided to forgo the
computer programming at least until I an very comfortable setting
freqs, tones, memories, ctcss encode/decodes, etc... by hand.
6) Cloning capability. This would be very handy if you go to Dayton
for example with a bunch of people and you all want to be set up the
same way. This is the only time I ever use stuff like dtmf paging
etc....
7) The spectrum scope (or whatever Yeasu calls it) came in very handy
while monitoring Dulles airport freqs last week looking for the tower
and ground freqs. I like it better than scanning.
8) Only 9.6v for 5W out, 4.8v for 1.5W out.
9) VERY loud audio at max volume. The 530 was piss-weak.

FT530 Features I miss:
==========
1) Clock on the display
2) Battery voltage available on the unused VFO. (the battery voltage
is available in set mode)
3) No DC input jack! This should be a standard feature so you can use
it in an emergency when your batts are gone. You need to buy an
accessory to connect the unit to a DC power source.
4) Ease of access to the backup lithium battery. I havent found yet where

it might be in the 51R.

After looking around a while, I discovered that relatively new 51Rs appear for sale in the $375-$410 range. You can get $240-$250 for a FT530, a few bucks more it you throw in some of your accessories.

Just my 2 cents worth.

BTW
Current 2x1 and 1x2 unused Extra Class callsigns are available (free) on my WWW page listed below.

The audio choke requires more iron.

Audio freqs are much lower than radio freqs and more inductance is required to furnish significant impedence (choke) to the audio. More iron (laminations are iron) increases inductance.

(From: impedence = 2 x pi x freq x inductance)

Higher capacitance is needed to bypass audio freqs than radio freqs.

At a given capacitance impedence to an alternating current DECREASES as frequency INCREASES. At a given frequency impedence to an alternating current DECREASES with INCREASING capacitance. Hence higher capacitance is needed to pass audio freqs compared to radio freqs.

(From: impedence = 1/(2 x pi x freq x capacitance)

>

There was actually a good article on this in QST Sept. 1994. It listed all the manufacturers and their contact addresses, plus information on tech bulletins on 2 way radio installation. Not all "salesmen" are up on these. Also if you are ordering instead of buying used or inventory off the lot there is some sheilding or mods that some do. These usually are done for police units and taxis for obvious reasons.

I had my radio in both Plymouth Voyagers. In the '89 I bolted it to the side of the driver's seat but found that I was looking down too much. In the '94 I bought the remote kit from Kenwood and have the body mounted to the dash near the driver's door and the control head on the overhead console where the temp and compass indicators would normally be located. I find with this even when I look up at the control head my eyes aren't really looking inside and peripheral vision still lets you see out the front.

If you want more info drop me a line.

I had [US] Navy training as a Cryptologic Tech (Radio branch), for which the *main* *emphasis* was Morse code reception. Essentially, the purpose of the CTR rating was to transcribe ("copy") Morse transmissions into the electronic systems. I had to reach 26 GPM with random-letter groups to pass the training.

That was back in 1987. The last I heard (on my last tour as a reservist on Okinawa) the "CTR" rating was going away, to be merged with the CTT rating (which did mainly HFDF and TTY stuff). All the CTRs were being put through cross-training back in 1992.

I guess not enough "enemies" were using much Morse, and the computer equipment for automatic Morse reception was becoming more common. If I remember right, Techies (CTTs) were still required to "stick" Morse to about 12 or 14 GPM to pass technical training though.

Boy, it takes me back... Some of those old Russian trawler operators had the cleanest, fastest fists you've ever heard. You could tell they were using a straight key, too! It's definitely an art.

Jeff, if you prefer more government, more often, and in your face, then
take a look at aviation radio repair. Your General Class FCC license, an FAA
Repairman Certificate, and your name registered with a licensed FAA avionics
repair station are all that are required to fix a 5 watt AM radio equivalent
to a well filtered CB but costing about 20 times as much, maybe $1200 or more.
And you can't just replace that 1/2 watt carbon resistor with another one.
It has to be a certified resistor replacement part from the radio
manufacturer, costing about 100 times as much and taking a long time to
get to you.
Neither the FCC nor the FAA will acknowledge the others existance, by the way.

The easiest satellites to hear are the Russian navigation satellites. Get a scanner and scan from 149.910-150.050 MHz in 5 KHz steps (use FM mode). A simple whip antenna will work...even indoors (these birds have strong signals).

Listen for about 45 minutes. You should hear at least one NAVSAT. The signal is a mix of a "tink...tink...tink..." every second mixed with data.

For more info, refer to my article "Monitoring Russian Navigation Satellites" in the July 1994 issue of the National Scanning Report.

says...
|
|You can raise the voltage of the common 12 volt three terminal
|regulators (7812, LM340, etc) by putting diodes in series with the
|common terminal to chassis (note that you have to use an insulated
|mounting for the tab, IE a mica washer). 3 diodes will increase the
|voltage by 1.8 volts (0.6 volts per diode drop).
|
|Note that the regulator will have to drop 10.2 volts to get from
|24 to 13.8 volts. At 1.5 amps, that's about 16 watts. Heatsink it
|very well. A TO-3 cased regulator might be a better choice (again
|use a mounting kit, you can't ground the case). The added diodes
|need to be rated for the current as well.
|
No, the current though the diodes is only 10mA or so, so any type diode
will do.

>>What class commercial ticket is necessary to do CB radio repair? (no
>>flames re: CB pls)

>Being that no license is required for CB any longer, I doubt that a
>commercial license is required to service the radios. Could be wrong.

>Dick Hughes - W6CCD

You are right, Dick, and I will elaborate a bit. Looking at the CB rules, Part 95, sub 95.424 it states:

How do I have my CB station serviced?

(a) You may adjust an antenna to your CB transmitter and make radio checks.
(b) You are responsible for the proper operation of the station at all times and are expected to provide for observations, servicing and maintenance as often as may be necessary to ensure proper operation. You must have all internal repairs and adjustments to your CB transmitter made in accordance with the Technical Regulations (see subpart E). The internal repairs or internal adjustments should be performed by or under the immediate supervision and responsibility of a person certified as technically qualified to perform transmitter maintenance and repair duties in the private land mobile services and fixed services by an organization or committee representative of users in those services.

I don't exactly know what this means, but I typed this word for word from the rules. I spoke with an FCC representative a while ago who said that he can't even explain exactly what it means, but that an amateur radio licensee who has experience with operation and maintenance of transmitters in repeater systems could fall into this category.

I sounds like there is a large "gray area" of persons who are technically qualified, but one thing that is clear is they don't want every Bozo who has used a screwdriver touching CB radios.

There you go guys! Who wants to make extra money fixing your neighbors CB radios? Peak and Clip maybe? ---Hi-Hi!!!

5514. 10 meter FM frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-16 00:00:00 UTC
From: rossi@VFL.Paramax.COM
Message-ID: <1996Jul16.195321.7205@VFL.Paramax.COM>
Source record: 220952

I am looking for some popular 10 meter FM simplex frequencies. I am familiar with 29.600 and the repeater channels at .62 .64 .66 and .68 but I can program a few more frequencies into the radio I am using and trying to find popular freqs for the few unused channel slots I have left.

10 meters has been doing pretty well lately. Seems to have been open to one degree or another just about every day during the past week or so... and some days it has been quite good.

> a foreign language).
Gary, I can understand how you feel having a learning
disability....however...I was diagnosed as having attention deficit
disorder after I had already gone from ham nothing (no knowledge) to EXTRA
in only 3 1/2 months! If you can learn to read you can learn morse
code..the keys are 1. learning the letters at 22wpm by SOUND and 2.
Listening to them everyday and saying the letter outloud as you hear it.
do this for at least 30 days AFTER you learn your last letter/number or
character depending upon what order you learn them in. If you honestly
follow this procedure you will NOT be able to stop yourself from learning
the code....if you don't believe this....just try it!

ARRL lawyer to sue member

The following is a copy of a message I received today from
ARRL General Counsel Christopher D. Imlay N3AKD:

To: James S. Kaplan, KG7FU
Copies: Mary Lou Brown, NM7N
Terry Baun
John Poray
Date: July 16, 1996
Re: Your article, SBE Chapter 124 Newsletter, July, 1996
****

Jim, I have just finished reading your article in the July,
1996 Water Cooled Newsletter, page 6. In it, you argue that two of
my clients, the American Radio Relay League, Inc. and the Society
of Broadcast Engineers, Inc. should cooperate in certain government
relations projects, specifically spectrum protection. You note that
I serve as the General Counsel for both organizations. You then
jump from that argument to the following, which I quote:

If Mr. Imlay can't resolve HIS OWN conflicts of interest,
perhaps both ARRL and SBE should be seeking more
effective counsel. No offense Chris, but we have work to
do. We should not only be sending a message to the FCC
and Congress, but to other radio industries.

(emphasis in original)

It is not useful for me to educate you on the subject of your
article to correct the errors in it, and I do not intend to do so.
What I do intend, however, is for you to print a retraction, in
unambiguous terms, in a form acceptable to me, and to furnish to
me, in writing, an assurance that such will be printed in the next
Chapter Newsletter for Chapter 124. Failing that, I am going to sue
you in the District of Columbia for libel.

I have no intention of allowing you to falsely allege that I
have a conflict of interest in representing two of my best clients,
especially in an SBE publication. You are not entitled to damage my
reputation as a lawyer, which you have done in your article, or to
infer (without any basis at all) that I have violated the canons of
ethics governing attorneys, by which I govern my actions.

I will await your response.

Chris Imlay, N3AKD

And here is my reply:

Dear Mr. Imlay:

Thank you for reading my column in the SBE Chapter 124 Newsletter "Water Cooled".

I will not be giving you a retraction for any of my statements published in the July 1996 issue as you have requested. My statements are my personal opinions and views. I do apologize if you feel you have been hurt or damaged by my statements. My intent is to spur thought and action, not to personally attack. If your actions require others to think or act, don't you think they have the right to be informed? I believe my statements to be true and have been given no reason to retract them. My statements, by the way, are my own and don't necessarily reflect the views or opinions of Chapter 124, it's officers or members.

I am a member in good standing of both groups and do many hours of unpaid work for the benefit of both groups and their members. I take personal offense at the threat of lawsuit by their counsel. It is unprofessional and you are certainly coming close to conflict with your fiduciary duty to both groups by proposing to sue a member. Perhaps it is you who owe me, and the Society of Broadcast Engineers and the American Radio Relay League an explanation for your actions and your lack of action in certain critical spectrum protection matters.

After much discussion with SBE and ARRL BOD persons and members I have decided that the best way to deal with this matter is to offer you the chance to refute my statements or rebut, in your own words, in my column for publication in the next issue. In other words, please give yourself the chance to "educate me on the subject of my article to correct the errors in it".

I know you'll also agree that, if you choose to pursue litigation, the proper forum for legal action would be an Oregon court as the column was written and published here.

Sincerely,

James S. Kaplan KG7FU

Yes, I remember all those things too. Your posting brought back a lot of fond memories. Got my novice ticket in 1952 while living in Redwood City, CA. Although I prefer the modern equipment we have today I have built a lot of my own equipment, because that activity is what excited me the most about the hobby. My first station was a Hallicrafters S-20R that my dad had kicking around. It didn't even have RF input stage. DX was any signal on 80M outside of the state. The transmitter was a single 6V6-GT with power xfr & 5Y3 built on a bread pan that I filtched out of mom's cubboard. The circuit was in Radio-Tv News. After a few years I rebuilt an ARC-5 using a 6146 and a 12AT7 as the Carter modulator on AM for mobile. The receiver was a Morrow 3 Band converter piped into the car's AM radio. Power came from a war surplus dynamotor. We had a pretty active group on 3995 KC (remember that term?).

Thanks for the nostalgia.

Hi..

I just received the DFK3 separation kit for my 741A. It appears I have everything I need, except for some kind of plate to put onto the radio where the faceplate was.. Am I missing part or am I supposed to leave my radio exposed ?? .

Btw, I plan to mount the radio under the seat, and the faceplate above the rear view mirror on the headliner.. hints, suggestions are appreciated! 1991 Chevy S-10 Blazer...

One of my ARRL books from the 60s (Understanding Amateur Radio) showed how to increase xtal frequency by grinding it. You'd slide it in a figure-8 pattern over some abrasive powder.

My first rig was a Heath DX-60B with the HG-10 VFO so I didn't have to resort to using xtals.

I do, I do. The cheapest/best receiver I ever had was a BC455? that covered 40m mixed down to the BC453? tunable 455KHz frequency with the 50KHz IF. Dang, that was a good receiver.

Did you ever spend hours removing the base of the $1 JAN 1625s so you could separate the suppressor grid from the control grid only to find out they were also tied together inside the glass envelope? So forgit the cheap grounded grid amp.

Hello Again:

There are some wise words here from one of the original boatanchors-list "founders" we all may do well to read and remember:

From: nick@cs.unc.edu (Nick England) |-(1)

>I was one of the original 5 members of the "boatanchors" e-mail list
>when it was first created several years ago. That list has grown over
>100-fold and has provided information and sources of parts and equipment
>that has given tremendous impetus to the hobby as a whole. Whenever I
>see magazine articles on vintage communications and ham radio equipment,
>I almost always recognize the author from the "boatanchors" e-mail list.
>There are now dozens of Boatanchor WWW sites and an active network of
>boatanchor afficianados around the world - both on the air and on the net.

>One of the characteristics of most conversations on the net and in
>person about vintage gear is the recognition that "this is just a hobby"
>- exchanges stay pretty cordial and the degree of helpfulness is
>extremely high. We're all in it for the fun of exploring technology,
>for the nostalgia it evokes, for the thrill of amateur industrial
>archeology, and for the comradeship of others who share a common interest.

>I think the name "boatanchors" is appropriate in
>that regard - it helps set the tone of the group, something that
>recognizes this isn't life-or-death stuff, that we're here to have fun
>in our slightly off-beat corner of the world of technology. The term
>isn't too arcane or "insider", folks within the ham radio community
>recognize it right off the bat, folks from other technologies
>recognize the term pretty readily, and placement within the
>rec.radio.amateur hierarchy seems to provide very good context.>

Now, if we can only remember these tenets maybe we can get this newsgroup off to a fine start without engaging in any stupid pissing contests over what amounts to be virtually nothing!

73,

Michael Crestohl,

Hello Everyone Interested in the proposed rec.radio.amateur.boatanchors newsgroup:

Some interesting comments have come along:

From: vancleef@netcom.com (Henry van Cleef)

>I feel a good deal of concern about the hostility shown toward
>non-hams in the discussion that preceded the RFD. Are non-hams going
>to be welcome on this group or not? I note that the RFD was not
>posted to rec.antiques.radio+phono, which probably gets more
>discussion of old receivers and test equipment than any of the ham
>radio newsgroups.

Hank:

I have been following the discussions closely from the beginning last April. Yes, there may have been a few comments that would lead someone to believe that having a ham license was an important credential to discuss tube technology but you must know by now that most of the folks on the Boatanchors-List do not agree with this philosophy. There have been many knowlegeable postings from non-licensed posters that were informative and instructive and they were well read and appreciated. I, for one, could care less if someone is licensed or not. I have long ago learned that a ham license doesn't indicate wisdom or intelligence. There are a LOT of unlicensed folks who are valuable resources - how many hams are really knowlegeable about short-wave broadcast or utility station monitoring? I feel that this philosophy of sharing will be evident in the boatanchors newsgroup.

I also feel that other related subjects, such as test equipment, trouble-shooting and restorative techniques, modes of operation, etc will be welcome on the newsgroup as they are welcome on the Boatanchors-List. They are all part of the wonderful world of boatanchors....

I also think that the RFD was not posted to rec.antiques.radio+phono because the proponent thought it would be unwelcome there since it is pretty clearly stated that amateur radio band only receivers and transmitters were outside the area of interest of the group. Also the rec.antiques name removes it from the rec.radio.amateur sphere to a point that it would lead some to believe that it focuses more around antiques than it does radios. It is also possible that the proponent did not know of the group's existence.

Hank, I have read your posts on the Boatanchors-List and have learned much from some of them. I feel that many would agree - you (and anyone

else with something useful to contribute) would be a most welcome participant in a boatanchors newsgroup. I think most readers judge someone on the quality of their posts, not by the mere fact that they have a ham radio callsign!

Please vote YES for rec.radio.amateur.boatanchors when the CFV is announced.

Michael Crestohl

Actually, contrary to your assumption, the Singing Postman WAS a member of a punk band in 1977! I saw him "performing" (for want of a better word) at the Railway Hotel, Putney in that year. I believe he was supporting "Johnny Moped" and "Chelsea" on that occasion.

I have never heard of Eddie Grundy, but Bill Grundy was the London TV presenter who was sacked for encouraging the Sex Pistols to cuss on his early-evening news magazine programme, also in 1977. (No-one would bat an eyelid nowadays ... such words are common-place on Children's Television now! Well .... at least on "TFI Friday".)

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
6,000 FILES IN 119 FILE AREA'S..so far !

latest list of AMATEUR RADIO WEB SITES & PAGES
now 2,405 websites & pages !!!!!!!!!
and GROWING FAST ?!?!!

P.S. also available on the web at:

http://www.padl.ac.at/schule/chemie/bob.htm
look for web-sites by KB6AXK on the page........

FYI:there are roughly ,over 33,000 pages,just pages,
that relate to amateur radio/ham radio on the web ???????
My list is primarlly websites..............

>the specifications for vehicular electronics system is more
>stringent that Mil Spec, you might get worried. Any one with some
>facts to fill in?

The vehicle power buss is very dirty. During starting, transients
of 300 volts are not uncommon. Any time an inductive load switches
on or off (a fan motor for example), there will be a nasty spike.
Any electronics used in a vehicle needs suppressors to protect it
from these spikes and surges. That's normally built into equipment
designed to operate in the auto environment. But if you build something
yourself to put in the car, make sure you use adequate suppression
and filtering.

It is also normal for the vehicle electrical buss to vary from as
low as 10.5 volts to as high as 14.8 volts during normal operation.
So use of regulation is highly recomended for equipment which won't
tolerate fairly wide voltage swings. Once the alternator has recharged
the battery from the starting drain, the voltage will normally stay
in the range of 13.8-14.2 volts on the vehicle buss. But during peak
charging, voltage will rise to 14.8 volts, and if you run equipment
with the engine off, the battery can go down to 10.5 volts as it
nears the point where it is so discharged that it won't start the
car. (You should never let a car battery discharge below 10.5 volts
or you'll shorten its life.)

A number of ham rigs get *real* squirrelly when the voltage drops
below 11 volts. You can get that at the rear terminals of the radio
even with the battery at full charge if you have significant resistance
in the wiring to the radio. 1.3 ohms will drop 1 volt for each ampere
of draw. With a radio requiring 10 amps, you could wind up with nearly
zero volts at the back of the equipment if the resistance of the total
wiring between the battery and the radio were only an ohm. You want
wiring that has a total resistance in the 1/100ths of an ohm range.
Use heavy cables and good connectors.

Dear All,
I am looking at constructing a shunt regulator that will need to control 1.2kV at about 200 mA maximum and 20 mA minimum. Can some one suggest a suitable valve that will work in this environment, sinking say 250 mA at 1.2 kV, being capable of withstanding 2 to 2.5 kV (anode to cathode).

This is to "improve" a very old transmitter PSU that consists of a selimium full wave bridge and two inductor capacitor stages. This was the subject of a posting several days ago, thanks for the replies.

The transformer is poking out 1.8kV RMS and the bridge is loosing enough to go down to about 1.1kV DC out put to the first inductor stage. When the key is depressed on the TX the 1kV which is available at the PSU output goes down to about 900 V. Pretty poor regulation, also causing chirp etc. You should hear it, sounds like a thrush at full belt!!!.

The plan is to replace the selimium with metal, subject of an earlier post about T1154 PSUs, and then plug a shunt regulator across the O/P. A resisor will be used to get the volts down to about operating condidtions before it reaches the regulator. This means that the regulator will be operating at 1.2kV. The transmitter is rated at 200mA full load as described above, hence the parameters described above. I am guessing that the PSU can deliver 250mA as it is "battleship" engineered but I can vary the ballast resistor to suit.

I appologise right now to those purists who would rather I replace the selinium with another similar lot. Unfortunately I can't cos I havn't got any also I want the system to work, not be a museum piece.

So, ideas please. I am after suggested valve types and some characteristic data. Preferably ones that I stand a chance of still getting.

Regards

Robin

The Singing Postman was a 60s one off. BBC Radio Norfolk (I think) featured him in the early mornings and he went on to pen such hits as :-

Have you got a light boy?

Mind Your Head boy.

Come along a me.

All sung in a broad Norfolk accent with his own unique guitar playing. America had Bob Dylan, the French Francois Hardy, the Canadians Neil Young and Joni Mitchell, Norfolk had the Singing Postman. If anyone has any of his records they wish to dispose of please let me know. I suspect the chances of a revival are slim. One of his songs was used in a recent ad campaign and they needed to pay him the royalties. I read somwhere that he was tracked down to a Sally Army Hostel for the homeless in Grimsby, the light was weakly on but no one was in. Although most people thought he was a "piss take" he did have a following among some of the older Norfolk Folk. A fond childhood memory to me.

Adge Cutler, from Brisle (Bristol in received pronounciation), headed the Wurzels. At least two top 100 hits :-

Drink up thee zider

I've got a brand new Combine Harvester (Ooh Ar, OoH Ar)

Eddie Grundy. Obviously no Archers fans here. A top 20ish hit with "Clarrie".

Apologies for the zilch Amateur Radio content of this post but I thought Walt and our American cousins might like to know.

Whilst I am in favour of CW, C&W leaves me cold. I don't suppose any Chicago Blues practitioners or members of the great psychadelic bands from San Francisco were hams? Turn on, tune in, drop out. That Gerry Garcia, there was a real guitarist.

Bill, you seem convinced that there will always be a problem and that only GMRS repeaters are legitimate users of that chunk of spectrum. The GMRS did not allow repeaters on the 12.5 kHz offset channels, only on the regular 25 kHz channels. Similarly, the new FRS does not allow ANY repeater stations.

The new 12.5 kHz offset channels used by FRS use very narrow deviation (2.5 kHz max) and low power 500 mw. It's much less a problem than having a new GMRS user license the SAME channel running 50W. That's one of the tradeoffs in using an uncoordinated radio service like GMRS or FRS. If the adjacent channel rejection of an existing GMRS repeater receiver 12.5 kHz away from the frequency is inadequate, the owner has an opportunity to improve station performance, or can choose to live with any interference that exists from any source.

It is quite possible to resolve those technical shortcomings using modern, up-to-date radio equipment. In the 928 MHz band channels are spaced at 12.5 kHz by FCC edict. Five watt 9600 baud digital transceivers routinely operate up there without difficulty, even when they are located at the same tower site.

Can someone tell me when the first KB6xx 2x2 callsigns were issued?

I have had an Advanced Class license since 1968, but didn't bother to get a 2x2 callsign until I renewed my ticket in 1988, after living in 6-land for 13 years.

I'm considering getting an earlier callsign that would reflect my length of time as an Advanced-Class licensee, under the vanity callsign system, when the appropriate gate opens. I'm also considering a certain K6xx 1x2 callsign, if I make it to Extra by the time vanity gate #2 opens.

Any help would be appreciated...

State of Michigan
John Engler, Governor
Department of State Police
714 S. Harrison rd, E. Lansing, MI 48823
Col. Michael D. Robinson, Director
February 16, 1995
To Whom it may concern:
Under Michigan Compiled Law Section 750.508, it is not necessary to
have a scanner permit issued by the Michigan Department of State Police
to equip a vehicle to monitor frequencies assigned by the FCC for police
purposes if you are a bona fide amateur radio operator holding a
technician class, general, advanced, or extra class amateur license
issued by the Federal Communications Commission. In order to exercise
the privilege of equipping a vehicle to monitor police frequencies, you
must have your Federal license in your possession.
If you rely on your license to scan police frequencies, we suggest
you carry this letter with you to show law enforcement officers as needed.
Sincerely,
Joe Steffel, Captain
Division Commander
Communications Division

VEHICLES EQUIPPED WITH SHORT WAVE
LENGTH RADIO RECIEVING SETS (MCL 750.508)
"Any person who shall equip a vehicle with a radio recieving set that
will recieve signals sent on frequencies assigned by the Federal
Communications Commission of the united states of America for police
purposes, or use the same in this state unless such a vehicle is used
for or owned by a peace officer or a bona fide amateur radio operator
holding a technician class, general, advanced, or extra class amateur
license issued by the Federal Communications Commission, without first
securing a permit to do so from the director of the department of state

police upon application as he or she may prescribe, shall be guilty of
a misdemeanor, punishable by imprisonment in the county jail for not
more than 1 year, or by a fine of not more than $500.00, or by both
fine and imprisonment in the discretion of the court."

% The problem, however, is that the FM-6 was designed to be a "bug". That
% is to say that it collects all ambient sounds and transmits them at the
% same levels. This makes monitoring the frequency exceedingly difficult.
%
% So here's the question: Does anyone know of a (simple) way to filter
% the FM-6 so that only the voice range (300 to 3000Hz) will be heard?

That's not what you want to do. Instead of trying to limit the
frequency response, disable the AGC. Make sure that the mike is then
the right distance from the speaker's mouth. If totally disabling the
AGC doesn't work well, you might want to just back off the AGC for less
compression.

Over the last three years I have used the pana-max surge protectors and on two different occasions have filed a claim and both times been turned down, the last time the was no voltage spikes or lighting just a failure of their protector, line voltage was OK and monitored, causing major damage to my sat rec.. Even with all cables disconnected just ac hooked up to retain memory they still turned down claim, the first one cost me 3 thousand dollars. Though I would pass on to others so they would not have the same problems, I will buy the ones from wal-mart at 19.00 dollars and save over 50 bucks.

I would like to hear from other good or bad and plan on sending a letter to better business bureau. Please respond to bga2@pge.com

Jim

If you like the volume knobs you can assign the top knob as volume on the 51 if you want to. You'll just lose the ability to change freqs via the knob.

> Yep - most of the stuff. I recall talking my dad into buying me a couple of CK722's and, after a minor
false start, having him help me build an AM RX from the Raytheon "apps book". (basically a crystal set
with a CK722 AF amp. the detector diode may well have been a germainum diode, don't recall for sure.)

I can vividly remember the glow of the burning filaments of the vacume tubes in the receiver built from
the plans in Popular Mechanics. My first short wave receiver.

Last year, my dad sent me his not-too-old (relatively speaking) Drake R-4B. Did a little cleanup, then
fired it up. My two Jr. Ops, then age 12 and 10, came wandering in. "Is that the radio Grandpa sent?"
"Does it work?" (yes, it did.) "COOL!!" Then, a pause, silent peering into the cabinet... "Dad, what are
all those LIGHT BULBS bulbs inside??"
age
>
> My special thanks to Bill Welch, W6DDB, formely W1SAD in Waltham, MA(circa 1954) who tutored me in my first license at the El-Ray radio club of Ratheon. Thanks Bill for all the many years of fun and
enjoyement. I don't know where you are but I hope and pray that you are well. If any one knows Bill,
please pass this on to him. Thanks.

FYI, Bill is still around - Lancaster, CA, I believe. Ran into him on 40 CW about a year ago, and figured
out I had hooked up with one of the good guys. I was trying to re-create my always marginal CW skills, and
Bill hung in there patiently. Great discussion, talked about our Boy Scout leader experiences, etc. Just
got a recent CQ magazine from a friend, Bill had an article. It was about getting started in ham radio, as

I recall. Seems to fit the guy's image!

Thanks for letting me "nostalgize" a bit. I have temporarily lapsed to appliance operator, but I still
have a garage full of partially finished projects and a large junk box of parts. Does that qualify?

Bob,

Number 2 on your most missed list is Battery voltage missing from VFo.

You can still get battery voltage with the touch of 2 buttons..The 12 volt adaptor is about $40 and slides under the battery,it is more expensive than most but works well. The clone feature is very handy if you travel alot because it allows the radio to be programmed via a P.C. So you can save files for many different cities and when you need to just take a minute and download it all to the radio.

http:/www.cris.com/~lsbutler You'll see several city files under my Amateur link for the 51 using ADMS software.

Les

5558. OLD TIMERS! Rember the ARC-5's

Newsgroup: rec.radio.amateur.misc

I'm kind of in a nostalgic mood tonight and was remembering the good old days of Ham radio when 2 meters(AM only) was not just another CB band, when you had to learn morse code to get your license, when you converted surplus radios back in the 50's, when you built your own equipment and were so excited when you got it working and actually made a contact in CW. REMEMBER THOSE DAYS. Remember the days when you had to know something about electronics to get a license and to build and transmit your "HOME BREW" equipment. Does anyone know what the word means today ? Today the term "appliance operator" seems to be the norm. Does anyone remember a "cat's whisker", a CK-722, a 6L6, a 1N21, a J-38, a geranium diode, a 35Z5, a 12SN7, an ARC-5 ? What are these strange terms?

I built my first radio when I was 13 years old in 1953 and can remember going to the parts store and laying out pennys on the counter for the resisisters, capicitors and diodes. I can vividly remember the glow of the burning filaments of the vacume tubes in the receiver built from the plans in Popular Mechanics. My first short wave receiver. Super regenerative it was. And when I heard that first squeal of the oscillator I was hooked. No such thing as beams and yagis in those days. Just long wires and a good ground system, a radiator, if you could find it. Oh, but what a challenge!

I just renewed my license for another ten year and was looking at the "OLD TIMERS" certificate I received from the ARRL after being licensed for only 20 years. I treasure it and am proud to be an original "HOME BREW" ham for 40 years now. I am just wondering if it isn't time to start a place on the internet for rememberences of the good old days of the real ham radio. Any suggestions would be appreciated.

5559. IC-706 on battery power?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-16 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDuM080.5nz@netcom.com>
Source record: 220997

This year, our club used three Icom IC-706 transceivers: one each on 10/15/20m, 80/75m and 6/2m, for Field Day.

One problem we encountered was a lot of noise from a nearby generator in a motor home. Next year, we'd like to use the 706s on battery power. Being a newbie in this area, I'd appreciate some help.

First of all, has anyone tried operating the 706 in a contest, using only battery power? What rating was the battery, and how long did it last? How long did it take to recharge?

Thanks in advance, for any advice.

Think I saw an article at www.cnn.com that suggested the case against the "vipers" is falling apart anyway. Guess that the judge let half of them go home and the other half standing trial on weapons charges. Seems that the a lot of the alleged terrorist activity may have been urged upon them by the informants themselves. You can check it ourself at their web site (I think that is where I saw the story).

Ham radio supports a wide range of activities, probably most of them healhy. Since hams are themselves a cross section of the population (for the most part) you can expect all kinds of folks to use ham radio at one time or another. We don't currently have an "ethics" or "morality" test or, for that matter, an "intelligence" test to become licensed. If these guys were on "shortwave" its likely they even passed their CW test. So there goes the argument that CW filters out the creeps. Oh well.

Why do you think they are trying to take away our most popular 2m and
70cm bands? To put a stop to CBers and freebanders from communicating
with each other.

Hi Jim, it's easy to calculate. Assuming you transmit half the time at full power, that's an average of about 10 amps. So an 80 amp-hr deep discharge battery will last about 8 hours at full power, about 16 hours at half power, etc. Even though the IC706 is a power hog on receive, it will run a couple of days continuously receive-only on an average car battery. You can charge the first battery while you are using a second one.

How about removing the resistor alltogether and using the regulator
bias current to (a few 10s of mA) to provide the drop across the zener.

A couple of 0.1uF capacitors between input and common and output and
common on the regulator to avoid instability.

I have used an LED for the zener, with a 12V regulator you get 13.9V and
an "ON" indicator.

Mike

>How about removing the resistor alltogether and using the regulator
>bias current to (a few 10s of mA) to provide the drop across the zener.

Some of the lower-current regulators don't provide enough bias current
to let the zener stabilise. I was caught by that once as well, and now
prefer to include a resistor if possible. The extra cost of the resistor
and soft-start capacitor is minimal, and it ensures that the design is
reliable.

>A couple of 0.1uF capacitors between input and common and output and
>common on the regulator to avoid instability.

Agreed. I did include them (well, 0.22uF actually), but I didn't put them
on the ASCII-art schematic as I though they were 'obvious'.

>I have used an LED for the zener, with a 12V regulator you get 13.9V and
>an "ON" indicator.

I like that. I assume it must be a red LED to drop 1.8V

Brad, there is no fast scan amateur satellite activity that I know of. As to using an amateur satellite for broadcasting... broadcasting is not one of the amateur privileges. We are allowed to communicate, control, relay, etc., but not to broadcast. ARRL does it for training purposes although technically it is illegal.

JustMe wrote:

> when you had to learn morse code to get your license,

Yes, it was the summer of 1949, I rented for $5 a month
a crack-up, spring motor Instructograph, paper tape
code teaching machine. Spent hours with that thing, and
got up to 13 wpm in 3 months or so. Passed my license
test as a Class B in 1950.

>when you converted
> surplus radios back in the 50's, when you built your own equipment and
> were so excited when you got it working and actually made a contact in
>CW.

Of course, the little ARC-5 set up I had, was real cheap. Ads
all over the pages of QST and CQ were offering them for $3or 4
each!! Had to remove the little motor/generator gadget on the
back, and build on a little filament and B supply. Had to
rewire the filaments, as I vaguely remember. Actually,
these were my 2nd rcvr's, had them for both 40 and 80 CW.
First rcvr was also a superregen job; built up from parts
I had to order by mail from Allied, Concord and Burnstein and
Applebee; lived out in the middle of nowhere, so mail was the
way to get stuff. Forgotten the ARC or BC numbers of all the
stuff I had.

>"cat's whisker",

I still have one; looks exactlly the same
as the one at the upper right corner of my OOTC certificate,
#3040!! Also have a box of galena crystals, some of them were
pretty "hot" as I recall, from my pre superegen SWL listeneing
days.

>a CK-722, a 6L6, a 1N21, a J-38, a geranium diode, a
> 35Z5, a 12SN7, an ARC-5 ? What are these strange terms?

Unfortunately, after a few QTH moves, particularly out here
to KH6 land, I have tossed most of my old stuff, too bad.

> I can vividly remember the glow of the
> burning filaments of the vacume tubes

My power supply I built for my ARC-5 40 meter CW rig, had a
pair of beautiful glowing mercury vapor rectifiers, plus

two maroon glowing voltage regulator tubes. It was probably
the most impressive sight for visitors to my station! And I
loved it. The glows rose and fell with the keying of the rig,
it was great.

>I am just wondering if it isn't time to start a place on the

>heard, then going back and reading what I had typed/written?

No, you wouldn't be able to carry on a QSO without typing what was
sent to you and then reading it back. But I know a number of amateur
and commercial operators who do just that (at fairly astounding speed
too). This method is for people who really want to copy Morse (it isn't
copy until it is on the paper), and particularly for people who have
trouble "copying" in their heads. Morse is so much slower than the
information rate we have evolved to use that it is difficult for many
people to hold the information being sent long enough in their heads
to receive enough of it to make a coherent thought. By putting it on
paper, they can hold the ideas being sent to them until such time as
they can read it at a speed which makes comprehension of the ideas
sent easy.

For example, if the last paragraph were sent at 5 WPM, it would take
nearly 30 minutes. Do you think you'd retain the first sentence that
long if you didn't write it down? Do you believe you'd have a coherent
idea of what was said? Even at 20 WPM it would take about 7.5 minutes.
Would you still be able to make coherent sense of it after that long?
I know I can't. It takes about 60 seconds to speak that paragraph, or
about 10 seconds to read. At those rates, you can grasp what is being
said. At the torturously slow rates of Morse, you can't.

That's why Morse usage on the amateur bands is often extremely stylized
and abbreviated. If all you want out of a CW QSO is to just exchange empty
stylized formalisms with other stations, then perhaps you don't need to
learn to copy Morse. But if you want to exchange complex ideas, or if you

want to handle traffic, then verbatim copy is essential. Reflex copy is about the easiest way to obtain verbatim copy.

No 'tisn't.

From 97.111 of the FCC rules:

(b) In addition to one-way transmissions specifically authorized
elsewhere in this Part, an amateur station may transmit the following
types of one-way communications:
...
(5) Transmissions necessary to assisting persons learning, or
improving proficiency in, the international Morse code; and
(6) Transmissions necessary to disseminate information bulletins.

That pretty well covers what W1AW does.

Part 97 even allows someone to get paid for broadcasting the
aforementioned types of items, under certain conditions.

Followups to rec.radio.amateur.policy.

>If you're using diodes or zeners to 'jack up' a regulator, they only
>carry the (low) current needed by the regulator itself, not the load
>current. They don't need to be highly rated.

Yeah, that's right. For some reason I was thinking the regulator
was a shunt regulator. It isn't, of course. It's a series pass
design. So the main current goes from input to output, and very
little flows through the reference pin, probably only a couple
of mils.

I've thought of another thing too. Most of the TO-220 3 terminal
regulators can only handle 1 amp. This application needs more
current. A solution to that, at the cost of another 0.6 volt,
can be had by having the regulator drive the base of a series
pass transistor like a 2N3055. Then the regulator transistor
handles the heavy current and the 3 terminal regulator only has
to handle the output current divided by the beta of the 2N3055,
or about 50 times less. The downside is you lose the overcurrent
shutdown feature of the 3 terminal regulator when you do this.
In this application, a fast fuse should substitute nicely, but
another transistor could be added to starve base current to
the 2N3055 during overcurrent periods.

Just a reminder that, if you're taking part in the IOTA contest,
the latest version (8.08) of Super-Duper for IOTA (SDI) is
available as freeware from http://www.iol.ie/~okanep or by
anonymous ftp from ftp://ftp.iol.ie/users/okanep/sd/sdi.zip

If you're in North America, try anonymous ftp from
ftp://ve7tcp.ampr.org/software/sd/sdi.zip

Included are the full rules and the latest IOTA references (used
with the permission of the IOTA committee).

SDI is the only logger dedicated to the IOTA contest.

Hope to work you all from EJ1D on Bere Island (EU121), Bantry Bay,
County Cork, Ireland.

5585. Satellite Tracking Program

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-16 00:00:00 UTC
From: psgeorge@infinet.com
Message-ID: <psgeorge-1607961617410001@cmh-p141.infinet.com>
Source record: 221050

I have a question... Is there a consensus as to what is the best (feature, price, etc.) satellite tracking program available (PC or Mac)? I've been using WinOrbit (shareware) and it does a reasonable job, but it does lack a few features such as tracking multiple satellites in the same window and the ability to interface with an antenna Az/El controller.

If anyone out there is using one or has an opinion as to which one is best, I would certainly be interested in your opinion.

Thanks!

No offense Jim, but duhuhhhhhhh! hehehe. That's why it was mentioned
in the first place.

>Someone must have had a sense of humor. QLF is a pseudo-Q-signal for "try
>sending with your left foot." :-)

Which is true Jim, and that is the first thing I thought of. But then
I looked it up in the callbook and it is a real issued
callsign...probably of one of the set crew members. Their technical
assistance could have used a tiny bit of help though. I bet no one on
the set ever thought of the "try sending with your left foot" Q
signal.

Announcing NEW Ham Radio.FAQ

This file started as a regular USENET posting called "rec.radio.amateur
.misc Frequently Asked Questions".

The evolving file was distributed far and wide thanks to passionate
contributors. The file was abandoned in 1994 and is being
resurrected now
on the WWW for currency and convenience.

All help is welcomed!

Please scan the file. Know of links that should be added? Info that
should be corrected? Let me know!

Please provide a copy of the Ham Radio.FAQ to any new or
soon-to-be Hams
that you know or share with them the URL to this site:

http://www.mv.com/ipusers/wd1v

Want to learn all about radio direction finding, hidden transmitter hunting and jammer tracking? The Homing In site on the World Wide Web is now available for your browsing pleasure. There you will find:

--- Southern California T-hunting, what equipment the winners use
--- International-style foxhunts have come to California
--- Complete design fixes for the Dick Smith doppler set
--- Updates to the Moell/Curlee book (TRANSMITTER HUNTING---Radio Direction Finding Simplified), including board/kit/parts sources and building tips.
--- Frequently Asked Questions and answers from the Homing In mailbox
--- Index and subject list of all Homing In columns in 73 Magazine through September 1996 (over 90 articles)
--- And lots more...

URL is http://members.aol.com/homingin/

Please add it to links at your RDF and ham radio sites.

The Homing In site is written and maintained by Joe Moell K0OV. It is not affiliated with 73 Magazine, Wayne Green Enterprises, or any other commercial entity.

Hi, Dave.

Although I got my ticket in 1962, I, too, started out with a
Hallicrafters S-20R receiver. I don't remember how I got the S-20R, but
it was used when I procured it. I thought at the time that it had a very
stable BFO. Remember the coil instead of the PM in the speaker?

My first transmitter was a Heathkit DX-20 which I also got used. It was a
50 watt xtal-controlled CW 80-10/11 meter rig. As you know the 11 meter
coverage was included because it was part of the ham radio spectrum when
the rig was manufactured. I wish I could find a DX-20 in good condition.

but he won't explain the reasons why such a retraction is
neccessary. He just throws out the threat of a libel suit.

Cute. And people wonder why the legal profession has such
a bad reputation...

5599. Its OK to order pizza on 2m autopatch

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: charles1@netcom.com
Message-ID: <charles1DupAov.6KC@netcom.com>
Source record: 220866
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

I was going over the advanced question pool and ran across A1E05
(page 37 in RS book). The note specifically states its OK to
order pizza on amateur bands. I could have sworn the exact
opposite was in the no-code tech question pool (RS book).

Anybody seen the no-code tech question that disputes this?
(I gave my no-code tech book away sometime ago)

Anyway, here is A1E05:

Q: Which communication is NOT a prohibited transmission in the
Amateur Service?

A: Calling a commercial tow truck service for a breakdown on the highway.

Note: Calling a business to make a hotel reservation, calling to order a
pizza, or calling a tow truck is PERFECTLY LEGAL on the ham bands.

If I understand this, any 2m autopatch call is OK as long as the
Ham can not make money from it, but its OK to make a call to
spend money at a business.

People,
I just talked with ten tec today. For those of you that dont know the
Ten Tec Titan was discontiued....

Ten Tec has decided to do one last production run of the Titan because
of many customer requests. It will be called the Gold Series. The price
is $3375. I would like to have one, but this is a lot of money.....
Any opinions.

chuck sherwood

FYI: Ten tec is at 1-800-833-7373.

Source record: 220870
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.misc,rec.radio.amateur.equipment

Greetings all, I am looking for info on the construction of phasing coils (pitch/spacing/form dia/wire gauge/etc...) for 6m and up antennas (or down, though I am assuming the wavelength vs. material size would effect things on HF).

Also info on the pros/cons of using phasing coils or shorted stub delays. Does the better element spacing of the coil offset the radation from the coil, or is a shorted stub (at 90deg to the elements) better. How much does the position of the stub (at 90deg or folded against the element) effect antenna pattern?

All assumtions are made for 2 - 4 element VHF/UHF verticals.

> experiences with minivans.

I equipped my `82 VW Transporter with a platform to support different
transceivers on the dash board <sp?> by inserting a cheap equalizer
as a spacer underneath. I could have mounted almost any rig shorter
than about 25cm (10") tilted in the dash board, but living in a high
crime rate town, I didn't want to expose my equipment too much.
I also added a switch for the aerial so that I can use it from the
back as well as from the front. This setup has worked well for the
last few years.

Since my car is a 50hp diesel without any electronics (apart from the
above mentioned stuff) I don't have any problems with interference.

Hope that helps,
Jens, DB9LL

Just a slight clarification. I'm not the past or present maintainer of
the Ham Radio FAQ. It was originally the fine work of Diana Syriac,
KC1SP, later taken over and expanded by Ian Kluft, KO6YQ. I'm presently
working with some new volunteers to bring it back, but I'm going to try
not to interfere with or micromanage this effort, as I feel my time is
better spent on the Elmers List.

Looking forward to the show. Kudos for Len Winkler for putting it on
the air each week.

I noticed that, too. Although I didn't take much notice to the fact
that they were on 30m. But, now that you mention it, "HEY, THEY CAN'T
DO THAT!!!"

But, sure enough, I went home and looked up WB6QLF. I wonder if he is
going to talk to the studio for using his call and make some royalties!

I totally agree. The first wiper-delay I built and installed in my '74 Chevy Nova worked perfectly. The second, using the identical circuit, installed in an '80 Chevy Malibu was flaky as hell. Turned out that the windshield-wiper motor, when it shut off, was spiking the buss with a huge, negative-going pulse (it blanked my scope even on it's highest voltage setting, 100V I think.)

That was a low-draw circuit, just a 555 and relay, so I build a simple L-C low-pass filter to clean it up. Neither the L nor the C by itself was enough.

Now my question is, with a high draw device such as a transmitter, is there a simple, passive filter that will accomplish the goal? Seems like the series inductor would have to use some pretty hefty gauge wire.

5614. Large Ham Classified database->http://www.sarrio.com

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: wb6siv@cyberg8t.com
Message-ID: <wb6siv-1707961904550001@host55.cyberg8t.com>
Source record: 220881

The Raymond Sarrio Company's Ham Radio WWW site is proud to announce a FREE Ham Radio classified advertising page at:

http://www.sarrio.com.

This new classified section will allow Hams to search for equipement with the help of a search engine--no need to scroll through 100's of listing before you find that special piece of gear. Plus, when you find the gear your interested in, each listing comes with point-and-click e-mail access direct to the Ham that listed the item.

For those Hams with gear to sell, take note! It is absolutely FREE to list your equipment within the Ham Classifieds, and there will be no posting time delays.Your posting will go on-line, in our classified search engine,in about 1 hour. All you need do is fill out a simple forms page, and upon its (point-and-click) submission, your "For Sale" advertisement is on-line.

I will be purging the classified listing initially about once every month, but that timeline will shorten as our classified numbers go up. Give it a try, and let me know how you like it. 73's Ray

>more added text than new!"....

You can do what you want by deleting the '>' characters from in front
of the included text, or at least you could with all the rn-based newsreaders,
That's assuming that you can even edit the included text with whatever it is
you are using.
I tell you this at the risk of having more fully included text messages
that I probably won't be reading anyway since I have to use kill files
and scan subject lines these days due to the large volume of totally
worthless postings, particularly on rec.radio.amateur.misc
I can't think of any recent threads that would warrant a full inclusion.

Also, I wish that more folks, maybe any folks, would check their headers
to see which groups they are cross-posting to on their followups.

Why not also check what the distribution is set to. The default seems to
be 'world' which is inappropriate (IMHO) for many of the postings and threads.
Try using 'na' for North America or 'usa' or even your state abbreviation
or city airport identifier if you won't ship that 100 foot tower to me.

And maybe lets edit the followup lines to something like alt.flame for
the more insipid topics.

5619. Oo's And hr3207

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <837623571.AA06824@hamlink.mn.org>
Source record: 220886

I have recently seen (and received) some messages which suggest
that the proposed legislation, HR-3207, might not be a good
deal for the amateur service. Just to set the record straight:
--
1) OO's have no enforcement powers, and HR 3207 would not
grant them any such powers.
2) They perform volunteer duties which would otherwise have
to be performed by public employees paid by your taxes.
(In other words, the public is getting something free.)
3) As volunteers, they risk frivolous and malicious lawsuits
when performing these duties, and under current law would
have to defend against such lawsuits out of their own
pocket. Many very qualified people have decided not to
volunteer their valuable services because of this risk.
Others, who have volunteered without knowledge of this risk,
may unwittingly have their savings and property in jeopardy
of an unwarranted suit by a jerk with an "attitude".
4) HR 3207 would simply provide these volunteers with the same
legal defense help they would have if they were paid public
employees performing these duties.
5) If an OO screws up in a fashion that deserves action by a
lawsuit, a lawsuit can still be filed.
6) HR 3207 does NOT increase the powers of an OO in any fashion.

I have a Plymouth Voyager, and for a while had a TS-50 installed on a
cellular pedistal mount. Installation worked very well, and a quick glance
was all that was required to check frequency. The TS-50 has few controls,
so it was easy to use knobs from memory.
I have a 3 pole magnetic mount and separate Valor whips for each band.
Having the mag mount in the centre of the van's huge roof provided a great
ground plane and with under 100 watts, worked all over Europe.
(Condx permitting!)

Good luck.

>Yeah, and how many would still use a hand key to transmit with?

Well Bill, at the time Coast Guard Radio Honolulu, NMO, ceased their
HF code watch (last year) they were still using handkeys. From my first
day at NMO (in '77) until my last (in '82) I exclusively used a handkey.

Last year I asked the CO at NMO if I could have one of their spare keys;
"Too late - all the RMs took 'em home already" was his response.

Never did that, but did use a #2 pencil to lower the frequency, and even managed to use my dad's Comet cleanser-and-glass-plate method to raise the frequency - the trick was to use an even figure-8 motion. Now that's REAL ham radio!!!!

Don,

Hi Don, I have a 1990 Plymouth Grand Voyager. Had it since it was
new and plan on running it into the ground. I've been running a Drake
TR-7 on all the HF ham bands with no problems--using the Hustler MO-2
mast and resonators. A lot of CW from the mobile and just as much
SSB.

I also use 2 meters and 70 cm as well with not one problem....well I
get into my tape player but that's another problem for an after-market
type.

Good luck.

We have a web site for the hamfest....see below

http://home.aol.com/doug03

Well.... if you get this and still need more info let me know.

Don't forget the FIFTH ANNUAL USF "Last Minute" HAMFEST
Sat July 27th 9am to 3pm
in the ice cold air conditioning...

Hosted by the University of South Florida Radio and Electronics Club.

Admission $3.75
1st swap table $10 including ticket. Additional tables $10 each.
Call 1st for table reservations.
Call especially if you need more than 7 tables.
---
call (813) 979-0033 after 5pm

USF is easily located on Fletcher Ave between I-75 and I-275 in Tampa.
Enter campus on North Palm Dr. follow the signs to the
USF Special Events Center.

Just close enough to Busch Gardens to let the family go there while you play!

TESTING WILL TAKE PLACE AT 11AM.

TALK IN 147.24+, 146.94-,and 442.275+
Vendors may setup FRI NIGHT 6-9pm and SAT MORN 8-9am.

SEE YOU THERE!!!!

for more info, direct questions to: douglass@eng.usf.edu
See our web page for more information and maps.

Instant Track has been around for a long time and seems to be a good
one. Depending on how your rotor interface is set up, you may want to
take a look at WISP, it runs under Weendoze and drives the rotors,

> purposes,

Phillip-

Your article touches on a point that may be missed. A local policeman who was also a "scanner nut", told me that laws worded this way may be unenforceable. The law here, as well as that quoted above, specifically outlaws the act of "equipping a vehicle" with the scanner. Unless the policeman actually observes you installing the scanner, he doesn't have grounds to arrest you or interfere. In other words, he inferred that it isn't illegal to HAVE a scanner, only to install one in your vehicle.

Other states may word their laws in such a way to get around this, and the courts may not take this interpretation. But, the practical matter is that police will continue to make such arrests unless challenged in court. As was observed in a case that was a topic here several weeks ago, the police do not always give you the opportunity to show your Ham license or a copy of a letter explaining your authority.

STUFF FOR SALE

$50.00
Almost new!
Entertainment center for up to 26" TV or larger, VCR and Stereo
plus other storage places

Possibly you could even put your radio setup in this one! :)

HAM Stuff

Battery Packs for HAM radio HT's
2 battery packs compatible with Icom and Realistic HT's
These are the battery shells that take standard AA cells that
Radio Shack sells
$10.00 One is empty and takes 6 AA cells
$30.00 The other has 6 new AA 650mAh rechargables included.
Only 3 days use at most.

$125.00
Must show or at least be able to prove you have a valid HAM licence to
purchase.
30 Watt 2 meter RF power amplifier
Custom built using Motorola RF power module.
300mW to 1.0 Watts in gets about 30Watts out.
Has 3 pole Voltage and capacitance tuneable helical filter built in
for receive to reduce intermod.
BNC input...SO-239 output. Heavy duty thick heatsink, 100% duty cycle
at 12V, compact size.
CLEAN output
Power module spuroius emissoins rated at 70db below carier.
12V to 16V

$50.00
2 bay folded dipole
138-174MHz
Commercial design with HEAVYduty clamps
Much the same as Sinclair 210C-2 infact it might be that

Computer parts

$25.00
486SX-25 CPU
Runs reliably as a 33MHz CPU

4 of these...
$5.00 each or $15.00 for all
Unknown make of network cards.
Assumed to be ARC NET type. 8 bit, BNC, possibly have boot proms as
well.
AMD chipset on them. These cards do work as they were pulled straight
from
service rescently.

$1.00
16bit MFM controller card. not sure of the state it's in.

$1.00 for both
do not know if they work...
2 8 bit I/O cards for floppy. Has DB36 female connector on rear of
card.

$4.00
I/O card for floppy. Half card. Has battery and BIOS with 2 serial,
1 game
and 1 LPT. 8 bit
I beleive this one does work.

$45.00

5636. JAMMERS ON 2 METER

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: GHVZ65D@prodigy.com
Message-ID: <4sj8p9$cq0@usenetz1.news.prodigy.com>
Source record: 220903

Greetings,

Last night, I had my first experience with a jammer interfering in my QSO with someone. We just totally ignored him. My question is, isn't there something I can do to stop this? My friend told me that we (amateurs) are pretty much self-policed and not to expect the FCC to do anything until we can document everything and track down the perpetrator. Is anyone here experienced in transmitter hunting that could give me some advice on how to track this idiot's transmissions? What type of equipment would you need to do this? I'm a Tech class operator and the only equipment I own is a dual bnd HT, a shortwave radio, and a scanner. We want to find out who this guy is so the FCC can nail him.

Thanks,
Josh - N3XGR

5637. Help Kenwood TV-506

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: Boyd N6DMF <blfulbri@sloc.net>
Message-ID: <31ED283A.6D7C@sloc.net>
Source record: 220904

Hi,
I have a Kenwood Transverter model "TV-506" (6 meter), that
went with the Kenwood TS-520 & TS-820. What I am looking for
is how to hook it up to a different rig. I have a Icom IC-761
that I would like to run it with.

I would like to find someone that has hooked the TV-506 up
to another gig and talk to them to find out what they had to
do to make it work. I have the book on the transverter and
the service manuals on the 520 & 820, and have looked at the
schematic on them.

Any info would be appreciated....

Thanks,
Boyd N6DMF

I hadn't thought of this idea in years...clamp tubes were used by high power CW DX hogs that used the clamp to keep the CW keying from blinking the neighbor's house lights. The line voltage would pull down once when the transmit switch was on, and would rise back up during receive periods.

Anyway, you're going to need a tube with healthy plate dissipation, something like a 450TH triode should do it.

How are you going to control the regulator's plate current? Back in the days of class C, the operating bias was used to cutoff the clamp tube. When the key was up, the operating bias dropped to zero, the clamp tube grid dropped out of cutoff to zero volts, allowing the clamp tube to pull heavy plate current. But then, that was class C CW. No ballast resistor was used.

Good luck, and keep one hand in the pocket. This stuff is dangerous.

5640. Packet BBS Survey

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-17 00:00:00 UTC
From: marty@trucom.com
Message-ID: <4sjbc3$lom@thepit.trucom.com>
Source record: 220907

Hello, Folks:

Just to keep everyone updated, my Packet Radio BBS Survey is continuing and I have so far received about 300 replies via Internet and around 25 via Packet Radio.

As those who have taken the survey may have gathered, I am considering writting a new Packet Radio BBS program. The ideas that I now have are a bit different from the current batch of PBBS and NOS programs that are available and combine a large number of features found in many current programs, including PBBS, NOS, DX Clusters, APRS, ARES/RACES, and many more.

If I decide to pursue this further, there would actually be at least two programs in the system: the PBBS itself and a "User Terminal" program. The User Terminal would allow full graphical interface and many other special features while at the same time reducing data overhead.

If you have already responded to the Survey, my thanks!

If you have more questions about the Survey or my ideas, please drop me a note either here or on Packet.

If you have not taken the Survey yet, please take a few minutes to do so. It can be found on the Web at:

http://www.trucom.com/ppages/marty

I will also be sending out the survey on Packet again this weekend, so watch for it there with both an @ALLUSA and @WW distribution.

Thanks again!

Take Care & 73

ANARTS News Bulletin 916 7th JULY 1996

This is the Australian National Amateur Radio Teleprinter Society,
with our weekly RTTY broadcast. We transmit on the following
frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)
7.045 MHz -3 0030 UTC VK2CTD (COL)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 916 7th JULY 1996

COLS COLUMN

HERE AS PROMISED IS THE ARTICLE ON RONALDS TELEGRAPH. ITS
FAIRLY LONG AND WILL BE IN AT LEAST 2 PARTS. WITH NO FURTHER
TO DO HERE IT IS :

RONALDS TELEGRAPH

SIR FRANCIS RONALDS CARRIED OUT A LOT OF ELECTRICAL
EXPERIMENTS AND IN 1816 CONSTRUCTED A WORKING TELEGRAPH IN
THE GROUNDS OF HIS HOME AT HAMMERSMITH, A DISTRICT OF LONDON.
IT OPERATED ON THE 'SYNCHRONOUS SYSTEM', THUS REDUCING THE
COMMUNICATING WIRES TO ONE. HE PUBLISHED A BOOK IN 1823 CALLED
'DESCRIPTIONS OF AN ELECTRIC TELEGRAPH, AND OF SOME OTHER
ELECTRICAL APPARATUS', IN WHICH HE DESCRIBES IT AND THE
FOLLOWING DESCRIPTION IN ABBREVIATED FORM HAS BEEN TAKEN FROM
IT.

MORE NEXT WEEK

W.A. NEWS.

THE ANARTS BROADCAST IS TRANSMITTED IN PERTH BY CLEM VK6CW USING THE CALLSIGN VK6TTY ON BEHALF OF THE RADIO AMATEURS OLD TIMERS CLUB. OUR THANKS TO CLEM AND THE R.A.O.T.C.

THE LAST MEETING OF THE R.A.O.T.C. WAS ON 25TH JUNE IN THE CINE-CLELLARS TAVERN. THEIR MEETINGS ARE HELD ON THE 4TH TUESDAY OF THE MONTH. ON THE 9TH OF JULY THIS YEAR THEY WILL BE HOLDING A SPECIAL MEETING AT THE CASCADES TO CELEBRATE CHRISTMAS IN JULY. WE WISH ALL TAKING PART A VERY VERY MERRY CHRISTMAS. WATCH HOW YOU DRIVE HOME HI HI.

TELETEXT IS NOW OPERATIONAL ON BOTH VK6BBR AND VK6ZSE BBS'S. THE LOCAL CONTENT OF W.A. CAST IS PLACED ON PAGES 41 AND 42. THE ANARTS CAST CAN BE FOUND ON PAGES 61 A ND 62.

BOTH BBS'S HAVE THE SAME PAGE NUMBERING FOR THE CONVENIENCE OF STATIONS IN PERTH. ACCESS TO TELETEXT IS GAINED BY THE COMMAND TT. ONCE GAINING TELETEXT ACCESS A STATION WILL GET THE GREETINGS MESSAGE, YOU THEN TYPE THE PAGE NUMBER OF THE PARTICULAR SUBJECT YOU ARE INTERSTED IN.

THE SYSOPS OF THESE BBS'S ARE HOPING FOR A LOT OF INTEREST AND USE OF THE TELETEXT PAGES, THEY HAVE PUT A LOT OF EFFORT INTO SETTING IT UP FOR ALL AMATEUERS. ANARTS LOOKS FORWARD TO THE SAME FACILITY BEING MADE AVAILABLE HERE IN THE EASTERN STATES.

MORE W.A NEWS IN LATER CASTS.

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFO PROVIDED BY BILL, KQ4GC, ANTOINE, 3D2AG, RANDY, KD8JN, CHRIS, G4BUE, AND CONTEST CORRAL FROM QST. THANKS TO ALL.

THAILAND, HS. FRED, K3ZO, WILL SIGN HS0ZAR FOR 3 OR 4 WEEKS STARTING AROUND SEPTEMBER 15. TRY THE LOW END OF 40 AND 20 METERS. QSL VIA K3ZO.

LEBANON, OD. F5PWT SHOULD BE QRV FOR 4 MONTHS AS OD/F5PWT, MOSTLY ON 21186, 18137 AND 14132 KHZ.

ROTUMA ISLAND, 3D2. A ONE MONTH DXPEDITION IS BEING PLANNED BY ANTOINE, 3D2AG, FOR AROUND AUGUST OF THIS YEAR. THE CALL WILL BE 3D2AG/P. CW AND RTTY WILL BE USED ON 80 THROUGH 10 METERS. QSL DIRECT TO HIS CALLBOOK ADDRESS.

NORTHERN MARIANA ISLANDS, KH0. KH0N AND KH0/JA6IP PLAN TO BE QRV ON 80 THROUGH 6 METER CW AND SSB JULY 14 TO 17. THEY WILL ALSO BE IN THE ALL ASIAN DX CW CONTEST. QSL VIA HOME CALLS OR NKDXC, BOX 805, YAHATA, 805, JAPAN.

SRI LANKA, 4S. BOB, G3REP, WHO IS ON THE AIR AS 4S7RPG, WILL BE IN SRI LANKA AT LEAST UNTIL AUGUST. LISTEN FOR HIM TRANSMITTING ON 1827 KHZ, QSX 1828, FRIDAY AND SATURDAY NIGHT DURING JULY.

CYPRUS, 5B. MICHAEL, DL5MX, WILL SIGN 5B4/DL5MX ON 160 THROUGH 10 METERS JULY 18 TO AUGUST 1. QSL VIA DL5MX.

TOGO, 5V. ROGER, G3SXW, AND OTHERS ARE PLANNING AN OPERATION FROM HERE DURING THE CQ WW CW CONTEST.

WESTERN SAMOA, 5W. PERRY, WH6XY, IS QRV FOR A YEAR AS 5W1PC.

NEPAL, 9N. LAST CHANCE FOR BRAD, KV5V, AND XYL KB5KVV, AS THEY WILL WRAP UP THEIR OPERATION JUNE 30. R 14018 KHZ CW, 14068 KHZ RTTY.

CROZET ISLAND, FT. SAM, FT5WE, IS QRV AGAIN AFTER BEING OFF THE AIR FOR ANTENNA WORK. HE PLANS SOME 75 METER SSB BUT PREFERS 7045 KHZ SSB OR CW 5 KHZ UP FROM THE BOTTOM OF THE BANDS. TRY 3505 KHZ AT 1400Z OR 10108 KHZ. QSL VIA F5GTW.

ASCENSION ISLAND, ZD8. JIM, N6TJ, IS MAKING YET ANOTHER TRIP AND WILL BE RV AS ZD8Z JULY 9 TO 17. HE WILL OPERATE CW AND SSB, ALL BANDS. QSL VIA VE3HO.

GUERNSEY, GU. LISTEN FOR GU6D BY G3KHZ, G3SJJ AND G3TMA JULY 27 AND 28. THEY MAY SIGN GU3KHZ, GU3SJJ AND GU3TMA,

RESPECTIVELY, AFTER THEIR GU6D STINT IN THE IOTA CONTEST. QSL VIA G3SJJ.

GUANTANAMO BAY, KG4. BILL, KQ4GC, WILL OPERATE SSB AND RTTY AS KG4GC JULY 12 TO 18. QSL VIA KQ4GC WITH SASE.

IOTA, GRID SQUARE, AND COUNTY HUNTERS NOTE. RANDY, KD8JN, WILL BE ON HATTERAS ISLAND, NA-067, GRID FM-25, DARE COUNTY, JULY 13 TO 20, SIGNING KD8JN/4, PRIMARILY ON SSB, ITH CW ON REQUEST. HE WILL B ON ALL BANDS EXCEPT 160 METERS. QSL VIA KD8JN WITH SASE, ONE IRC FOR DX.

A.N.A.R.T.S. News Bulletin 917 14th JULY 1996

COLS COLUMN

RONALDS TELEGRAPH (CONTINUED)

A FRICTIONAL ELECTRICAL MACHINE (STATIC ELECTRICITY) WAS USED
AS A POWER SOURCE AND A CLOCK WAS PROVIDED AT EACH END OF THE
COMMUNICATING LINE. EACH CLOCK HAD A SPINDLE WHICH ROTATED
ONCE PER MINUTE. CLOCKWORK DOES NOT TURN AT A SMOOTH EVEN
RATE. YOU CAN SEE THIS LOOKING AT THE SECOND HAND OF A
CLOCKWORK WATCH. THE HAND MOVES IN A SERIES OF TINY JERKS,
FIVE PER SECOND IN A MODERN WATCH, WITH A TINY PAUSE BETWEEN
EACH MOVEMENT. THE SPINDLE OF RONALDS CLOCK MOVED ONCE PER
SECOND, GIVING AN APPRECIABLE PAUSE BETWEEN EACH MOVEMENT.

EACH CLOCK HAD A CIRCULAR BRASS DIAL FIXED TO THE SPINDLE AND
ROTATED WITH THE SPINDLE. AROUND THE DIAL WERE ENGRAVED TWENTY
LETTER OF THE ALPHABET AND BELOW THE ALPHABET THE NUMBERS 1 TO
10. IN FRONT OF THIS DIAL WAS A FIXED APERTURE PLATE ALLOWING
1 LETTER AND 1 NUMBER TO APPEAR THROUGH THE APERTURE AT ANY
GIVEN INSTANT. THE CLOCKS ?BEAT DEAD SECONDS?, SO THERE WAS
PLENTY OF TIME TO RECOGNISE THE LETTER OR NUMBER.

EACH END OF THE COMMUNICATING WIRE WAS EQUIPPED WITH A 'PITH BALL ELECTROSCOPE', THAT IS A PAIR OF PITH BALLS SUSPENDED BY A FEW INCHES OF THREAD. WHEN THE WIRE WAS ELECTRIFIED BY CONTACT WITH THE 'LIVE' CONDUCTOR OF THE FRICTIONAL MACHINE, THE PITH BALLS RECEIVED PART OF THE CHARGE AND REPELLED EACH OTHER, STANDING APART AND SO INDICATING TO THE RECEIVING OPERATOR THAT THE WIRE WAS IN A CHARGED CONDITION DURING AN ENTIRE MESSAGE EXCEPT FOR MOMENTARY DISCHARGES TO INDICATE EACH CHARACTER AS WILL BE DESCRIBED.

TO SEND A MESSAGE BOTH CLOCKS WERE SET GOING AND SYNCHRONISED BY A SPECIAL LETTER SIGNAL. THIS SIGNAL WAS MADE WHEN THE LETTER 'A' APPEARED IN THE SENDERS APERTURE. THE STATIONARY APERTURE PLATE COULD BE MOVED BY HAND, SO AT THE RECEIVING END, IF THE LETTER 'A' DID NOT APPEAR ON THE APPROPRIATE SIGNAL THE PLATE COULD BE ROTATED THE REQUIRED AMOUNT CLOCKWISE OR ANTI-CLOCKWISE UNTIL THE 'A' APPEARED.

BOTH SEND AND RECEIVE STATIONS WERE NOW SYNCHRONISED. SOME STOPWATCHES ARE SIMILARLY SYNCHRONISED BY MANUAL ROTATION OF THE ENGRAVED DIAL. TO TRANSMIT A LETTER THE SEND WAITED UNTIL THE DESIRED LETTER APPEARED AND MOMENTARILY DISCHARGED THE LINE. THE RECEIVE OPERATOR SIMPLY WATCHED THE LETTERS SUCCESSIVELY APPEARING BEFORE HIM IN HIS APERTURE PLATE AND NOTED SOWN THE LETTER VISIBLE EACH TIME THE PITH BALL ELECTROMETER INDICATED 'NO CHARGE'.

MORE NEXT WEEK

.S. If you have sent me a packet recently and have had no reply it is probably because I have had problems with my bbs. it has been on and off air like a yoyo recently and is now completely off the air. I have changed bbs to vk2wi, so if you could repeat any packets I will now receive them. 73s col

---

Hey Macquarie hunters!
I just got a message from Warren, VK0WH. He announced to be QRT for the next 2 or 3 weeks due to antenna problems. The extreme weather conditions on Macquarie Island and salty water cause a strong corrosion of his antennas. Due to short days during antarctic winter season it will take 2 or 3 weeks for him to repair what has been destroyed. After this delay you can meet him again on the already published frequencies.

Best 73, Dominik DL5EBE/JW0K

WEEKLY SOLAR AND GEOPHYSICAL REPORT

(05 JULY - 11 JULY)

ISSUED ON 12 JULY 1996

SUMMARY

Date 05 06 07 08 09 10 11
10cm 69 68 72 82 84 80 77
A 12 6 12 12 5 4 (5 ESTIMATED)
T 16 12 12 10 15 9 9

SOLAR ACTIVITY WAS VERY LOW 5TH TO 7TH JULY; LOW ON 8TH; HIGH ON 9TH, WITH AN X2 AND AN M1 FLARE; MODERATE ON 10TH WITH ANOTHER M1 FLARE, AND LOW ON 11TH.

THE GEOMAGNETIC FIELD AT LEARMONTH W.A. WAS QUIET, OR QUIET TO UNSETTLED THROUGHOUT THE PERIOD.

MAXIMUM USABLE FREQUENCIES AT SYDNEY WERE NEAR PREDICTED VALUES EXCEPT FOR ENHAMCEMENTS OF 15 TO 30 PER CENT ON 11TH JULY. SHORT WAVE FADEOUTS WERE OBSERVED ASSOCIATED WITH BOTH M1 FLARES. SPREAD F WAS OBSERVED DURING LOCAL NIGHT ON 9TH TO 11TH, AND THERE WAS OCCASIONAL SPORADIC E LAYER DURING LOCAL NIGHT ON 9TH.

FORECAST (12 JULY - 18 JULY)

SOLAR: LOW

GEOMAGNETIC: POSSIBLE ACTIVE CONDITIONS FOR 1 TO 2 DAYS FROM AROUND 1200 UT ON 12 JULY, OTHERWISDE MAINLY
QUIET.

FREQUENCIES: NEAR PREDICTED MONTHLY VALUES

ARRL DX Bulletin
>From ARRL Headquarters
Newington CT July 5, 1996
To all radio amateurs

This week's bulletin was made possible with info provided by Tedd, KB8NW, The OPDX Bulletin, DXNS, 425 DX News, The Yankee Clipper Contest Club Packetcluster network and Contest Corral from QST. Thanks to all.

MADAGASCAR, 5R8. Gerard, F2JD/5R8EN, is expected to be active from Nosy Be Island, IOTA AF-57, until July 7 or 8 as 5R8EN/P. He will operate SSB and CW during free time. QSL via F6AJA.

OMAN, A4. Chris, G3VUO, is currently on Masirah Island, AS-014, and has obtained the call sign A45XL. He should be up and running very soon. This Omani Island is located in the Arabian Sea Coast North Group.

FAROE ISLANDS, OY. Ingo, OY/SM0DSF, will be active until July 6. QSL via home call or the bureau. Greg, SQ6CWP, and Mario, SP6OJG, will be active on SSB and CW, as OY/SM6RXS until July 9. QSL via SM6RXS.

WESTERN SAMOA, 5W. Perry, WH6XY, will be active for a year as 5W1PC. He has been on 14226 khz between 0130 and 0300Z.

UK SOVEREIGN BASE, ZC4. PA0ERA and PA2HJS should be active until July 20 as ZC4EKJ, with emphasis on 6 meters.

ASCENSION ISLAND, ZD8. Jim, N6TJ, will sign ZD8Z July 9 to 17 on CW and SSB. He will participate in the IARU HF Championship. QSL via VE3HO.

ROTUMA ISLAND, 3D2. Antoine, 3D2AG, is planning a one month DXpedition for August. He will be on 80 through 10 meter CW and RTTY signing 3D2AG/P. QSL direct to his CBA.

CAPE VERDE, D4. Veronica, IK3VAW, will be QRV for several weeks starting July 21 on all bands, mostly SSB. Check 14240 khz. No call sign was available at bulletin deadline. QSL via IK3VAW.

CROZET, FT5. Samuel, FT5WE, will be active in the IOTA Contest, probably using the call sign of compatriot FT5WF.

COMING EVENTS

JULY 13TH-14TH BARTG AMTOR/PACTOR

AUGUST 17TH-18TH SARTG WW RTTY

SEPTEMBER 28TH-29TH CQ/DJ WW DIGITAL

OCTOBER 19TH-20TH JARTS WW RTTY

TELETYPE BOOKS FOR DISPOSAL.

I HAVE FOR FREE DISPOSAL THE FOLLOWING RTTY MECHANICAL MACHINE TECHNICAL INFORMATION :

3 BOOKS :

TELEPRINTER MODEL 100 PAGEPRINTER. (MAINTENANCE AND ADJUSTMENTS).

TELEPRINTER MODEL 100 TAPETRANSMITTER ATTACHMENT.(MAINTENANCE AND ADJUSTMENTS).

TELEPRINTER MODEL 100 REPERFORATOR ATTACHMENT. (MAINTENANCE AND ADJUSTMENTS)

3 PHOTO COPIED PAMPHLETS :

TELEPRINTER MODEL 100 LOCAL CARRIAGE RETURN AND LINE FEED ATTACHMENT. (FITTING AND REMOVAL PRACTICE).

TELEPRINTER MODEL 100 LOCAL CARRIAGE RETURN AND LINE FEED ATTACHMENT. (MAINTENANCE AND ADJUSTMENTS).

MODEL 15 TELETYPE - DESCRIPTION. (HAS GOOD GRAPHICS OF MOST WORKING PARTS, VERY USEFUL FOR MAINTAINING A MODEL 15).

THESE ITEMS ARE OFFERED FREE OF CHARGE TO ANYONE WHO STILL
USES MECHANICAL TELEPRINTERS OR MAYBE SOMEONE WHO HAS A
GENUINE INTEREST IN THE SUBJECT. THEY ARE ALL IN FAIRLY
GOOD CONDITION THOUGH THE FIRST NAMED HAS A WELL USED
COVER. OTHER THAN THAT THEY ARE QUITE READABLE. IF YOU WANT
THIS MATERIAL FOR THE PRICE OF THE POSTAGE PLEASE CONTACT ME
COL VK2CTD AT VK2DAA OR EMAIL COLIN.DAVIES(AT)DSE.COM.AU

Every heard of "fox-hunting" or "transmitter-hunting". Lots of folks do it that I know...

You just have to be patient, and give the guy a little bit of rope... eventually he'll hang himself. There are several different "blueprints" on how to build an attenuater to help locate a signal... QST had one not too long ago I think. I'm sure there are some on different web pages. I'll keep my eyes open for one and mail you the results if I see it.

Good luck,

Kenny

What a wonderful idea. I was first licensed back in the 60s as WN4MPD later upgraded to technician as WA4MPD. My first receiver was a Knight Star Roamer I built from a kit. Also put together a Heath Sixer. My first six meter QSO was from Atlanta to West Palm Beach, Florida. Hey I thought this stuff was good. The next day after school I found out what skip was. Couldn't get West Palm Beach any more.....

Built a couple of six meter AM mobile rigs, WITH TUBES....remember fast heating filaments?

Ever hear of a military surplus receiver, RAL-7? Pretty good super regen with external power supply that had a ballast tube. Great heater for winter time operations.

Six meter quads were the antennas to build.

Held an additional station license while in Hawaii, KH6HCR. The FCC later changed the rules so that you could only hold one license so I dropped the WA4MPD and kept the KH6HCR. When I upgrade to Advanced Class I didn't want an AH6** call so I kept the KH6HCR. When I moved back to Atlanta I applied for a call sign change at received KD4RG. Now with Vanity Licensing I applied and have received my old WA4MPD. I guess I really should get back on the air.

Let me know when the Old Timers Group gets started.

73's de WA4MPD

Steve

If you want to get a really old and exclusive call sign try KN6*** series.
They were first issued in the 50's and the series is largely ignored. Lot's of
them are available !!!!

If memory serves me right... 2X2 calls for advanced class came in with the
shifrt to the new incentive structure in the early 70's.

Source record: 220917

The best is surely out there..! It's LogSat for Windows. Check out the home page at http://www.logsat.com You can download a demo or order the software online.

You can track all the satellites you want in a single windows, and furthermore you can open as many windows as you want at the same time. It uses the KCT to interface with the rotor. There's a kazillion of other features, but the best description can be seen on the home page. There you'll also find fresh keps, separated by satellite type (amateur, weather, visible etc.), and moon keps for EME.

Can anybody explain to me, why when we wish to reply to a msg in which several other replies have been entered into the msg and we wish to retain the other responses as well as reply, we always get an error refusing to accept the reply and it says "unable to post msg due to more added text than new!" or something like that, so we gotta go delete line by line a whole bunch of info in order for it finally to accept our reply???. There must be someway around that so can maintain the continuity of the entire original post and replies all together.!!

The JPS AN-4 works against this type of noise.

Hi Charles,

Yep, that's absolutely correct. But, the autopatch "sponsor" (whether
club or individual owned) may impose "stricter requirements" on the users
of the system and ask that business-like calls not be made. However, I
think that the call for a tow-truck is better perceived as emergency type
communications (for the safety of those stranded).

You can call and order a pizza, but you can't allow your repeater to
transmit a "ring" to signify an incoming "reverse autopatch"....
Go figure...

Best regards,
Stan/KD9BE

You might also want to worry about a potential health risk. The DSP
unit will help with the noise though.

I know this is slightly off of topic, but are there any computer oriented celestial navigation training programs available for computers ? I've always been curious as to how exactly a sextant works, and what to be able to spot. Never know, it might come in handy, along with amateur operator skills, etc. If there's another newsgroup specifically for this, could someone point me in the right direction ? In fact, anything available on navigation, and plotting etc would be of interest. BTW, sorry about the off topic post, and thanks in advance.

I just took the no-code test a short time ago (two months) and yes
you can order pizza or anything else as long as the ham's business or
employer does not benefit. I also believe this is a recent change.

I'm looking to develop a Lab that I can use to teach communication principles, (preferably FM/FSK) It's important that parts be readily available (ie. no expensive/special crystals) and it should have the ability to tx/rx about 50 feet simplicity is also a concern.

While I have some Ideas of my own .. I'm interested to see what other people have used or know about, maybe you know a chip manufacture that has just come out with just such a thing on a single chip?

if you can indicate complete system cost, it's helpful.

thanks

Doug Kenny

Common sense would dictate that if one is ordering a good or service which
any other citizen might require from day to day, then the order is not
considered business.

If on the other hand, one orders a good or service specific to that
individual like making landscaping quotes, then that is considered business

Oh, that's just *great* Drew. Trespassing and property damage...

Why not just ring the doorbell and *talk* to them about it first?
Just the fact that they can't jam you without being found and traced
should scare some sense into them if they're doing it on purpose.

Besides, for all you know, it may be some ham's *kid* playing with
the rig in which case the ham would *much* rather you LET THEM KNOW
than stick a pin through his coax!

Agreed, and agreed. Car electrical systems present extreme conditions.
There are a number of published specifications for the degree of
suppression recommended for mobile appliances. A bit of web browsing
should turn them up. As i recall using a clipping type transient
suppression device requires that the device handle incredible energy
levels. A bit of series impedance (like a choke) is recommended. No
since in trying to clean the whole system up via your device!

I have a question: The car battery clearly presents a low impedance
for starting and other low frequency loads. Anyone know how a typical
lead-acid battery looks at higher frequencies? Does connecting radios
to the battery provide any measurable suppression for things like
start-motor turn-off kicks? It would be interesting to see a plot of a
typical battery impedance vs. frequency.....

Oh Gawd, what have I started.

: So, too, is the loud 50 Hz hum on the signal which is attributable to
: the directly-heated PT15 valves in the final.

: Quite right, Ian ... it all lends character and should be carefully
: preserved!

An interesting point which I would like some discussion on. I am modifying the PSU, of which I have two, one in original nick and one to carve about, in order to get a set that can be used on the air. Now, I am faced with a dilemma which I don't have an answer for, I would just like some opinions from those who have been in the same position.

The dilemma is this:

1) I have components that have, or are going, phut. I cannot replace them with the originals as they are not available.

2) I am not interested in a pretty thing that sits on a rack and is dead, i.e., it is never used.

3) The original design itself is flawed as are many of the methods used to use the system outside of its original location. The supplies used were of substantially better current delivering capability than the bench test ones that I have, although the originals.

4) Many of the percieved "weaknesses" of the system, i.e., chirp and mains hum are due to the psu used. The original ones, and my bench ones for that matter, use DC feeds for the heaters, this is what the 1154/1155 set up was designed to take, unlike many of the Amateur rigs built to drive them in the 50s and 60s. As a result, a proper setup would not exhibit 50Hz hum. The chirp occurs because the MO stage is not separately regulated and relies on the regulation provided by the PSU, therefore unless the PSU can support 1.2kV at 20mA and then 200mA with good regulation the set will chirp.

5) The RAF didn't think an original design was sacred, the list of mods to the 1154 is longer than my waist band and some of them

are quite major, just to stop the thing going bang.

My answer to the problem is thus:

As far as possible don't change anything in the sets them selves. Unless you have to replace a component that you can't get anymore. Don't carve the circuit about and only replace what you have to. If elements in the PSUs go down then replace them in the same vein as above. I can't get, nor do I want, metal rectifiers. Silicon is much better but has a much larger - sorry slip of the brain - lower voltage drop. This can be solved with resistors but I have a widely varying load so a regulator is the answer. In this case I will remove as little of the original PSU as possible and fit the regulator in the space provided. Thus maintaining the external appearance of the PSU whilst, I hope, massivly improving its performance.

Now, I don't know if this is crazy, sensible or stupid. I would welcome criticism, even from Walt :-), but constructive please. I would like especially to hear from those who are in the restoration business. I am trying to avoid - I have my grandfathers axe, my father replaced the shaft and I replaced the head - whilst keeping a live useable system.

73, cheers

Robin

nick@innage.demon.co.uk (Nick Grose) wrote:

>You do need a licence to listen to Radio 4.

You have not needed a licence to listen to broadcast radio (sound only) in the UK for over 20 years. The Government did away with wireless licences because it was costing more than the amount of the licence fee to collect the money.

As well as broadcasts, you may also listen to Amateur Radio, CB and standard frequency transmissions without a licence.

Extract from Radiocommunications Agency Pamphlet RA 169:

"Anyone planning to listen to radio transmissions should be aware of the following: No Licence is required to use a radio receiver, provided it is not capable of transmitting. However, it must only be used for receiving the transmissions meant for general reception, such as authorised sound broadcasts, messages sent by radio amateurs and Citizens' Band Radio ....."

Interestingly, for a receiver to be exempt from the requirement for a licence [Wireless Telegraphy Apparatus (Receivers) (Exemption) Regulations 1989 - Statutory Instrument 1989 No. 123], it MUST be "inherently incapable of transmission". This means it is not legal for a person to buy an amateur radio transceiver and "use it for receiving only" until such time as they obtain their amateur transmitting licence!

Not many people know that. ;-)

Hello to all,

The Boston Amateur Radio Club and the Waltham Amateur Radio Association in
cooperation with the Northeastern University Amateur Radio Club is
sponsoring a SKYWARN Training Session. Here are the details:

When: Saturday July 27, 1996 Noon-4 PM.

Where: Snell Engineering Room 108 on the campus of Northeastern University,
by Ruggles Station on the Orange Line MBTA and off Huntington Ave. Line.
Plenty of Parking.

Talk-in: On the 145.23 Boston Repeater.

The training session offers weather spotters whether they are hams or not an
opportunity to be trained on severe thunderstorms and tornadoes. It will
teach spotters how to depict potential severe weather through various cloud
formations as well as to show spotters what to report and what not to report
to NWS and what reports are deemed severe by National Weather Service criteria.

Interested people can contact the following people:

KD1CY-Rob Macedo
SKYWARN Training Coordinator
Greater New Bedford ARES Emergency Coordinator
Work Phone: (508) 435-1000 Any time after 3 PM.
Home Phone: (508) 994-1875 Any time before 2 PM.
Internet EMAIL: macedo@ici.net
Packet EMAIL: KD1CY @ AA1FS

N1VUX-Bill Ricker
Email Address: wdr@avicenna.com or wdr@world.std.com

Pre-registration is NOT required, however, if you know ahead of time that
you would like to attend please let Bill or I know.

I hope this to be a VERY SUCCESSFUL Training Session.

73,Rob-KD1CY.

> spend money at a business.

Yes the rules HAVE been changed since the RS book was published...

as long as the control op of the station making the call does not profit
from the call in ANY way (calling your business for ANY reason is one),
you can call businesses and conduct personal business (such as ordering
pizza, making reservations, etc)....
NOW the rptr trustee/control op can make other rules that are more strict
than what the FCC allows...
so the local club may NOT allow such calls...even though the FCC does

Macintosh users also want to know what they can use for RTTY
and morse applications through their sound ports. Any pointers?

Hi Mike,

Equally as interesting is what method could they have used to record
the amateur activity? I know that 78 RPM records were in wide use,
but I wonder how many hams had access to equipment that could cut
a 78 RPM record? Does anybody know if there were other methods
of recording sound that was in use between 1914 and 1925? These
were the days before sound on film, wire recording and tape recording
was invented. Equipment to record to disc was probably not cheap
or in common use in people's homes. I would guess that the only
place you could record sound was in a recording studio, so unless
some of the early hams decided to purposely document ham radio's
early days, these sounds are lost forever! (Unless you lived on a planet
that was 80 light years away and had a sensitive receiver! Hi-Hi)

73 de WA3RVT, Steve

P.S. Good post, by the way. I would be extremely interested too!

In a local thrift chop I found a "radio station" record (direct to
disk recording) of the banquet and entertainment associated with an
ARRL convention in Seattle sometime in the early fifties.

Does that count as an "ancient amateur recording"?

Hi Steve,

There are no Q codes for sideband. It is not considered proper
procedure to use Q codes on sideband.

The Q codes are intended for use on CW and some of the digital modes.

steve.lee@nashville.com (Steve Lee) wrote:

:Could someone post a list of the Q codes used to communicate on

The "boatanchors" e-mail list was started almost 4 years ago for
the discussion of homebrew and commercial tube ham gear from the
40's and 50's. It grew like crazy to almost 1000 people and really
overloaded the volunteers who were maintaining the list. So it changed
to a subscription format ($12/year) to help pay the costs and currently
has about 500 members. It is a great gang of people - and there are
plenty of ARC-5 fans amongst the group.

There is also a smaller "glowbugs" list (free) strictly related to
homebrew tube gear - one-tube transmitters, regen rcvrs, you name it.

There are also a whole host of World Wide Web sites with info and
pictures of vintage gear.

To get a free trial subscription to "boatanchors" send e-mail to
listproc@theporch.com saying:
subscribe boatanchors your-name-here

To get a free subscription to "glowbugs" send e-mail to
listproc@theporch.com saying:
subscribe glowbugs your-name-here

To start exploring WWW sites (including "boatanchors" archives)
try http://www.mindspring.com/~johnmb/

and stay tuned to the newsgroups - there is a new proposal to
establish rec.radio.amateur.boatanchors as an official newsgroup.

Have fun & 73,
Nick KD4CPL (was KN4NYW in 1961)

After 4 very happy years in the Dominican Republic, I'm moving back to the USA. I'll be in the Northern Virginia/Washington D.C. area after 29 July.

Thanks to all for the many happy QSO's on many different modes and frequencies. Whether it was with the QRP rigs, the beloved Boatanchors, RS-12/RS-10/RS-15 or (lately) Internet Phone, I've really enjoyed it!

I tried my best to keep the QSL's flowing. Special thanks to the fine folks at the W2 QSL bureau and at the ARRL's outgoing QSL service. If I missed anyone, drop me a note at my Call Book address.

They are coming to pack up the computer today, so I'll be off the net for a while. I should be on-line with a laptop in a few weeks. Send e-mail to 74537.1100@compuserve.com

Uplink (MHz) 145.858 - 145.898 USB/CW
1
Downlink (MHz) 29.354 - 29.394
Type Mode A

Notes:

1) Frequenices are shown without Doppler compensation. At start of typical LEO pass,the original signal will be several kHz higher than shown.Refer to specfic satellite operating instructions for complete details.
2) For AO-10 and AO-13 Mode B, transmit in LSB, receive in USB. Also in Mode B, when the transmitted frequency is increased the received frequency will decease (inverting transponder). AO-10 is no longer controllable but the transponder works when the satellite is in sunlight.
3) AO-10 beacon is an unmodulated carrier. DO not transmit to the satellite if the beacon is FMing.
4) AO-13 beacon sends CW at the beginnig of the hour, RTTY at 67 wpm at 15 and 45 minutes past the hour, and 400 bps rest of the time.
5) Presently, FO-20 digital JD mode is not operational.
6) RS-10 Robot via 145.820 MHz uplink and 29.403 downlink.
7) RS-12 Robot via 21.129 MHz uplink and 29.454 MHz downlink
10) JAS-2 Launch scheduled for August 17, 1996. For additional details, refer to JAS-2 article in the Sept/Oct 1995 issue of the AMSAT Journal.

Info from the July/August AMSAT Journal and retyped by N1HID.....

Try using a magnetic loop antenna for receiving (or for both, rx and tx).
Noise from a near-by power line mostly consists of electrical fields while
mags only receive magnetic fields.

Hello and thanks for reading my message.

I want to buy a new rig, and because they're a much cheaper
in the US then here in europe I want to buy one in the states.
Now there is still one problem..., I don't know if have
to pay taxes when I bring the equipment in Belgium.

Are there people on the net with the "right" experience on
how to import electronic equipment on a way I don't have to pay
any taxexs.....

Please let me know
Thanks in advance and 73's de Franky ON1BP QTH AALTER, BELGUIM (JO11RB)

Yes I remember those days very well! My first receiver was part of rx/tx combo - the BC-474A trunk-like radio that was water-tight - that I somehow blew out all the filaments. After that I got my first ARC-5 rx that tuned 3-6MHz. I used an insulated wire that I poked down inside one of the IF cans and tuned a regular BC band radio to 1415KHz (or thereabouts) for a multi-conversion radio.

I also used my ARC-5 tx as a novice (with VFO) with well regulated supplies and kept the unit on 24 hrs-a-day to prevent drifting.

Moved it all into the car as a mobile and had great times there too. Ran DSB-SC in the early days of SSB and it worked great! I loved those days and hardly ever came out of the basement.

Too bad there is not the same level of tinkering today by the young folks cuz the lack of REAL commitment to learning and experimenting will be the nail-in-the-coffin for this hobby.

Hi Dick, please don't blame the "young folks". Here's my take on what's happening. In the '60s, I was a digital design expert using discrete components. I am no longer a digital design expert because I don't know how to design chips. My 10 component flip-flop is obsolete. If you will think about it, I believe you will conclude that the design knowledge and tools that you remember so fondly are obsolete because we and the "young folks" cannot compete with the chip designers. It doesn't make sense to design and build an expensive, obsolete 6 tube receiver when you can buy a chip that does the job better.

The "young folks" here at Intel are so much more knowledgable than I was at their age that it is scarey.

DISCLAIMER...this is the mostly fictional account of what
happens when a woman gets involved with a married man.
You can write to the slut at nep107@freenet.mb.ca
Mikey says she likes it hard and rough.

You are such a pathetic creature already and when I'm done with you there won't be much for Mike to lust. You are going to hang from ropes tied to your wrists. I'll leave you alone in the dark to think about what got you here as your mind slips ever closer to total madness. When I return you promise to do anything if only I will release you. You don't get it yet, you stupid bitch. I'm going to do what I want to you and not even your precious Mike can stop me. Eventually your arms will pull out of the shoulder sockets and the rest of your torment begins. A whip cuts into your back until steady streams of blood are flowing down your body. Go ahead and scream. No one can hear you and your agony turns me on. Soon the whip hits more sensitive parts of your lovely body. Any time you pass out you are revived with a jolt from an electric cattle prod shoved up your cunt. I'll hold a branding iron inches from your face so you can read your new label - Mike Urso's Slut. I wish he could be here to see the terror in your eyes and to smell the burning flesh as I press the hot metal against your stomach. I'll use my knife to cut little x's all over your face and tits. When you have properly admired my artwork I'll gouge out your eyes with the knife. I'm going to bite your nipples and tear them away from your body. You are hardly even human any more. Just a piece of meat hanging from the rafters. I'll fuck you in the ass one more time and when I'm done I'll crush my burning cigarette against your clit. When I cut the rope you fall to a heap on the floor. Before I leave I piss on your face and give you one last kick on my way out. I wonder what Mike will think of his beautiful vital woman when he finds the mass of blood and bones.

Not only is it sensible .... in my opinion it is the only feasible solution!

Beware of ancient electrolytic capacitors ... they tend to go BANG without warning (and the higher the voltage, the louder the bang!) If they do explode, they can do a lot of damage to other, nearby components.

It is possible to run the filaments of the PT15s on AC without hum, if you use a centre-tapped transformer and a suitable RF decoupling network. However, your plan to use DC for the filaments, as originally intended, is a better one. Just make sure it is adequately smoothed DC - bearing in mind the fairly high current which the filaments will draw. (I believe in the original aircraft installation, the filaments were powered from the aircraft's lead-acid battery!)

To alleviate the chirp problem, could you not completely separate the HT supply for the PA from that for the preceding stages? I.e. use two entirely separate power supplies. You could also modify the keying circuitry to achieve better keying characteristics. (Where is the key connected in the original circuit? I can't remember.) Perhaps you could employ some form of grid-block or clamp-tube keying in the PA stage ... something which wouldn't drastically alter the loading on the driver/MO stages when you toggle between key-up and key-down.

I believe Joe Walsh's call is WB6ACU. Also, if I remember correctly
the Iron Butterfly had "I love you" in morse code as the rythm for
one of their early songs. Of course it was so slow as to be almost
unrecognizable.

Don't worry from that standpoint (in so far as I am concerned). I am a
former 11 meter op who got out of that bad news almost 4 years ago. I
know the feeling when it comes to CB. Too many "bucket mouths" and not
enough common sense. The most unfortunate point of all this is that
the nitwits are generally the most vocal.

Well I recall the old days on Cape Cod when I was a kid in the 60s with my old Halicrafters S120 general coverage receiver. I used to hear both the phone and cw transmissions of the trawlers. I recall that although I couldn't understand what was being sent, a friend of mine told me he was certain they were Russians, and yes their fists were fantastic.

> authorised sound broadcasts, messages sent by radio amateurs and
> Citizens' Band Radio ....."

It is refreshing to see the exact language of the regulation in place
of paraphrases and interpretations.

Some while back there was a discussion on whether reception of GPS
was authorised, and then this discussion degenerated into whether GPS
might be allowed as perhaps a standard frequency transmission. Now
Walt's quote make clear that this standard frequency reference was
simply a part of a list of examples of transmissions meant for
general reception, and was never a part of any exclusive list. So
clearly GPS is allowed simply because it is intended for
general reception. Since it is not a sound broadcast, it does not
even need to be authorised. Pirate GPS next?

Yup, I'm still harping (i.e. not ashamed to find the rules
interesting) and happy.

If two whimsical comments by two individuals is sufficient to change
your mind about amateur radio as a hobby, I agree that you will
probably not be well suited to it. Perhaps take up something like
stamp collecting, where you won't need to learn how to interact with
other human beings, even [horror!] those who don't agree with you.

>73 de WA3RVT, Steve

In the teens and twenties, there were still many many Edison phonographs
around. These used wax cylinders, and could record as well as play.
I wouldn't be surprised to find that an amateur had used one of these
to record some of his contacts. (A friend of mine still has one of these,
and even a few blank cylinders that can be used to record.) The only
problem is that because they operate non-electronically, they aren't
very sensitive, so the amateur station would have needed a loudspeaker
to drive one for recording. That was probably rarer than the recording
equipment in the early days.

By the 30s, regular electronic record lathes were available, so 78s
could be cut. These weren't cheap, but because many early hams were
employed by the broadcasting industry, it wouldn't be surprising if
some of those hams hadn't done recordings as well. A station where I
worked in 1963 was still using one of these daily, and I used it to
cut some records of my own. Film sound recorders were another method
that a ham with industry connections might have used in the 30s.

By the late 30s wire recorders had appeared for field recording, but
of course the quality was horrible. Tape was developed by the Germans
during WWII, and brought to the US, and to commercial use, by Ampex
after the war. Many of us cut our recording teeth on an old 300 reel
to reel machine. By the late 50s reel to reel recorders were consumer
equipment (we used them extensively for traffic handling on the KTN
in the 60s).

So for early amateur activity, the most likely recordings would be
on Edison cylinders. By the 30s, recordings could be on 78s, wire,

or film strip. After the war, magnetic reel to reel recordings would be likely to have been made. I know I had a ton of them. Unfortunately, the old acetate base tapes didn't store well, and they're so much confetti now. Edison cylinders keep very well if stored in a cool place (my friend has one that Edison himself recorded that he plays on special occasions), so some of those might still be around. And 78s also keep relatively well (if they haven't been played too many times with a steel needle). Wire recordings are probably gone, if any existed. Just as well, really. They were awful. Old film sound strips might still be around too.

If you don't smoke, you might consider removing the ash tray assembly and installing the TM-742A's control panel there. Mount the main chassis on the rear cab wall behind the driver's seat. As soon as I can find enough time, I plan to do just that in my 1994 Ranger, except that the rig in my case is an Alinco DX-70T hf transceiver.

Message-ID: <4sofpl$1kc@news-2.csn.net>
Source record: 220807
Cross-posted to: rec.radio.amateur.digital.misc,rec.radio.amateur.misc,rec.radio.amateur.equipment

KAWIN NEWS - Introducing KaWin Lite!

KaWin 6.40 is ready for download! Corresponding changes to the help file too. KaWin 6.40's enhancements are directed toward Kpc-3 owners.

The Kpc-3 is a great little TNC for VHF packet with all the benefits of Kantronics Host Mode and more, but it offers neither simultaneous multi-port port operation, nor HF digital modes. Thus, Kpc-3 users only have access to the tip of the KaWin iceberg!

For these users, there is now KaWin Lite registration!

KaWin Lite registration is a special opportunity for owners of the Kantronics Kpc-3 or other Kantronics single port TNCs. With KaWin Lite registration you enjoy all the features and benefits of the full KaWin program, with a very simple limitation:

KaWin Lite registration is ONLY valid when used with one, single-port, Kantronics TNC - such as a Kpc-3. KaWin Lite registration fee is just US$39.

KaWin Lite is NOT a separate program. KaWin Lite registered users use exactly the same KaWin (version 6.40) program, but the KaWin Lite registration will turn off that ugly nag meter just like the full registration as long as these simple conditions are met:

1) Only one TNC is defined in Option/TNCs&Radios,

2) That TNC is the first TNC in the list (TNC 1), and

3) That TNC is configured as type, "All single port".

If you comply with those three simple rules you can enjoy the benefits of KaWin registration at a bargain price. But remember, whenever any of those three conditions are NOT met, KaWin will behave as an unregistered program.

Registered users with KaWin Lite registration who upgrade their systems to a Kam or other dual-port TNC, or who add additional TNCs may upgrade their KaWin Lite registration at any time through a KaWin Upgrade registration.

To add to the KaWin News mailing list, send email to
stan@mutadv.com with the word SUBSCRIBE in the subject line,
or use the handy subscription link on the KaWin Home Page.
To be removed from the list, send email to stan@mutadv.com
with the word UNSUBSCRIBE in the subject line and be sure to
include the email address this message was sent to in the
body. I cannot remove you if I don't know your address!

Does this mean that regenerative and Direct Conversion RXs require a
licence? I can certainly pick up the LO from a DC RX I have on another
RX so I suppose this means it is "capable of transmitting".

I can't speak to a new Ranger directly, but in my '93 F150, I mounted the control head just below the broadcast radio, on a piece of removable, replaceable trim. On the other hand, I now have 150Amp service inside the cab, so it's not likely to stay that reversible for long.

Uh, well, I'm not an OLD TIMER but I try to appreciate our history...

>Does anyone remember a
>"cat's whisker",

A springy wire which touches a crystal to make a detector. A key part
of the simplest home-made radios for AM broadcast.

>a CK-722

An early germanium transistor by Raytheon. Low performance and fragile
but the first affordable transistor for experimenters. Unusual oval
package with the middle lead off center. Today, excellent silicon
transistors cost less than capacitors.

>a 6L6

A beam tetrode vacuum tube (metal envelope) for audio output. Less
distortion and better sound than power pentodes. In addition to
modulators, some were pressed into service at RF. A glass-envelope
version is still produced and can be purchased in music stores.

> a 1N21

A point-contact diode used for early microwave detectors, especially
radar sets. Consists of a cat's whisker and a crystal inside of a
cartridge which looks like ammo. The suffix letter advanced as more
sensitive units became available over years of production. Obsolete.

> a J-38

A straight key, U. S. military surplus and once the most popular
among hams. Not a shiny showpiece like the Bencher, but good for
serious use. Claims of 30 WPM top speed have been made.

> a geranium [sp] diode

Some types were doped junction power diodes for rectifiers. Those
are now obsolete. The better known detector types consist of cat's
whisker and crystal in a glass bead. Then and now they are used for
AM radio detectors and test instruments such as SWR indicators. New
crystal radio kits often have one of these for reliable operation.

> a 35Z5

An octal-based rectifier tube used in five-tube AM broadcast radios,
the first affordable superhet receivers. The high voltage heaters
connected in series across the 110 volt supply, which could be AC or DC.

Due to the legacy of Edison, some communities had DC supply for lighting.

> a 12SN7

A dual-triode vacuum tube with octal base. Although intended for audio and switching, they also oscillated readily at VHF so hams used them for that. Still sold today in some expensive audiophile gear because they look more impressive than miniature tubes.

> an ARC-5 ?

A military surplus command set radio, to be adapted or used for parts. Symbolic of the post-war military influence on ham radio in general. Many new hams first learned of radios and electronics during WW2, then brought a taste for military-style gear and operation into the ham culture.

> What are these strange terms?

All that stuff happened before I was born but -- I wanna be a certified old fart! Did I pass the exam?

Why worry about it anyway? How often do you actually find a need to use amateur radio to order pizza? I would think that most people, when ordering a pizza, would be close to a phone and amateur autopatches are often half duplex which confuses the hell out of the stupid pizza guys so why would you even bother. But if you must try it, go ahead....if the FCC has a problem with it they'll let you know.

: Absolutely! First, track down the offending station. Then, remove said

: station from the air. A well-placed pin in the coaxial cable does
: wonders!

That seems a bit dangerous.....I know someone who tried that once and
ended up in the hospital with a backside full of buckshot!

5755. Question about weatherfax equipment

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-19 00:00:00 UTC
From: Chris Meijer <C.Z.Meijer@wb.utwente.nl>
Message-ID: <01bb7580.4b344100$18155982@utwbwa04.wa.wb.utwente.nl>
Source record: 220823

Hello all,

I have some questions about weatherfax receptions.
I want to be able to recieve weatherfax images on my sailboat, to do
so I first got myself an installation of the shareware JVFax software.
Secondly I built a simple comparator to digitalise the output of my radio
to the serial port of my computer.
After testing that one with a frequency generator i hooked it up to my
PC and radio and tried to tune into a transmission of a weatherfax to get
it
on screen.

Now, the only thing i see on my screen is a lot of noise. I tried several
frequencies
i got from lists, but i doubt about the quality of my radio.
It is a simple reciever with 9 short wave bands and analog tuning. Maybe
this tuning is
a problem and do i just have to spend more effort in finding the correct
frequency.
My question is, is it possible to recieve those weather fax images with
such a radio?
Or do i really need a more advanced type with single side band option?

I hope some answers will be sent to me, since i am really anxious to get
some results,
even if i have to get another radio...

Chris Meijer

It is unfortunate that your initial exposure to Hams has been negative.
The fact is that you are dealing with people and some aren't so nice. I
was first licensed in 1952. It seems to me that Hams at that time were
more helpful, courteous and well mannered. Yes, there were isolated cases
of jerks on the air then. I have noticed, however, that the number of
jerks on the air have increased over the years. There is always the
option that you don't have to associate with them. There are plenty of
Hams with white hats left. Ham radio has several areas of interest other
than just communicating on the radio. My primary interest in the hobby
was and still is designing and building equipment. I do very little
operating. You need to sort out what area of the hobby interests you and
consider if it offers enough to put up with a few bad apples.

Message-ID: <01bb759e$9519d000$068067ce@miseno.netwide.net>
Source record: 220827

Ciao!

I'll be working in the US for a couple of years, and already obtained a temporary "Reciprocal Permit for Alien Amateur Licensee" (what a name...!) from the FCC.

I've read a couple of messages regarding the possibility to make phone calls using my 2m/70cm handheld, but I'd like to know some details on how to proceed to make the actual phone call, and eventual rules I'll have to follow. The only thing I understood so far is that I can order a pizza (which I like very much! completely different from Italian pizzas, but still good!).

Anyone out here willing to help me out?

Thanks!

Roberto ik8sqi

Q CODES MAY BE USED TO EITHER ASK OR ANSWER A QUERY -- COMMON SENSE PREVAILS --

QRA -- WHAT IS YOUR STATION NAME
QRG -- WHATS MY FREQUENCY
QRH -- DOES MY FREQUENCY VARY
QRI -- HOW IS THE TONE OF MY TX
QRK -- WHAT IS MY READABILITY
QRL -- ARE YOU BUSY
QRM -- IS THERE INTERFERENCE
QRN -- IS THERE STATIC
QRO -- INCREASE POWER
QRP -- DECREASE POWER
QRQ -- SEND FASTER
QRR -- READY FOR AUTOMATIC OPERATION
QRS -- SEND MORE SLOWLY
QRT -- STOP SENDING
QRU -- HAVE NOTHING FOR YOU
QRV -- ARE YOU READY
QRW -- CALLING FOR CALLSIGN ON FREQUENCY
QRX -- WHEN WILL YOU CALL AGAIN
QRY -- WHEN IS IT MY TURN
QRZ -- WHO IS CALLING ME
QSA -- WHAT IS SIGNAL STRENGTH
QSB -- ARE MY SIGNALS FADING
QSK -- CAN YOU HEAR ME BETWEEN YOUR SIGNALS
QSL -- ACKNOWLEDGE RECEIPT
QSM -- REPEAT LAST MESSAGE
QSO -- CAN YOU COMMUNICATE
QSY -- CHANGE FREQUENCY
QTB -- WORD COUNT IS
QTH -- LOCATION OR POSITION IS
QTR -- THE TIME IS
QTX -- STATION WILL BE OPEN UNTIL

MISCELLANEOUS SIGNALS

AA -- ALL AFTER
AB -- ALL BEFORE
ABV -- I REPEAT IN ABBREVIATED FORM
ADS -- ADDRESS
AR -- END OF TRANSMISSION
AS -- WAITING PERIOD
BK -- BREAK
BN -- ALL BETWEEN

C -- YES
CFM -- I CONFIRM
CL -- CLOSING MY STATION
CP -- GENERAL CALL TO MULTIPLE STATIONS
CQ -- GENERAL CALL TO ALL STATIONS
CS -- CALLSIGN
DE -- FROM, AS IN DE KD4ZKW
ER -- HERE
ETA -- ESTIMATED TIME OF ARRIVAL
K -- INVITATION TO TRANSMIT
MN -- MINUTES
MSG -- MESSAGE

This sounds like total Bulls..t unless Michigan has seceded from the union. The last time I heard anything, it was legal to receive just about anything because if they transmitted it, it became public domain. I think the F.C.C. should have something to say about this, unless they have been neutered by government cutbacks. It really sounds like Michigan is abusing its power as a state of the union. I believe this is the same state that made the equally absurd law that one could be sentenced to life in prison for posession of a small quantity of Marijuana. Personally, I won't even travel through the state on vacation. Boycott the damn state and let's see what they think about that!

Yes, indeed. Provided you can prove it's intended for general
reception, you have nothing to worry about!

Even in cases where a radio transmission is NOT intended for general
reception, you're in the clear provided you can demonstrate that you
listened with the permission of the person making the transmission.
(The same pamphlet states, "If you wish to listen in to messages, you
should obtain the permission of the person sending them.")

Clear enough ... isn't it?

Replies that I've received so far indicate that the 2x2 callsigns for hams with Advanced Class licenses were available beginning in 1978.

As I recall, though, the KA prefix for 2x2 was issued only for the first call area. Thus, you would have probably been KB6??.

Hi Cecil !

Tnx for the reply - I agree totally with what you say. Really, we had the best of opportunities in that there was LOTS of INEXPENSIVE surplus stuff available that just begged to be modified and used "on-the-air".

Today most of the rf stuff is so specialized and EXPENSIVE and such a small percentage of the surplus material available that in not mostly a power-supply for a computer or some-such item that is not too useful in rf work.

I'm now looking for some old collins 75S and 32S gear that I can get reasonably cheap to modify for 6-meters. I need some stuff I can easily maintain and modify to provide the performance I require as opposed to an IC-551D, etc that is markedly harder to keep alive!

All of my rf experience has led me the "care-and-feeding" of mfg'g the hp-894xxA series of vector/scalar spectrum analyzers as a pdn-engr here at hp.

Great fun!

The best place to mount the remote head is on the cover of the slide-out
ashtray. Drill holes in the ashtray cover to mount the swivel bracket -
the velcro stuff that comes in the box will not work - it's garbage.

Go down to Ford and buy a new ashtray cover and save it so that when
you sell the car, you can replace the drilled cover.

5770. Announce: AZ_PROJ upgrade and bug fix

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-19 00:00:00 UTC
From: mack@ncifcrf.gov
Message-ID: <DusxKs.MGF@ncifcrf.gov>
Source record: 220838

Announcement: AZ_PROJ v1.03beta
Azimuthal Projection Mapping Software (Postscript)

is available from the AZ_PROJ Map Server Website at

http://www.xray.duke.edu:1080/

or by ftp

ftp://ftp.xray.duke.edu/pub/az_proj

The package can be downloaded as
az_proj.v1.03beta1.tar.gz
or as
azpro103.zip (approx 960kb)

Comments and bug reports are welcome.

AZ_PROJ v1.03beta1 is a beta release upgrade of the AZ_PROJ
package. The major bug of v1.0, where you couldn't send a worked
grids to a postscript printer, before a map file, has been fixed.
As well a few features have been added.

1. Shading of the nighttime zone, when drawing the greyline
2. worked gridsquares can now be selected by propagation mode
(F2, Es, EME, TEP, Aurora, or unknown)
3. qso paths can be drawn for band openings (eg Es). The
intersection of greatcircle lines can be used to show the center
of scattering.
4. DXCC country names can be drawn either around the perimeter
of the map, or at the location of the country

When the bugs have been sorted out, v1.03 will be posted to
the normal ftp archive sites.

General blurb about AZ_PROJ

AZ_PROJ is a collection of postscript files and data
files for generating azimuthal equidistance projections of the earth
from (almost) any point on earth. It can plot color maps of the
surface of the earth on any scale, draw and/or label grid squares,
show worked grid squares on a band(s) of your choice, dxcc
countries (and countries worked an a particular mode, eg CW/SSB),
mountain tops, rovers, repeaters, beacons and can use NMEA input
from a GPS receiver to center the map.

AZ_PROJ can be run on ANY computer (Mac, PC/DOS/Win/DVX, Unix)
and output to a postscript device (printer, ghostscript runing on a
unix or DOS machine with a ghostscript compatible printer, eg
HPcolor inkjets). Ghostscript will also allow display of the maps
on screens.

Although a rudimentary understanding of postscript will
help in running AZ_PROJ, sample .bat files are supplied to make
initial maps and it should be possible to make simple changes to
the az_ini.ps and *.bat files to get the maps you want.

To display the maps on a screen or to use a
non-postscript printer, you should first obtain ghostscript
(available for PC (DOS, Win, DesqViewX) or Unix) from your
favorite ftp site (try ftp.cs.wisc.edu/pub/ghost)

The AZ_PROJ files are GNU copylefted.

Where does it say this? I have called in to my place of employment. Be careful when you say "ANY reason" - 97.113 does not make such a broad prohibition. You cannot make any communications on behalf of your employer - but that does not mean you CAN'T call a business JUST BECAUSE you work there.

I'm rolling over in laughter and great memories....

I still remember when I was a young kid in the mid-fifties riding with one of my mentors, Ben Hall, W9OVL, from Indiana up to Chicago for a 6 Mtr Club of Chicago meeting... old Ben had a Vee antenna for 6 Meters on a 5 foot pole mounted to his back bumper.... and being an older gentleman, always drove about 10 miles slower than the speed limit! That was when radar was just starting to be used (or rumored) to check for speeders.... Ben had at least 20 cars following him all the way to Chicago, not willing to pass, because they thought he had one of those new "radar" devices.... I love it!

SB PROP ARL ARLP029
ARLP029 Propagation de KT7H

Last week's solar flares never caused a big geomagnetic effect. The A index only went up to 10 on July 12. The biggest upset recently was early on July 17 when the K index went to 4 and the A index was 11. This is hardly a disturbance, and is quite common during more active portions of the solar cycle.

Solar flux has backed off from last week and is now below 70 again, with the average down about five points from the week previous.

Solar flux is expected to rise to about 70 around July 26, and peak below 80 around August 2. No geomagnetic disturbances are forecast at this time.

The main band for worldwide communication will be 20 meters over the next month.

Sunspot Numbers for July 11 through 17 were 32, 19, 11, 0, 0, 0 and 0, with a mean of 8.9. 10.7 cm flux was 77, 73.7, 70.2, 67.8, 67, 66.9, and 66.8, with a mean of 69.9.

>jerks on the air have increased over the years.

In the Ward and June Cleaver world of the 1950s, society in general presented a more polite face to the world, and that was reflected in amateur radio as well. In today's NYPD Blue and Cops world, people don't present such a polite face, and that's reflected in amateur radio too. But people are still people. In the 50s, the villains hid behind a veneer of politeness, but they were out there. Today they tend not to hide their true natures as much behind a false front. Perhaps that's better, a truth in packaging if you will.

The false professions of friendship and comaraderie so often heard on the air between chance met strangers is a bit cloying. A bit of false heartiness can act as a social lubricant, but too much of it is deceitful. Many amateurs do enjoy meeting a fellow enthusiast, and do offer help and encouragement. Over time, a genuine friendship might evolve, but your initial contact doesn't make an instant friend. That takes a bit of time. Cookie cutter contacts won't do it.

Some amateurs are just asocial loners prowling the airwaves for their idea of a good time. That might include heckling or belittling others in order to boost their own pitiful self-images. Others may be hate mongers, using amateur radio to push their hidden agendas. Some may call you friend to your face and other things behind your back. You have to learn to deal with that too, in real life, and in what passes for real life on amateur radio.

Amateurs are just people, a cross section of the general society. Some are saints, but most are sinners. As Billy Joel said, sometimes the sinners are much more fun. (Sometimes they're eating people they lure back to their apartments too, you never know.) If everyone acts like they're ODed on Prozac, you may not find out until too late which of those smiling faces hides a knife waiting to be planted in your back.

My, that sounds gloomy. It really isn't that bad. Most people are Ok once you get to know them. Some are *really* worth getting to know, and it would be a pity if you didn't try. Just don't expect *everyone* you meet to be your bosom pal.

>ideas?)

What you're doing is half right, IE wanting to learn the *sound*
of each letter. But the way you're going about it is wrong. You
do *not* want to get involved with the mechanics of dots and dashes.
Don't try to break the letter sounds down to that level. Accept
and recognize each letter sound as an indivisible unit. Each letter
has a unique sound. Concentrate on learning to recognize these sounds.
Don't listen to dots and dashes and then try to translate in your
mind. And for heaven's sake don't try to *generate* the sounds
yourself. That leads you into the mechanics, and you want to
ignore that until you have recognition of the letter sounds down
pat.

Grab a good drill program off the net (SuperMorse and Morse Academy
are popular choices), and *drill* those letter sounds into your
mind. Don't even think about Morse when you aren't hearing those
proper sounds.

A further note, the ARRL test sessions will do the 5 WPM test
with Farnsworth spacing. That means the letter sounds will be
much faster than 5 WPM but there will be long pauses between
letters to yield a composite rate of 5 WPM. Drill the letter
sounds at the rate they'll be sent on the exam. If you practice
real Morse Code with real 5 WPM timing, you'll likely fail the
exam because what they send is something altogether different.
(This has been a source of frustration to a number of applicants
who dutifully learned 5 WPM Morse only to find out that wasn't
what was being used on the test.)

>band option?

I'm afraid you need another radio. To receive FSK (and wefax is an
analog form of FSK with the various grey levels represented by different
frequency shifts), you need a radio with at least a BFO, IE capable
of SSB or CW reception. An AM receiver won't do. Analog tuning is fine,
as long as the bandspread is sufficient, but you do need that capability
to translate frequency shifts into audio tones, and that requires a
product detector (IE a capability to do SSB, CW, and FSK).

Do be wary of digitally tuned radios which have coarse tuning steps. You
need to be able to adjust the tuning at least as finely as 10 Hz steps
to get the grey scale right. Most inexpensive digital consumer shortwave
radios have coarser steps (analog tuning radios don't have this problem
because they have no steps at all, but digitally tuned radios are better
because they allow you to quickly return accurately to a known frequency).
So if you buy a new digital tuning receiver, you will need a higher grade
receiver, one intended for amateur or utility band reception. Some of
these can be fairly expensive.

Note, if you're on an extremely tight budget, you *can* build a product
detector for your current SW radio. It isn't too hard, but isn't really
a project for a total novice unless you have experienced local help and
a detailed internal layout for the existing receiver.

Since you say you own a sailboat, you're either very wealthy or very
broke. :-) So either you can afford a good digital radio, or you'll
have to learn how to modify what you have.

Oh yeah...I almost forgot...DON'T GET CAUGHT!!

If you're stupid enough to get caught, you deserve a "backside full of buckshot."

On the other hand, if you ARE careless enough to be discovered while enroute to the coax and someone takes the liberties of shooting you, you may reap a financial benefit beyond your wildest dreams. With today's joke of a legal system, you would then be able to hire an attorney and file a multi-million dollar lawsuit against the property owners for damages inflicted upon you.

Just make sure it's a nice, big house with a tower and some beams on top. A scummy old trailer with a mag mount stuck on the window air conditioner probably isn't gonna get you much.

>Josh - N3XGR

Josh I have had this problem also. You want to start off by getting a
general location on where the perpetraror is. A good way to do this
is by using a normal beam antenna and turning it till you have the
strongest signal. Than you can actually go "hunting" and find him.

Another way is by using a program known as APRS. It is mainly for
packet reporting of location via GPS, but you can also put in the
locations of 5-6 stations manually (by the street map or a gps) and
tell what height they are on and what their antenna gain is. Then
when the jammer starts up find out his signal report from everyone and
it will give you some intersecting circles. were the circles
intersect is where the jammer is.

Hope this helps,

KBQIR

5783. Andrews 1 5/8 Hardline with connectors swap/ trade ??

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-20 00:00:00 UTC
From: kovar@zeus.ia.net
Message-ID: <4sqt3h$rq1@hera.ia.net>
Source record: 220710

Thanks for all responses on average value of My five spools

of Andrews hardline. length 140 feet to 500 feet.

Here is what I have again:

Andrews 1 5/8 hardline with Andrews connectors on each end.

Andrews cable is LDF-7-50A 50 ohm foam Heliax hardline.

Connectors are Andrews L47PN N style.

With grounding harness, fresh Andrews weather sealent for Connectors,

Stainless tower clamps to hold line.

Here are the Db loss specs per 100 feet from Andrews.

FREQUENCY LOSS
30mhz .12db
100mhz .22db
400mhz .51db
1000mhz .83db

Maxinum Peak Power handling 260 Kilowatts.

Cable is very good to new condition.

A few roles have red/white paint for obvious reasons on 400 foot

towers.

New prices are $10.65 a foot plus $199.50 for each connector.

I would think a fair value would be 1/4 to 1/2 of new.

Used Value = $3 to $5 for line and $50 to $100 for connectors.

Connectors are very easy to change if desired length is needed.

They are like plumbing fixtures with self threading into

copper line.

I would rather SWAP/TRADE for Ham equipment or other hobbies include:

BMW motorcycles: Would like a R65 for wife ect
Bicycling: Looking for cycle trailer to pull Son.
Computers: Using 486-33 with 14.4 modem
Ham Equipment: Anything but tube type considered.
OptoElectronics: Any of their Near field scout,explorer,ect items.

I have donated some of to Needed clubs in emergency services.

Please! No Song and Dance to get some for yourself.

I will provide help to the right need.

Jack
Iowa

>
> K4QXX

My first reaction to your concern was to buy a home in a different location, but you no doubt don't have that option.

The power line here runs along the front of my property. Noise is mainly a problem when the beam, about 150' away, is pointed in that direction. The point here is to select an antenna that is less suseptable to noise (a horizontal, preferably a dipole, instead of a vertical) and orient it so its nulls are directed to the power lines.

You may not have a lot of problems with noise. My experience is that lines that are old have the worst problems, probably due to leakage. Other line noise problems are typically generated by appliances in your neighborhood. Some years ago at a different QTH, a raucous(sp?) noise appeared. It wasn't there all the time, but when it did appear it was on for hours. I used a AM pocket radio tuned off stations and sniffed the power meter boxes on my neighbor's homes. A house next door was loud. I traced the problem to an electric dryer with a bad timer. The timer did not completely open the contacts at the end of a cycle and was arcing. I asked my neighbor to make sure the timer was off when it finished the cycle. That noise was no longer a problem.

It seems that no matter where a Ham lives, there is always something about the location that is less than ideal!

> Bill, bbaka@syix.com

I have heard of state laws about outlawing scanners and wondered how they
can enforce them.

The FCC makes the laws applicable to radio emissions. The last time I
read them they said that radio emissions were public domain, anyone could
listen and the only disclaimer was that you could not divulge
interception of information sensitive to the welfare of the USA. Over the
years those who wanted to keep their emissions private used cryptography
in some form. If the police want privacy, let them do the same. With the
advent of satellite TV, I believe that the FCC has now made it illegal to
intercept emissions for which the provider charges a fee. In any case, I
think that states do not have the right to amend federal laws. As a
private pilot I have seen several similar cases where local governments
have tried to amend the FAA's regulations. In every case the locals lost
the case when the change was challenged in court.

BTW Mr. Baka recieve is spelled RECEIVE.

Mike,

You gotta HEAR the code to advance any further than a mere memorization
of the letters. Code tapes. Listening on the air (novice band).
Actually, a CONTEST is great, inasmuch as lots of people are calling CQ
(you learn those letters super-quick) and the exchange of information is
repetitive and quick (if you sorta know what's coming and it's repeated
often enough, you can decode it). Look in the mags, find a weekend
CW contest, and park your ears in the middle of it. You'll hear lots of
CQs, tons of call letters, and, depending on the contest, some amount
of numbers. Sure, the speeds are horrendous, but if you can discern
the word-spaces, with a knowledge of the "type" of stuff they're sending
you can copy it after a dozen or so repetitions (call letters always
follow the CQ, etc).

At age 13 it took me about 6 months to get to 5wpm, practicing DAILY
with a code practice oscillator (no tape recorder, sending to myself).
It took about 2 months for me to get to 13 wpm from 5, using the above
approach, thanks to the now-defunct Novice Roundup contest. And, back
then we HAD to get to 13 in a year, or we lost the license entirely!!!

Again, the key (no pun) is LISTENING to code actually being sent.

Good luck, Mike!

Gary W2CS

Mike,

I agree whole-heartedly with what Gary Coffman said, but I'll also add my
2-cents worth to it.

* First of all, you're going to need to CONCENTRATE to learn the sounds
of the code. Therefore, find a place devoid of any distractions. In
the beginning, practice no more than 20 minutes at a time. Remember,
these practice sessions are going to require that your energies be
focused. I don't know about you, but this kind of concentration can be
mentally exhausting! Later you can increase your practice time to
30-45 minutes if you wish.

* Don't initially try to learn the ENTIRE code list. Rather, learn 4 or
5 characters at a time. Also, don't learn the code alphabetically,
as this trains the mind to anticipate the next character. For example,
you might wish to select the characters

E I S H 5

When you feel comfortable recognizing those characters, add 4 or 5
more characters to your practice list. Continue adding characters in
this manner until you have the entire character set (as required on
the FCC exam) included in your practice sessions.

* Until you have learned the code well, refrain from using WORDS in your practice sessions. Rather, receive random characters of 5-character groups (EH5IS HIS5E 5HSEI, etc.).

* As you hear each character, write it down on paper. I find it easier to PRINT, rather than write, each character. At the end of each session compare your copy to the code list that was sent and note any errors. When you can comfortably copy a session with no errors, add the new characters to your list.

* Don't feel discouraged when you miss a few characters during practice, even when you miss some of the characters that you learned in previous sessions. Ocassionally, you may feel that you're regressing rather than making progress. This is normal. Just keep on concentrating!

* I agree with the Farnsworth method. That is, the character speed should be kept constant, while the spacing between characters and words is decreased as the code speed increases. I DISAGREE with the ARRL's character speed of 18 WPM. To the untrained ear, this is too fast for some individual's to be able to distinguish a "dit" from a "dah." For the beginning student, a better character speed is 10 WPM. Once the code is learned at a 10 WPM character speed, then the character speed can be increased.

* To reenforce what Gary said, to develop a good "fist," learn the SOUNDS of the code first. Otherwise, your sending will be based on an untrained ear, resulting in poorly spaced code.

There are different schools of thought on how the code should be learned, but I think every one agrees that code should be learned by SOUND. Learn the sounds rather than the number of dots and dashes that constitute the character. We can all recognize the rhythm of "Shave and a hair cut two bits." whether the rhythm is slow or fast, because we recognize the *sound*.

>be the nail-in-the-coffin for this hobby.

You're wrong, Dick. Today's amateur works at a different functional level, but they are still learning and experimenting. Did you blow your own glass for tubes and make your capacitors from scratch when you started out? Of course you didn't. But the amateurs who came before you did. Does that make your tinkering just the act of a scavenger feeding off the bones of a war's excess, and the previous generation the one which was really committed? No, of course not. You used what was available to you. Today's amateur uses what's available to him. That includes things like complete subsystems on a chip or board, and software or firmware on a disk or EPROM.

Instead of single circuits containing 30 components, today's amateur works with single chips containing thousands of transistors and complete subsystems containing dozens of chips. This is his equivalent of the surplus you scavenged. His tinkering can do lots more complex and interesting things than yours could, just as you could do lots more complex and interesting things than your predecessors could with galena and Model T spark coils.

I started in amateur radio when the transistor was just starting to displace the vacuum tube in new radios. I had the chance to work with some of the boatanchors mentioned earlier in this thread as well as the more modern designs. I converted Motorola 5V and 40D taxi radios to 2m when FM was just starting, and there're still pieces of a gutted ARC-5 in the bottom of the

junk box somewhere. But I work with microprocessors, DSP chips, and complete transmitter and receiver subsystems on a chip now. The basement is still busy, and lots more productive today. Why isn't yours?

In twenty more years, there will be oldtimers talking about the good old days when hams had to edit their own config.sys files and some radios still had knobs mechanically connected to variable capacitors or resistors, and newcomers will wonder what in the devil they are talking about. Technology moves on. You can stay current, or live in the past, but it is those who stay current who'll be doing the new and exciting things.

(Not that resurrecting old hulks isn't fun too, but it's a nostalgic type of fun and not exploring new ground.)

Issac Newton said that he could reach far because he stood on the shoulders of giants. We do not need to regurgitate phylogeny to progress. We don't have to reinvent the wheel in each new generation. We can advance by standing on the base that has been built before. Many of the things you did are now buried deep inside a chip. We don't have to replow that ground. It's now a given. We can build on what has come before without concerning ourselves with the details of that previous work.

Even in the 50s, not every amateur was a tinkerer. Some just bought radios and operated. That's still true today. That's not a disgrace either. There's a place in amateur radio for operators as well as a place for builders. We who build can moan about the knob twiddlers, but I'd be lost in a Dx pileup (not that I'd ever deliberately get in one) and they wouldn't. Different facets attract different people. Darn few of us are Renaissance Men who can do all things well.

Depending on how much you want to spend, you can try any of the
following: Heil (various models-wired for Icom), Amplified D-104,
Shure 444D, or almost any low impedance dynamic mike.

The Kenwood MC-60A has an internal preamp which should have been
"on" but may not have been powered from the IC-735 if you did not
change the mike plug to meet Icom's pin-out. As long as you re-wired
the connector properly, the MC-60A should have worked fine. (You may
have to use the internal AA batteries to power the MC-60A preamp.)

SERIOUS WANT!

Collins 30K1 - 30K5 . These are AM Tx only rigs, 4-125 final
modulated by a pair of 75THs. Rack mounted. Must be in restorable
shape.

Will also consider Collins 32V1 or 32V? or close equivalent
AM rigs of the '49-early '50s period, if need be.

Any possible leads are also be appreciated. Thanks.

See the July 19th edition of the ARRL Letter Electronic Update (at http://www.arrl.org).
It says that "w4o" is the "official" olympic station, and that it's already been active
on 20 and 10 meter SSB. Alternate olympic callsigns for the same station are w400o,
w96o, and w26o.

I bought an IC-720 sight unseen along with the SM-5 microphone. The rig was a poor piece of engineering, but the mic was great. When I traded in the ICOM for a new Yaesu FT-980 I kept the SM-5. I had to wire a resistor between the mic connector on the rig to a 9V source to power the mic, but it was worth the time.

I suggest you pick three mics that you really want and look for them on the used market. You might even place a WTB ad on the net. The objective is to get a high quality mic for less money. If you can do that you'll be happier in the end. The D104 dates back to the early 50's and I think the mics today are a lot better.

Regards,
W0MAY

5801. This Week in Amateur Radio #173 (for air through 7/26/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-20 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JNHO-AM.sanderman@delphi.com>
Source record: 220728

Here is a summary of news items covered on edition #173 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 26-Jul:
-
1. Amateurs Ready to Assist in TWA Flight 800 Recovery Effort
2. Olympics Bring Telecommuting to Atlanta Businesses
3. New DO-17 Software Loaded, AFSK Operational on Two Meters
4. DARC Horkheimer Prize Awarded to Prestigious German Amateur
5. "Ecologically Friendly" Lithium Ion Battery Developed
6. Weekly Propagation Forecast
7. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
8. New PBS Series to Include Amateur Satellite Demo This Week
9. AMSAT-NA Asks for New NCSs for Weekly 75 and 20 Meter Nets
10. Special Event Station Calendar
11. "The RAIN Dial-up" from Chicago
-
Funding for the program's transmission and production expense was
provided this week by a grant from "The SWAT Team", users of the
N8DXB repeater, where "This Week in Amateur Radio" is heard in
Kalamazoo, Portage, and Battle Creek, Michigan, Sundays at 8:00 PM
on 145.17 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west
longitude in equatorial geosynchronous orbit. The transponder
center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz.
Program audio is on the 6.2 MHz analog subcarrier and carried on
VHF/UHF repeaters throughout North America and on 160 meters at 1860
kHz. Contact your local amateur radio club or repeater operator if
"This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations
from repeater operators, amateur radio clubs, and individuals.
Further information is available from George Bowen, N2LQS, at
518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB,
at 518/664-6809 (email sanderman@delphi.com). You may also reach
them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

> Stan/KD9BE

Hi Stan,
Your last sentence is probably on a lot of other's minds SO...I thought Id drop this out for all to ponder, etc..

Remember, before you can place an autopatch call (either way) a control op must be on duty at a control point and monitoring the rptr. When a user accesses the patch, the control op hears all aspects of the patch (sometimes knowing the number being dialed if the rptr is set up to do so)....IF a violation occurs, the user or control op can shut the patch down (somewhat after the fact BUT the amateur is the one who initiated the 3rd party tfc..)..This is a nice side benefit of amateur radio....being able to handle (and USE) 3rd party tfc...

Reverse autopatch would benefit the one on the phone, not the amateur....if the person on the phone wishes to talk on the air SOOOO bad, that they have to call in, they should get a license instead (thats what ham radio is all about....Radio communications...we are not a mobile phone service!)

As a rptr trustee and autopatch operator since 1977, I have had several good chuckles listening to those who will spend 45 bucks for a DTMF mic to access the patch, but would not spend 29 bucks (or so) to get on the RPTR with a PL encoder!!! (Somehow their logic escaped me!)

Remember, we are HAMS...WE can have fun with our toys.....that doesnt guarantee a reverse path for those not licensed.....and thats the way the FCC has set it...

I dont agree 100% with the commission.....but understand their thinking and follow the rules....and if I feel STRONGLY about something, I file reuqests for rule changes and also actively comment in NPRMs issued....as should everyone...

but the FCC has made clear that non hams should be encouraged to get licensed...
not be active as thrid parties...

Hope that explained the concerns you (and Im sure others) have expressed

Chris
WB5ITT

(PS a copy of the ARRL's FCC Rule Book is highly recommended for all new
amateurs to read!.....and even us old farts ...at age 37....too! :)

Jim,

Whatever your beef with Chris, I don't think your posting or choice to air your differences with Chris in this particular forum reflects badly on your judgement. It is your reputation which would appear to be tarnished by handling the affair in this manner.

Jim, you wrote and published that Chris Imlay was providing less than
fully effective legal service to two of his clients on account of
conflict of interest. And you have repeated that allegation to the
Usenet world at large.

I believe that a defense of personal opinion is not available to you
in this matter. I believe that you will need sufficient proof for
your repeated allegations of professional malpractice to have Chris
at least sanctioned if not disbarred, or your defense will fail.

I wonder how you know that Chris will agree with that? The same way
you know that he is providing ineffective legal services? Oh dear :-(

5808. Re: How About the Movie "Phenomenon" & WB6QLF

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-20 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JNFNvAM.sanderman@delphi.com>
Source record: 220735

What's most puzzling is that, according to "The ARRL Letter" on 7/12/96, a member of the Hq. staff served as a consultant for the movie. I too noticed that is was some type of data mode signal (not Morse) that Travolta was copying in his head (and noted that to my YL) and that they were operating voice mode on 30 meters, a band reserved for Morse and data. I have to wonder how thoroughly the amateur station sequences were thought out. Certainly could have been just as easy to find a high speed morse station and to show a digital display on 40, 20, or 17 meters for the voice "CQ"....

Just some more mind candy....

> grant them any such powers.
>2) They perform volunteer duties which would otherwise have
> to be performed by public employees paid by your taxes.
> (In other words, the public is getting something free.)

These two statements appear to either contradict each other
or you are saying that the paid government employees which
the OOs displace had no authority either. In which case why
should we pay them? And why should the OOs exist if they aren't
filling a purpose for which we would pay?

The OO is either playing a quasi-governmental role or he is not.
If he is playing such a role, he has the power of the government
behind him, so he is not powerless. If he is not, then he's just
another nosy neighbor, and deserves to be treated like any other
nosy neighbor, IE equally under the law with the rest of us.

(Note, there's nothing wrong with nosy neighbors. A neighborhood
watch can be a good thing. But it can be a bad thing if the
nosy neighbor is malicious and *shielded* from the consequences
of such malice. Then he's just a police informant, like those
found in totalitarian societies, and can abuse the public trust
at will.)

>3) As volunteers, they risk frivolous and malicious lawsuits
> when performing these duties, and under current law would
> have to defend against such lawsuits out of their own

>4) HR 3207 would simply provide these volunteers with the same
> legal defense help they would have if they were paid public
> employees performing these duties.
>5) If an OO screws up in a fashion that deserves action by a
> lawsuit, a lawsuit can still be filed.

As I understand it, this law would use public money (yours and mine)
to pay to defend such suits, and pay any damages in the event the suit

is ultimately lost. This does change the status of the OO. Unlike the rest of us, he can act with disregard for the consequences since the government will pick up the tab if he behaves improperly. And since the government has practically infinitely deep pockets, there would be a chilling effect on those who might otherwise bring suit for legitimate cause (civil suits are most often won by those with the deepest pockets because they can afford to pursue them with ultimate vigor regardless of the rightness or wrongness of their cause).

>6) HR 3207 does NOT increase the powers of an OO in any fashion.

That's true, but it appears that the FCC would like to off-load much of their responsibility onto private parties. The licensing responsibility has already been so off-loaded, and it would appear that the FCC would like to do the same with enforcement (since they've so obviously abandoned that function themselves). If they do, then the shielded status of the OO would matter much more.

I think the real issue here is that the OO does not act under the direct authority and supervision of government at present but this law would give him the protections he would enjoy as if he did. This would remove any accountabllity from his actions. I believe that's what concerns some people.

The OO acts under the supervision of the ARRL, so if any party should pay for defending suits against the OO, it should be his supervisors at the ARRL, and not the public at large. That way the chain of accountability would not be broken (and his supervisors would act with more diligence to make sure such suits aren't warranted). In essence, this bill is a subsidy to the ARRL's malpractice insurance (if the ARRL has any).

To put this in perspective, the man in the bulletproof suit will often be tempted to take actions which he wouldn't prudently take if naked. So in a sense the bulletproof suit gives him power, just as any other weapon would. Those who wield weapons must be held accountable for their actions to make sure that they wield them prudently and legally. This law would remove some of the incentive for OOs (AAs, or any other non-governmental volunteer as well) to act prudently (and remove any incentive from the OOs supervisors to perform diligently as well). This isn't a Good Samaritan law, this is a blanket Witness Protection program without any check or balance.

To me, that's the crux of this matter. The bill as written doesn't replace the threat of suit with some other mechanism to protect the public from abuses by those so shielded. Until it is modified so that it does, I can't support it. If such checks and balances were incorporated, I could support it since I think that neighborhood watches are generally good things if they aren't allowed to become malicious instruments of terror.

This may seem gross over-reaction to those of you who have read this far, but I assure you that if you had been the target of overzealous action due to a malicious tipster, you'd feel differently. When the jack booted masked government thugs kick in your door on the basis of false information, you'll feel just as violated and just as helpless to respond as anyone. (That invasion can be metaphorical or physical, the trauma exists in either case, and the costs of defending against it can be just as high.) I'd much prefer our enforcement agents to be meek gentlemen in bow ties rather than masked stormtroopers with bulletproof vests and MP5s. At the very least, I expect the source of their information to be reliable, responsible, and *accountable*.

Here we go again...

Someone posted on this newsgroup regarding a problem he was having with a repeater jammer. He then asked if anyone had a solution to his problem. I responded with a solution which is quick, effective, inexpensive, and... most importantly...SOLVES THE PROBLEM!

If you would rather play footsie with the guy by "asking him nicely to please not jam the repeater anymore", or waste time with the FCC (who could CARE LESS about amateur issues in this day and age), that's your business. But I choose to solve the problem. Many a repeater jammer has been silenced with the proper, strategic placement of a simple steel pin!

Source record: 220845

Hi,
(Yeah, I'm delurking)

I'm working on learning Morse code for my license, and I'm struggling to get anywhere near 5 WPM. As it is, I'm taking the no-code tech exams Sunday, but the exams are offered at the end of every month, and I was hoping to have the code down for the August exam. Does anybody have any tips? (What I'm doing is basically just going over the letters, reading them and tapping the tapble to figure out what they should sound like. It makes perfect sense while I'm doing it, but I can't make hide nor hair of the practice tapes I'm using, which are at just over 5 WPM. Any other ideas?)

post, email, smoke signals, whatever's easiest for you, I'll get it so long as the response isn't in Morse;-)

TIA,
Mike S. Medintz

I haven't seen such a plot, but empirical experience would suggest
that direct connection to the battery does offer some suppression.
Every time I've hooked up a radio that way, I've gotten audibly less
noise in the radio. How much of that is due to elimination of ground
loops and how much of that is a direct result of the battery acting
as a filter I can't say.

>ARD is an excellent and very powerful analysis program for only 150
>bucks. I use it a lot and like it. I believe there are schematic capture
>programs as freeware available.

I like ARD, but I have a couple of complaints. I've yet to find a
schematic capture program which will generate a node list I can
import into ARD. I keep threatening to write a filter program to
take the output of my schematic capture program and convert it to
an ARD compatible netlist (and vice versa) but I haven't done it yet.
Some of the commercial versions of SPICE (MicroSim's Design Center)
do this for you. (It's *much* easier to work with a schematic drawing
than a node list. I've spent far too much time debugging node lists
with connection errors which would be glaring when presented as a
schematic.)

My second complaint is that ARD doesn't do DC bias analysis or
large signal analysis. This makes it lots less useful for modeling
oscillators, mixers, or class C amplifiers than it could be. SPICE
is better. But what ARD does, it does very well, and the reports are
excellent. If analyzing passive networks and small signal Class A
amplifiers is what you need, ARD will do it. Otherwise, you might
want to look at MicroSim's SPICE products (or one of the freeware
SPICE programs).

It should be noted that ARD is not a design aid in the sense that
it will crank out component values for you, as some filter design
programs do. What it is is a simulation program for testing a
proposed design to see how it will behave at various frequencies
with various terminations. For interactive design (IE cut and try),
ARD is annoyingly slow, so you want the design basically finalized
before presenting it to ARD for analysis.

STUDY CLASSES FOR AMATEUR RADIO LICENSE!
RICHMOND, VIRGINIA, U.S.A.

To enjoy the fascinating hobby of HAM RADIO, You must
be licensed by the Federal Communications Commission.
You are invited to enroll in a 10-week course of
study for the following license:

***** Novice & NO-Code Technician *****

***** Technician Plus *****

***** General *****

Registration fee $10.00

Textbook used is "NOW YOU'RE TALKING"

Registration/Orientation Thursday, September 12, 1996
Schedule: Tuesdays & Thursdays 7:00 P.M. - 9:00 P.M.
Classes begin Tuesday September 17, 1996

Place:
Westhampton School 5800 Patterson Ave. (at Libby Ave.)
For more information,call:

Mike Ratcliff, KC4AHE, (804)-272-7167
Warren Boyden, KB4STL, (804)-233-3170
Raymon Roberts, W4MYI, (804)-740-5850

Sponsored by the
RICHMOND AMATEUR RADIO CLUB
Club meetings 8:P.M. Every SECOND Friday
Bon Air United Methodist Church
1645 Buford Road
VISITORS WELCOME

Do you have a physical disability or sensory impairment? Would you like to make new friends with people all over the world? If so, the Courage HANDI-HAM System can help you!

The Courage HANDI-HAM System is a non-profit international service organization which assists disabled individuals in obtaining amateur radio licenses, radio equipment, and hands-on help.

One of the premier services of the HANDI-HAM System is a semiannual Radio Workshop. At Radio Workshops, disabled individuals work intensively for one week on mastering material to pass amateur radio license exams or improving their radio operating and computing skills. There is also plenty of time for camaraderie and fun!

A Radio Workshop session will be held from August 25 - September 1 at Courage North, a beautiful camp area near Bemidji, Minnesota. All services are provided - instruction, recreation, food, lodging, and caregiving. The total cost for the week is $160 (you must make your own transportation arrangements, though), and scholarships are available to those needing financial assistance.

There are still a limited number of spaces available for this session. If you would like to get started in ham radio, upgrade your present license, or improve your operating skill, we would love to have you join us!

For more information about Radio Workshop or the Courage HANDI-HAM System in general, contact:

>us not "made of money", simple economics wins out every time!
>

Because, Drew, the autopatch isn't free. It's far more expensive
to pay for the equipment, power, phone line, etc. for a 2M repeater
with a patch than it is to use a cell phone for years.

If the repeater owner allows you to use the patch for trivial
phone calls, without you having paid for the maintenance and upkeep of the
machine, more power to you and him. I suspect, however, that most
would take a dim view of someone using their machine just because they
were too cheap to get a cell phone.

BTW - if you really think that cell phones cost 30-40 cents/minute,
you obviously haven't looked at them recently. Top rates are generally
about 20 cents during prime time, and free after 6:00pm and all day
weekends. If you're paying more, you need to shop around.

- Rich

>Lewis
>

Lewis,

I am running an FIF-232C between an FT-1000D and LOGic 4 software under a
Windows environment. Maybe I can help you.

The problem is most likely to be found on the PC side of the interface,
between your software and the DB-25 connector on the FIF-232C.

What program are you using to communicate with the rig? Are you using Windows,
DOS, NT, or some other Operating System / environment? What version?

Have you configured all of the PC serial port parameters according to the
needs of the software and the FIF-232C (i.e. Comm Port Number, I/O Port
Address, IRQ assignment, BAUD rate, etc.)?

I have a limited number of EF Johnson Fleetcom II UHF rigs for sale.

These are easily converted to repeaters. I can provide the unit 2 ways.

As-Is - $50.00 + $10.00 s&h You do all of the conversion, alignment, recrystaling, etc. I will provide instructions for the conversion & a copy of service manual.

Ready-To-Go Repeater $300.00 Fleetcom II converted to repeater use, crystaled to your freqs, tuned and aligned, simple carrier operated relay. You still need to provide a duplexer, antenna, & ID'er w/manual

These units are all pulled from service and tested & aligned on 468mhz.

I also have a limited number of service manuals for older commercial equipment. E-Mial your needs and I'll see what I can do.

Other Services available: (All prices + s&h)

Reprogramming of commercial equipment to Amatuer freqs - $35.00
Equipment Repair - $60.00/hr (1/2 hr min, estimate if repair will take more than 2 hr.)
Custom Cables
'Most anything else your rig might need.

E-mail your needs to:
kproctor@ix.netcom.com

I don't have the info for you, Rick, but contact the State MARS
Directo or High Tech director for your state. Most MARS packet boards
have large databases of info on freq mods. Unfortunatly, I don't have
your rig in mine. You can also check with a local ham dealer. Most
of them will do the mod with proof of MARS membership.

Good luck!

ANd what did you do when you called in? If you discussed ANY part of your
business activities on the air, you violated Part 97.

> Be
> careful when you say "ANY reason" - 97.113 does not make such a broad
> prohibition. You cannot make any communications on behalf of your
> employer - but that does not mean you CAN'T call a business JUST BECAUSE
> you work there.

Most people would be calling THEIR place of business to conduct business
there....you cannot call into your business and check on messages, etc
with anyone there...you COULD possibly call a friend at work and get
together for lunch.....(as friends) but I doubt less than 1% of those
doing that WONT be discussing the business right?

So if you wish to push the point, true...you CAN call your place of
business...you just cannot DISCUSS ANYTHING about the business since YOU
and your employer/etc could benefit from it....

As a rptr trustee, I would not allow anyone to call their place of
business......

Gary, that's a possibility, although it wasn't a problem for me. In fact, it
helped me to distinguish similar-sounding characters.

I agree. After one begins to find his limit copying by hand, a typewriter
will greatly facilitate the copy, assuming that one can already type
reasonably well! Copying code by typewriter, however, is a skill in
itself. First, one has to learn by reflex action how to type, then learn by
reflex action which key to type when a code character is sounded.

My limit in copying code by hand is around 20-22 WPM, although it used to be
faster. I suspect that many folks who can receive code at this speed can do as
well or better, especially since during a typical QSO one only needs to write
down key words.

> the good thing about Farnsworth.

Gary, I respectfully disagree! DISTINGUISHING a dit from a dah is not tantamount to COUNTING dits and dahs. When I copy code at 20 WPM, I cannot possibly count the individual dits and dahs, either consciously or subconsciously, yet I must distinguish them before the character is evident.

>

Well, I see the Farnsworth method as Morse Code with greater spacing between the characters and words. It's still Morse Code even though the characters are not spaced three dots and the words seven dots. From my perspective that's not much different than having a fast-talking person to slow down so that you can better understand what is being said. The individual is still speaking English, only at a slower rate.

Yes, if sent *quickly* with a character speed of 10 WPM, which is plenty fast for an untrained ear. :-)

Best regards,
Lindsay

I have a 144/440 dual band mobil for sale with out box or manual. Face is detachable and the body does have some marks from when it was mounted before I owned it. radio works fine and Kenwood is the only person that worked on it. remote control cross-band repeat. PL decode installed. Looking to get a TM731A that I have already found and Now I need to move this one. Cable and Manual are availible from Kenwood. Back-lit mic will work great with this unit. Radio was used as a base. Small and compact. Just a little bigger than the TM733A mobil. Asking $350.00 shipped to the door.

A friend in one of the clubs that I belong to just purchased a Saturn, and had a very positive experience with them. They checked out the RFI implications, and reported that there would be no problem.

Further, _they installed the wiring harness from the battery to the rig, and the coax from the rear window to the rig AT NO EXTRA CHARGE TO HIM!_ Even better, this was the second time that they perfomed this service (his second Saturn.)

Next time I am looking at a new car, this seems like a great public relations policy that will make me give it serious consideration.

Jim Lowman wrote:

> 1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Absolutely.

> 2) Do you send your card in an envelope?

Usually. The printing came very close to the edge on my cards (our own custom artwork.) On some cards that I receive as "post cards", the post office has attached strips of tape to the bottom and top edges. I have no idea why they do this. Perhaps it's in support of the bar codes. Maybe next time I am in the post office, I will ask.

> 3) ...with a SASE or "green stamp" enclosed?

If the other ham requests an SASE, yes. If not, it depends on how bad that I want the other card. Also, if the other ham is running a DX type operation, such as one that I recently heard from Alaska. I know that for her to QSL all of those contacts would become a monumental postage expense, and I was the one that needed Alaska; she probably did not neet Connecticut.

> 4) Do you QSL 100%, under some circumstances, or not at all?

Under some circumstances, but always upon request.

> 5) Do you believe that all pertinent info should be printed/written on the
> *front* of the card?

My cards are that way.

> While we're at it, I see a real deterioration in the quality of QSL cards,

Wait a second ...

If a fellow is working for two sides of an issue at the same time there
has to be no proof of conflict. You can not prosecute and defend. There
needs to be no proof.

I can't hire an FCC lawyer to represent me should I be accused of
a Part 97 rule violation. The FCC would see that, without proof, as
a conflict of interest.

Now, is the ARRL seeing their lawyer as being in a conflict of interest?
We've not heard from them. Maybe we should wait for their thoughts.
I hope they comment as I don't want to make my judgement based on
what has been presented here (and with the implications a lack of
comment would have).

Expressing an opinion that someone in a membership organization is
out of line is part of the democracy of the organization ... right?
The legal threats which resulted were sad. I would have defended
myself in a reply. Let's hope he was just too upset to see an
alternative course. If not, he's doing a pretty poopy job (I'm a
member! I'm a member!).

I think the "ordering of pizza via 2 meters autopatch" bit was given
more as a tongue-in-cheek example about the use of amateur radio for
conducting business (not related to what you do for a living) than an
actual application. However, I agree with Dan the use of 2 meters to
order a pizza is a waste of spectrum...unless you are at a remote site
fixing the local repeater and no phone is present :-).

> this manner until you have the entire character set (as required on
> the FCC exam) included in your practice sessions.

Working with the characters a few at a time is a good plan. However,
this particular group would be particularly bad to drill together.
It consists of all dit sounds and will tend to make you start counting
dits in your mind. You don't want to do that. I'd suggest instead learning
the characters which sound the most *unlike* together first. For example,
drill 'A' and 'N' together, 'W' and 'G', 'F' and 'L', etc. Since they don't
consist of only strings of dits, they will be easier to distinguish
by sound and won't tempt you to start counting dits.

>* Until you have learned the code well, refrain from using WORDS in your
> practice sessions. Rather, receive random characters of 5-character
> groups (EH5IS HIS5E 5HSEI, etc.).

Yes, this is important. You don't want to be distracted from the letter
sounds by thinking about what the text means. That can come later when
character recognition has become an automatic reflex.

>* As you hear each character, write it down on paper. I find it easier
> to PRINT, rather than write, each character. At the end of each
> session compare your copy to the code list that was sent and note any
> errors. When you can comfortably copy a session with no errors, add
> the new characters to your list.

If you want to develop the ability to copy at high speed, I'd suggest
you don't want to write or print by hand. Rather, I'd suggest copying
with a keyboard. You can type lots faster than you can write. You do
want to get what you copy down on paper (or disk), however. That's what
makes it copy. VEs are supposed to let you take the test with a typewriter,
the FCC did when they were giving the exams, and I'd suppose they'd allow
a basic word processor too. (You wouldn't want to use one with automatic

spell checking, however, since the text you're copying might be deliberately mispelled, and it might be considered cheating by some too.)

>* Don't feel discouraged when you miss a few characters during practice,
> even when you miss some of the characters that you learned in previous
> sessions. Ocassionally, you may feel that you're regressing rather
> than making progress. This is normal. Just keep on concentrating!

Yeah. But if you learn in such a way that you aren't counting dits and dahs, you'll regress less, and you'll progress faster. If you aren't missing an occasional letter, however, you aren't pushing yourself hard enough. Only worry if you are consistently missing the *same* letters. In that case, more drill should be done with those particular letters.

>* I agree with the Farnsworth method. That is, the character speed
> should be kept constant, while the spacing between characters and

> a "dah." For the beginning student, a better character speed is 10
> WPM. Once the code is learned at a 10 WPM character speed, then the
> character speed can be increased.

I disagree completely on two different counts. First, you want the speed high enough that you *can't* consciously distinguish a dit from a dah. If you can, you'll start hearing the dits and dahs separately and fall into the mental lookup table trap. This will limit your top copy speed to 10-12 WPM until you *unlearn* it and start just hearing letter sounds. You need to learn the character sounds at a speed that won't let you fall into that trap. That's the good thing about Farnsworth.

The bad thing about Farnsworth is that it *isn't Morse Code*. Morse is a timing code, and has very specific timing ratios. Farnsworth uses a different set of timing ratios, so it is not Morse Code. However, it *is* what the ARRL VEs use for the tests, so it *is* what you need to learn.

>* To reenforce what Gary said, to develop a good "fist," learn the
> SOUNDS of the code first. Otherwise, your sending will be based on an
> untrained ear, resulting in poorly spaced code.

And worse, you start thinking about the *mechanics* of Morse rather than the sound of Morse. This leads you into the conscious recognition of dits and dahs trap. You *must* avoid that trap or you'll face the dreaded "hump" at the 10-12 WPM speed where you can no longer do a mental table lookup to translate the characters. This is the single hardest thing people learning Morse face. If you can avoid this trap, you'll be way ahead of the game.

>There are different schools of thought on how the code should be learned,
>but I think every one agrees that code should be learned by SOUND. Learn

>the sounds rather than the number of dots and dashes that constitute the
>character. We can all recognize the rhythm of "Shave and a hair cut two
>bits." whether the rhythm is slow or fast, because we recognize the
>*sound*.

Yes, and it is much easier to learn that rhythm, and the Morse letter
rhythms, if sent *quickly*. After you've learned the sound pattern sent
quickly, you will also be able to recognize it when it is slowed. But if
you learn it slowed first, you'll have a hard time recognizing it when
it is done quickly. This is why all the business about Farnsworth exists.
It may not *really* be Morse, but it is the best way to *learn* Morse.

Morse copy is a conditioned response. A lot has been learned about
conditioned responses and how to induce them since the Korean War.
(Some call it brainwashing.) The key thing is that the conditioning
has to occur on a level below the conscious mind. So you want to use
any and every trick possible to keep the conscious mind out of the
process. It can only interfere, not help. So don't *think*, just do.

Repetitive drill is a powerful conditioning tool for several reasons.
First, repetition burns the neural pathways you are trying to establish
into the brain. And second, repetitive drill is *boring*, so the
conscious mind decouples itself from it after a while and *gets out
of the way*. So if you find drill boring, *good*, that's the way it
is supposed to be.

VW used to run an ad which said that after you'd driven one of their
manual transmission Beetles for a week, it became an automatic. That's
because shifting had become a reflex action. That's what you are trying
to do by developing a conditioned response to Morse character sounds,
make it automatic. You shouldn't have to think about it, just do it.
Of course Morse has more than 4 characters, so it'll take longer than
a week to make it automatic.

>Jeff Cook

I am only a gonnabe lawyer, so I'm not going to express any legal opinions
regarding this dispute. However, I am going to say that I don't care much
for a scenario where a lawyer threatens litigation against someone who airs
an opinion that the lawyer is acting improperly. The First Amendment was
written precisely to permit ordinary citizens to criticize powerful members of
society without fearing legal retribution. When an attorney seeks to exploit
his stronger position vis'a'vis his ability to litigate, in order to suppress
free speech, this is not good.

In fact, I suspect (this is not a legal opinion, just a guess) that a court would
make short work of any libel case connected with this matter.

As far as the use of the internet goes, I kind of think that the internet
strengthens free speech, by giving those without ordinary media access
a public forum in which to express opinions. Nothing wrong with that, in
my opinion.

Burt, you told me that ham radio, in general, is boring. When I stopped and thought about it, your right, I'm
getting dam bored with it too. Perhaps, its the increasing lack of intelligence I find on all the bands.
My apology for doubting you.

I am looking for a copy of the new Extra question pool in text form if someone has it.

Also, is there an update to the W5YI programme for the new pool? If so, where can that be located?

BTW, I know about the WWW online Extra pool.. It's great, but it's nice to have all the questions at once.

Thanks!

I can agree sometimes. these older hams need to get in to some
exciting stuff like life. I happen to like ham radio. here in
California we have a repeater that would be great for you. 147.735.
here you can hear untruths, slander and lies about everyone and
everything under the son. Yah Roy Tucker. there you have it.

This seems to be a question you need to ask someone in Belguim. I know
when I travel outside of US and take equipment I have to declare that I
plan on taking it back home with me and I have to have proof that I
originally purchased it in the US when I reenter the US or I my have to
pay duty on it in the US.

>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Yes! 100% Let's keep this practice alive! I *love* to look back through
all my cards and see all the interesting places. I really like the
"interesting" cards - pictures, drawings, etc.

>2) Do you send your card in an envelope?

No. I thought that's why they are all in a postcard format!

>3) ...with a SASE or "green stamp" enclosed?

Only if I really, really, really need the QSL.

>4) Do you QSL 100%, under some circumstances, or not at all?

100%

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

That's what I read in the "ARRL Operating Guide".

5860. PC Flex Software

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-21 00:00:00 UTC
From: marty@trucom.com
Message-ID: <4suaih$alo@thepit.trucom.com>
Source record: 220692

Hello, Folks:

Anyone out there have any experience with the PC Flex software,
particularly the Sound Blaster sound card drivers?

I would be especially interested in how the 9600bps SB driver works
for you.

I am interested in doing some serious development of the local packet
network and I can get PCs and SB cards for a LOT less than I can get
TNCs (I have more than a dozen 386/486 PCs and a whole box full of
SB-16 cards!)

I noticed that the SB driver strongly suggests that a 486 be used.
Anyone tried it on a fast 386 (66Mhz+)?

Thanks!

SB DX @ WW $OPDX.263
Ohio/Penn DX Bulletin No. 263

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 263
BID: $OPDX.263
July 22, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, N1REU, WB2DIN, K4CEF, W4BRE, N4AA & QRZ DX, W5VSZ, KK6H, AH0W/OH2LVG, 5X4F, DF4RD, DL6MHW, DL7VOA, DL9OGA & DX News Letter, F6AJA, G4BUE & DX News Sheet, OH2BDP, OH2MEP, PA3DUA, PS7AB, SP5PB, SP6ECA, VA3CW, and VE3JLP for the following DX information.

3C0, ANNOBON ISLAND. The DX News Letter states Teo, EA6BH, will not be active from Annobon Island in the near future. There were no other details or reasons given.

5A1A LOGS UPDATE (July 1995 Ukrainian operation). The following is a press release from Dan, W4BRE: "The 5A1A logs on disks for the July 1995 operation arrived Thursday, August 18th, followed by the PAPER logs this morning August 20th. These have been forwarded to N4AA to answer requests from U.S stations (35,000 plus Q's made quite a stack of PAPER). Any USA station who would like to get their 5A1A card virtually immediately, can QSL to N4AA, Call-Book address. While Toly is still having severe financial hardships because of this DXpedition, he certainly wants to thank the NCDXF, INDEXA, and Yaesu for their contributions of $2,000 each ("The Danish DX Group" kicked in $650 on August 24, 1995). Thanks to all the individuals who helped as they could with contributions of slightly over $1,050. Everything combined has enabled Toly to recover approx. one-third the amount he borrowed and must pay back. A year ago today he was in Tripoli burning-up the airways (personal note: Surely he had no idea that a year later he would still be struggling from it.) The account to try to help him is still open at: "5A1A DXpedition," 2410 Covemont Dr., Huntsville, AL 35801. Hope this update giving the accurate status on the LOGS, helps the situation. (Any questions can be directed to me at: whitsett@HiWAAY.net ....Many thanks to all & 73.... Dan-W4BRE"

5X, UGANDA. Gus, SM5DIC, will be active from Kampala as 5X1D until the end of October. Activity will be on CW/SSB and 80-6 meters. QSL via

SM0BFJ.

5X4F QSL UPDATE (and next operation!). Paul, 5X4F, states all the direct QSLs have been answered and that approximately 1500 QSLs will be sent to the bureau sometime this week. He also says, "A big thank you to all who sent extra greenbacks to help defray mailing costs. Thank you too for all your patience. The rarity of 5X plus my extra activity proved too much for a busy young family with many community activities and a house remodeling project. Now that the QSLs are out, I'm looking to having more time to enjoy my grandkids. Also, a big thanks to the XYL who helped with the QSL chores the past several weeks. We hope to return to Uganda on the 5th of September. Reports from the NW Nile district are not too encouraging as there continues to be reports of rebel activity in the area. I am still hoping to take a battery operated amp along back with me, if we can come up with the $850 needed. The 80 feet of Rohn 25 tower has cleared customs. Plans are to erect it when we return and then hang the Battle Creek Trapper off of it"....
....73, Paul 5X4F

A35, TONGA. Paul Kidd, KK6H, reports he is "Tonga Bound!" Paul states, "Well, the time has finally come: I retired from the Fire Dept., I sold my house, I'm packing my bags, and I'm moving to Tonga on July 29th. I'll be there for at least 6 months, probably for a year, and perhaps longer. I'll know more after I've been there awhile. HI
I will arrive in Tonga on July 31st, and I will be active as A35RK as soon as I can get some antennas up. I'm quite sure that I'll be on 40-10 meters, mostly CW and RTTY, but I may not be able to do anything on 80 meters for awhile. No 160 meters. PERIOD!" Paul will be taking some "side-trips" while living on A3-land: to Fiji for sure, signing 3D2RK; possibly to Rotuma, Vanuatu, South Cooks, Niue, and French Polynesia. No dates have been set, however details will be forthcoming. QSL A35RK via W7TSQ ONLY. NO A3 BURO CARDS!
ADDED NOTE: Paul mentions that Craig Thompson, A35CT, is leaving Tonga FOR GOOD on August 6th, and with his departure, there will be NO FUNCTIONAL A3 QSL BUREAU. Craig was "The BURO" for the last 4 years, and Paul doesn't know who will replace him. Any future developments will be reported via Paul's QSL manager, W7TSQ.

AH4, MIDWAY ATOLL. Frank, AH0W/OH2LVG, has provided OPDX with the following details on the upcoming Midway operation which has been rescheduled now for August 18-25th, due to a slight delay in the modifications of the aircraft. The Midway Team consists of:
UA3AB, WA7LNW, W2UE and AH0W, all members of the Central Arizona DX Association. QSL route is KE7LZ. Franks states, "According to documents recently published regarding Midway, it has been over 100 years since there were any public visitors on Midway. This DXpedition team will be among a small group of such visitors to be the first to land on Midway in so many years.
The DXpedition also marks the turning over of control of Midway to the U.S. Fish and Wildlife Service, with Midway officially now called, "Midway Atoll Wildlife Refuge."

Our team will be using beam antennas (and others) which will be donated after the DXpedition to the permanent custody of the U.S. Fish and Wildlife Svc to be used exclusively by future DXpedition and Contest groups wishing to visit Midway to operate. As a part of this inauguration of Midway for DXing purposes is the formation of the Midway DX Association."

CH3Y, Special Event Station (Canada). The Lake Simcoe Repeater Association will operate CH3Y on September 21st, from 1200-2100z to commemorate the 25th anniversary of the formation of York Regional Police. Suggested frequencies: SSB - 7240, 14240 and 21345 kHz; CW - 7040, 14040 and 21040 kHz; VHF - 146.580 MHz. For a QSL, send direct (w/ SASE or SAE and 1 IRC) to CH3Y, c/o M. Kassay, 90 Herrell Avenue, Barrie, ON L4N 6T9, CANADA or via the bureau to VE3MKX. For a certificate, send direct with 9 x 12 SASE (or SAE and 2 IRC).

CORRECTION AND UPDATE. Last week's bulletin (OPDX.262) we stated that a group would be active from Aland Island (OH0). WRONG! The group is going to be on Market Reef OJ0, not on OH0. Activity will be from August 1-4th, with the following operators: OH1VR, OH0RJ, OH2KI, OH2BDP, OH3MEP and OH6PJ (To be confirmd). Operators will sign OJ0/homecall. QSL via homecalls. They will be on 160-10 meters with two stations. Antennas include beams, R5, and lowband wires. Check the usual DX frequencies on CW/SSB. They will also be on 50 MHz with a 100w amp and a 3-element yagi. OH3MEP is the chief RTTY specialist and will be active mainly on 14084 kHz (Other bands as propagation and demands allow).

F5OGL CORRECT ADDRESS. Didier is QSL Manager for S92AA, 6W1GL, TR8GL and TR0D and his correct address is : Didier Senmartin, BP 1307, F-53013 Laval, Cedex, France

FS, SAINT MARTIN. Carlo, I4ALU, will be on Saint Barthelemy from August 13-25th as FJ/I4ALU. He will be there on holiday, but plans to be active on CW and all bands. QSL to home call.

FT5XL QSLS. Jean Michel, F6AJA, reports F5NZO, QSL Manager for FT5XL, has replied to all direct requests for the log he has gotten. At the moment he has received the logs for December 1995 to February 13th 1996. Please do not send any duplicate requests. Also, please be patient!!

GM, ORKNEY ISLANDS (Scotland). Micha, DL6MHW, will be active as GM/DL6MHW during the upcoming IOTA Contest as a Single Op entry. The location of this Scottish island is near Stromness (Mainland). This island offers an excellent path to North America and good path to Britain and Europe. During the day time Micha will try to call the last 3 minutes of every hour on 28455 kHz to avoid the missing of any 10 meters opening and to help obtaining the difficult 10 meter multiplier (EU-009). Operations will only be on SSB using the frequencies 28455, 21255, 14155, 7055 and 3755 (+/- QRM) kHz. There are plans to be active before and after the contest on the WARC bands along with some CW operations. Every contact in the contest will be confirmed

automatically via bureau. If you need a direct QSL please send your SASE via DL3ABL, Andrea Diekmann, Bruno-Taut-Ring 56, 39130 Magdeburg, Germany. Micha mentions, Clive, GM3POI, will also be active from this location (which is also a very rare WAB-Square, HY21). His plans are to be active during the IOTA-Contest but on CW.

IOTA NEWS....
NA-031. Adam, KE1BG, and Jack, N1REU, will be operating from the following islands in the Rhode Island State Group: Block Island and Conanicut Island. They both reportedly have the same numbers. They plan to be active August 10-11th.
NA-111. Bob, WB2DIN, expects to be active as much as possible during the IOTA Contest. He also states that he lives only 10 minutes away from NA-111 and has been active from there several evenings during the last month giving out contacts from this Jersey Shore Islands Group. QSL to Bob Reed, WB2DIN, 538 Brewers Bridge Road, Jackson, New Jersey 08527.
NA-112. Don, KE4PUC, will be operating from Sunset Beach, NC (USI NC-12S) from August 3-16th on 10, 20 and 40 meters. Times should be between 1200-1500z and 0000-0400z. He will be on the IOTA frequencies. QSL to KE4PUC, Don Aldridge, PO Box 12302, Roanoke, VA 24024 or via the bureau.
OC-086 "Island News" report that AH0AV will be active from Saipan during the IOTA Contest next weekend. QSL via JH6RTO.

JD, OGASAWARA. Gary, W5VSZ, announced that he will be conducting a DXpedition to Ogasawara (Chichijima Island) during August, 1996, on behalf of the Magnolia DX Association. The operation should commence on August 14th (Japan time) and he hopes to be on the air the morning Asian path opens to the States August 15th. The callsign will be JD/7J1AYK. The operation will run from August 14-21st (Stateside dates). He will be operating CW, SSB, and RTTY on 80-10 meters including WARC bands (emphasis on WARC bands). His side trip to Ogasawara is specifically for the DXpedition and he will be operating as much as humanly possible given the right conditions. Gary's planned operating frequencies are 3505 kHz; 7005 kHz; 22 kHz up on 20, 15, and 10 meters; 10101 kHz, and 18070 kHz on CW, standard SSB frequencies, and 083 in the RTTY bands. Split operation is intended on all bands depending on demand. He intends to work 1/3 time on RTTY modes. QSLs will be direct to: W5VSZ, 23 Pirate Drive, Hattiesburg, MS 39402-9557. Contributions are accepted and encouraged from individuals and from DX clubs. Support should be directed to W5VSZ. Gary has established a home page for information, before, during, and after the DXpedition, and all are welcome to visit the page. The URL is: http://ocean.st.usm.edu/~gejones/ogasawara.html

JD, OGASAWARA. The DXNS report, Eiji, JQ1SUO, will be active August 8-11th, as JQ1SUO/JD1. His operations will be mainly on 20 meters during his local night time. QSL to home call.

S9, SAO TOME & PRINCIPE ISLANDS. Antonio, LX2DW (ex SO5DW, CT1DW etc.), will be active as S91DW from Principe Island, beginnig August 29th until

September 2nd. Operations will be on CW/SSB with activity on 40-10 meters. QSL via home call LX2DW.

SLIM REPORT. Paul, VE3JLP (DX Editor of "CQ DX" in the Canadian Amateur), reports he is receiving a bunch of cards from the bureau for HF contacts with VE3XDX spread over the last 3 years. The trouble is VE3XDX is a 2 meters PacketCluster station in which Paul is the sysop.

SQ, POLAND. Jean Claude, F5LEJ, will be signing SQ5LEJ from July 22th to August 4th. He will be active on CW and SSB on all bands. QSL via homecall.

VU7, ANDAMAN ISLAND. Both QRZ DX and the DX News Sheet states that Jim, VK9NS, has delayed his trip to Andaman until the first week of September, due to customs clearance problems with Mani's, VU2JPS, equipment.

>Please forgive the snotty, bum steer type, none answers from the Amateurs
>Radio Operators Jim AH6NB, Pat K5ETX, and Eugene KC0RL with your
>question. Their type of attitude and way, is most unfriendly. Their
>display of their snotty attitude in written form is the same thing that
>new people hear over the amateur radio that pushes a lot of good people
>away from amateur radio. One of the reasons why cb radio stays so much
>alive. Then they bad mouth us cb'ers.

You're calling them names and say *they're* bad mouthers?

>The Q codes are used as abbreviations to shorten the amount of letters
>sent by a operator using Morse code. However there is no law that says
>you can't use them for a abbreviation for SSB.

There's no law that says you can't stand on your head atop your antenna,
but folks will surely think your a nut for doing so. Same with using the
below list of Q sigs.

>Even operators that aren't
>snotty use them on the ham and cb bands, using SSB.

If you use the below list on SSB *everyone* will be snotty to you!

>Why people get so
>upset and rapped around the axel over someone using Q codes on SSB is a
>small and insignificant thing. From now on I will use Q code
>abbreviations on SSB.

You'll be called a lid of you use any of the following on SSB:

>QRG Will you tell your exact frequency?

In 20 years on HF I've never heard this used on SSB

>QRH Does my frequency vary?

nor this

>QRI How is the tone of my transmission?

only applies to CW

>QRK What is the intelligibility of my signals?

never heard this used on SSB; but your article is QRK0.

>QRL Are you busy

No one uses this on SSB; instead one would say "Is the frequency in use?"

>QRQ Shall I send faster?
>QRS Shall I send more slowly?

Folks will think you landed from Mars if you use those on SSB.

>QRW Shall I inform ... that you are calling him on ...kHz?
>QSD Are my signals defective?
>QSG Shall I send ...messages at a time?
>QSM Shall I repeat the last message which I sent you?
>QSN Did you hear me on ...kHz or ...kHz.
>QSP Will you relay to ....?
>QSU Shall I send reply on this frequency, or on ...kHz?

None used on SSB

>QSV Shall I send a series of Vs on this frequency or ...kHz?

Yeah, try sending Vs on SSB.

Jay, you're foolish if you think you can use any of the above
on voice and you'll be understand. Please don't provide such
ridiculous suggests to new hams.

If you're as much as a renegade on the radio as you are on the net (more than 79 characters per line), then it's no wonder you can't find anyone intelligent to talk to. =:o

There are quite a few very interesting things you can do in amateur radio without talking to anyone. Maybe you should explore those avenues. Here's my latest project: The water in some harbors will oscillate at a resonant frequency determined by many factors in its design. This resonant water wave (called a seiche - it is a standing wave) is not welcome and can be destructive to boats, docks and other structures within a harbor (you can create such a standing wave in a bath tub; the seiche in a tub will have a period of about two seconds). I've set up pipes in various places around a harbor - each pipe has a different size hole drilled in its bottom so that the water level within it will only react to a wave of a certain period (depending on the harbor, a standing wave can have a period anywhere from 4 minutes to 30 minutes or more; the smaller the hole in the pipe, the longer the period wave that will be meausured). Within each pipe is a carbon rod; as the water level increases the resistance measured across the pipe and rod decreases. This varying resistance varies the note of an audio oscillator fed to a QRPp xmtr (note an EPROM keys each audio oscillator with my callsign). I have several receivers on my sailboat that monitor each xmtr and collect data from them.

Since you feel you're more intelligent than any hams you've chatted with I'm sure you can come up with some neat uses of amateur radio that don't involve talking with anyone.

I am considering buying a Saturn and would like to know if anyone out there has
had any EMC/RFI problems with one. I will be running 25-50 watts. If you have
had any problems how did you solve them. Any info on this will be greatly appreciated.

My new SW2 has a 742 tribander and works great on 2 and 220. The 440
side unlocks the doors but I bet I will be able to fix that when I get
around to it. I have the keyless entry and a third party alarm on the
doors so I'm not sure which is the problem.

Yes, ordering pizzas is a very good application for your cellular
phone. Ordering pizzza over 2m just doesn't seem to do much to help
justify amateurs' continued use of that valuable portion of VHF
spectrum.

Pasquale, you can find an excellent prefix/country list at "Welcome to the NG3K Amateur Radio Contest/DX Page" it is at URL:

http://cpcug.org:80/user/wfeidt/Dxcc/dxcc.html

It gives a DXCC country list plus the lesser prefixes. For example: HP is Panama -- it also gives 3E-3F, HO-HP, H3, H8-H9 as prefixes for Panama.

5880. QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-21 00:00:00 UTC
From: jlowman@netcom.com
Message-ID: <jlowmanDuvCGL.BKr@netcom.com>
Source record: 220751

I was first licensed in 1966, but have not been active on HF, other than Field Day, for many years; mostly thanks to college, military service and career and family demands. Now that everything is in place, I'm back to hamming once again.

One of the things I've noticed while hanging out on the ham radio newsgroups and mailing lists, is that some aspects of QSL practices have changed; at least, so it seems.

One lengthy thread from not long ago discussed hams who don't send QSL cards. It seems to me that the way I used to do things, was to discuss the exchange of QSLs near the end of the conversation. I've been told by the other operator that he doesn't QSL, doesn't QSL except for DX, etc. Well, at least I knew not to expect a card in return.

Now it seems that the standard practice is to send a card, in an envelope, with a SASE or "green stamp" enclosed. I can well remember most cards in the 60s were just stamped and tossed in the mail, thus getting the best postage rate.

If some of you could answer these questions, it will help me greatly. I am getting ready to place an order for QSLs, and looking forward to working many of you.

1) Do you send your own QSL card, in response to an "unsolicited" card arriving in your mailbox?

2) Do you send your card in an envelope?

3) ...with a SASE or "green stamp" enclosed?

4) Do you QSL 100%, under some circumstances, or not at all?

5) Do you believe that all pertinent info should be printed/written on the *front* of the card?

Please feel free to add conditions (DX only, only when pre-arranged, etc.) and any other comments.

While we're at it, I see a real deterioration in the quality of QSL cards, based on most of the samples I have received. Most look so cheap, I'd be ashamed to send them out. Lots of samples were just printed on card stock, which I could do with my graphics software and inkjet printer, so why involve a middleman?

I realize that most hams operate on a limited budget, postage rates have gone up (especially if one pays postage both ways) and none of us ever seem to have a lot of time, so I'm not being critical; just trying to do the

right thing.

Thanks in advance and 73 de Jim - KF6CR

I reply to any card I receive and think anyone should.

>
>2) Do you send your card in an envelope?

I send it the same way I received it in most cases.

>
>3) ...with a SASE or "green stamp" enclosed?

I do that only if I really need the card and it is a rarer prefix or
if requested nd I want the card.

>4) Do you QSL 100%, under some circumstances, or not at all?

No, 100% is wasteful and not needed. I do 100% to cards received
though, only courteous.

>5) Do you believe that all pertinent info should be printed/written on the

Have you priced cards lately. They cost A LOT and you can save a lot
by getting cheaper cards. On the other hand what if you do spend an
extra 40 bucks for three years worth of cards. IMHO well worth it. I
see no excuse for sending junk unless the person truly can't afford
better.

You can see from all the above that there are varied methods and
opinions.
Find a method that works for you and, PRACTICE, PRACTICE, PRACTICE. I
took
me about 5 months to get to 5 WPM. I memorized the basic letters from
the
'rhythm of the code' tapes and worked from there using Supermorse 4,
and
a weekly class with the local HAM CLUB I belong too. I worked at it for
about 60 minutes a day in three 20 minutes sessions. Personally, I'm
waiting for the
WARC '97 results before I decide to go on to 12.

'73, and thanks for reading.

Zack,

I recently did a temporary installation of a 100 watt
Spectra in my wife's car for vacation. Had no problems
whatsoever. I did put a mag-mount on top though
as I was leary of radiating that much power back into
the passenger compartment. I also wired the radio directly
to the battery. (Actually, this is a necessity because of the way
the power is distributed through the car.) On the '95 Saturns
there is a convienient place to attach you cables where they
come off the battery and go into the underhood fusebox.
This is about a 6 inch run of what looks to be 6 gauge wire.

The roof tops of the Saturns are not flat, so any mag-mount
you may use will need a very good magnet in it.

If this is to be a permantent installation, I would dril the hole in
the top and use a mount that will accept a cellurlar phone antenna.
That way, you could exchange antennas for different purposes
and have something as a value added feature when trading the car in.

The only real problem I encountered was with spark plug noise.
I am happy to say the engine ran fine and I didn't
set off the air bags!

73,

Bruce, WB4YUC

I would not make this assumption. The definition of what is
transmitted for "general reception" is very vague. And there
is no way of knowing, if you puck up a radio transmission,
whether it was intended for general reception. Are beacons,
V-markers and such like permitted? I doubt it which is why
people are warned to steer clear of this form of DXing.

5886. Re: Do we have any young hams?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: Rick Miller <rick@DigalogSys.com>
Message-ID: <Pine.LNX.3.91.960722124208.3591B@net.digalogsys.com>
Source record: 220557

Hi!

I just got re-licensed a week ago! (Tech-plus) My first, Novice,
ticket was got at age 12, but I let it lapse since the code didn't
thrill me and I didn't have the electrical know-how to upgrade.

Anyway, I got in at a young age because my dad *bet* me a transceiver
that I couldn't do it. "I didn't learn Ohm's Law until I was in
college" he said. "You can't do that... but if you could, I'd buy
the radio." I studied all summer, and got my Novice ticket just
before school started.

Now, I'm an Electrical Engineer with Navy Morse training. The only
reason I didn't go straight for General is that I'm not up on all the
FCC regs like I should be and my 4-year-old son was with me for the
testing! Probably before the year is out... That's before I'm 30.

I might have wound up mopping floors for the rest of my life if it
hadn't been for the challenge of that summer.

Rick Miller, KB9OBN (was KA9JHH, back when I was 12)

5887. Re: JAMMERS ON 2 METER

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: Phil <pmetcalf@xyplex.com>
Message-ID: <4t0bl7$rnr@cronkite.xyplex.com>
Source record: 220558

Josh:

The biggest problem with nailing one of these guys is there ability to sense that thay are close to being found and ducking back under the rock from wence they came.

A successful tactic for someone who repeats his performance is to have people ready to DF the signal (repeater input if using a repeater) the moment he interferes. Sounding a little aggravated while your trying to communicate helps. I know, I know, we are all told to ignore the jammer, but keep in mind that to keep him going long enough to get a fix on him requires his presence, after all he'll stay there as long as he is aggravating someone. If you go away, so will he.

Tips:

Don't let him know your hunting him or he'll disappear.

Ask some of you GOOD HAM friends know what is happening. Ask them to monitor whenever they can and be ready to DF the guy when he starts up. The more the better for an accurate fix.

BE READY with your DF gear. He may only give you a few chances to get a bearing.

Once you have located the perp, gather a TON of violation info on him with dates, times, incidents, and WITNESSES. Send the FCC a certified letter requesting an investigation. When he gets probed, he'll realize he's been made even though he wiggles out of it. DO NOT RESORT TO VIGILLANTIISM, the penalty to you for invoking you justice may out weigh his penalty.

Closing:

You can track this slime with some simple antenna designs and an attenuator. Your HT is more than enough.

Hope this helps!

--> Phil KA1NHZ

5889. Cellphone Uplink Amplifier/rptr help?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: RMJ <reese@farallon.com>
Message-ID: <31F4118C.B2@farallon.com>
Source record: 220560

I am in search of a Cellular Telephone Uplink/Downlink =

amplifier/signal booster (with the best power possible) to =

boost/repeat various small handheld cell phone calls (e.g. StarTac, =

MicroTac, Sony Micro, Computer-cellmodems, etc.) used by myself and =

visitors in marginal signal strength cell areas. This would =

essentially be a personal "cellular micro-cell"/repeater. I =

understand that some stores that =B3sell=B2 cellular telephones have such =

things in-house to make the "products" sound (and sell) better (& and =

some corporations & hospitals use this kind of thing for in building =

use...)

I figure this newsgang would have some ideas on this.

I have 2 problems to solve:

1) For a _building_ at the edge of a marginal signal strength cell =

area. I would like to find (commercial or custom) a roof mounted =

antenna (array) that would get, amplify, and re-broadcast all cellular =

calls (e.g. 860-905MHz) through-out the building and yard, and =

visa-versa. Thus incoming and out going signals would not be dropped =

(or stomped-on). PS: I am not looking for things that require any kind =

of wires attached to the cellphone(s).

2) For a _car_ that travels through marginal strength cell areas; the =

same problem. I have tried (several of) the passive antennae (with =

poor/unnoticeable results) and have seen (but not yet tried) the new =

active "uplink antennas" e.g. the: =

<http://www.hello-direct.com/cat-bin/sendpage/cellantuplink.html> but =

I understand that the cellphone must be inches from the internal =

antenna. PS Again: I am not looking for anything(s) that require wires =

attached to the cellphone, & yes in one car I have the 3Watt mount =

booster/speakerphone etc... but the idea is no wires, just better =

function for any/multiple handheld cellphones (computer/cell modems) =

in the same car.

What is the best way to go with these 2 problems. Knowledgeable help =

or educated ideas are welcome (I'm sure others have these same =

problems).

Regards
reese@farallon.com

5890. Force 12 antennas

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: k0hb@hamlink.mn.org
Message-ID: <838035889.AA06863@hamlink.mn.org>
Source record: 220561

KB0OXD asked:

> "...what exactly is a Force 12 antenna??"

"Force 12" is a brand name for a line of HF antennas.

KB0OXD also asked:

> " what's the beef behind no-coders like myself from replying to this
> post??"

No beef from me, or most of us here Pat. We could care less
how fast your code speed is (or if you can even copy Morse) so
long as you contribute thoughtful, interesting, or even just
funny messages. Perhaps if you don't make a "deal" of your
Morse speed (or lack of same), nobody else here will either.
As a matter of fact, there is no requirement that you even be
licensed to participate here. (But you already knew all that,
so why don't you just drop your defensive attitude and enjoy!)

(Speaking for K0HB)

5891. Re: QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: n1ist@netcom.com
Message-ID: <n1istDuyJ19.EC8@netcom.com>
Source record: 220562

In article <jlowmanDuvCGL.BKr@netcom.com> jlowman@netcom.com (Jim Lowman) writes:
-1) Do you send your own QSL card, in response to an "unsolicited" card
- arriving in your mailbox?

Yep, of course. (except if it is a bad one [busted call, etc.]; then I
return it with a note)

-2) Do you send your card in an envelope?
Yes. They would get pretty chewed up otherwise. I also picked up a nice
box of envelopes that look like greeting card (or perhaps wedding invitation)
envelopes at a local thrift shop. I use these for DX cards that aren't
going somewhere with "radio club" or similar in the name (to limit
green-stamp theft)

-3) ...with a SASE or "green stamp" enclosed?

US cards go out with SASE's (Haven't tried the US buro yet; will probably
fo them that way for the next contest I work...) DX cards either go out
via the buro (if I remember; I'm moving, and just found an envelope of cards
that should have been sent out a while ago). If it's something I need badly,
like a new country or state, it will go out with a SAE and green stamp.

-4) Do you QSL 100%, under some circumstances, or not at all?

I QSL 100%, though it may take a while before I run off the cards.

-5) Do you believe that all pertinent info should be printed/written on the
-*front* of the card?

DX stations and managers prefer that. I do it since it is much easier
to print a single-sided card.

-Lots of samples were just printed on card stock,
-which I could do with my graphics software and inkjet printer, so why
-involve a middleman?

What's wrong with that? I wrote a program that takes my log book and
generates filled-out cards for any unsent contact. I print mine on
index-card stock with either a laser printer for my regular B&W cards,
or an ink jet for the color ones. I don't see any real reason to go out
and have cards made up when I can make (and customise) my own; I guess
it's just the homebrew spirit in me...

5894. New Feature on "This Week"

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <JhHt-io.sanderman@delphi.com>
Source record: 220565

Bill Continelli, KE2XB, begins a new feature this Saturday, July 27th, on "This Week in Amateur Radio". Bill will take us back to the dawn of amateur radio as he opens the "Ancient Amateur Archives". Based upon his research and writings in the Schenectady Museum Amateur Radio Association newsletter, the "Ancient Amateur Archives" describes the work of early radio pioneers and the efforts of some of the first "hams" on the air. In the future, Bill will also discuss the evolution of the amateur activity from spark, through CW, voice, and data modes. But the politics and personalities of radio's history is what sets this semi-weekly feature apart from the rest.

Tune in this Saturday at 9:00 PM (EDT) for edition #174 of "This Week in Amateur Radio", carried on nets and repeaters throughout North America via the "W0KIE Satellite Network" on Hughes SBS-6, transponder 13B upper, 6.2 MHz audio, at 12.031 GHz and on 160 meters at 1860 kHz. (Here in the Albany-Capital District, "This Week in Amateur Radio" is carried exclusively on the WA2OQE repeater in Troy on 145.33 MHz. Replays are aired Mondays at 8:00 PM.) Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Hello My Name is Doug and the Qth is Yucaipa California about
100 miles east of Los Angles. I have for sale a Yaesu FT-530
and a list of goodies....

Ft-530 with expanded TX/RX Mod
RX 110 to 180 200 to 500
TX 130 to 180 400 to 470

Unit is Very good condition minus a few
minor cosmetic scratches. This Radio has
always performed flawless... It is a hard to
let go of!

Features: CTCSS incode/decode 82 memory channels
two vfo for each band dtss squelch and paging 10
dtmf memories built in VOX dual vhf or uhf RX full
duplex cross band 4 power levels independent volume
and squelch for each band and much more I cant remember.

Included:
MH-29 Multi-function digital display Speaker
mic.

3 fnb 25 7.2 600mAh batteries (2 brand new)

1 fnb 27 12 800mAh battery

1 CSC-56 Yaesu case for use with fnb25

1 cigarette lighter adapter

1 power cube for charging fnb25s

1 power cube for charging fnb27

Price $ 400.00

I have all the original packing boxes and manuals.

Am still hoping some old timer out there in CW land can answer the
following questions. When I was a commercial CW opr for Paa in Latin
American Division, we used CW for all ptp operation, and we inherited
from ex railroad oprs some strang useage of code that stemmed from
continental morse. Some are easy to figure out, the others not.

1. di di dah di dah (eek) in morse meant di di=o dah di dah =k
hence instead of international cw ok you used continental
morse for the o and international morse for the k
2. There was a "rj" inherited from continental morse also. It
meant "changing operators wait" to the railway operaters
but I can figure out what letters in continental morse relate
to "rj" in international morse. It may have been a mutation
type of thing and instead of "rj" it could have been something
like di ah di di dah dah dah (which I gess would
convert to a c o (maybe the c o would be "change oprs"
but how the a figures in I dont know. Help some of you
guys in your 80's who preceeded me by a few years.

> you for alerting the amateur community to this.

Unless he does so in an action where he tries to represent both parties
in a dispute at the same time, how on earth can he be in conflict? Why
can't a lawyer ethically represent the ARRL in one case and the SBE
people in another? The mere fact that one lawyer represents two
different parties doesn't mean that he's representing them against each
other at the same time.

>orders on their system, respect that decision.

Then they can close their repeater system. If I come across an open
repeater and I wish to use it in a manner that has been approved by the
FCC, I will do so. If someone has a personal problem with that, they can
close the machine.

5901. Re: QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Jul22.144446.3752@ke4zv.atl.ga.us>
Source record: 220572

In article <jlowmanDuvCGL.BKr@netcom.com> jlowman@netcom.com (Jim Lowman) writes:
>If some of you could answer these questions, it will help me greatly. I am
>getting ready to place an order for QSLs, and looking forward to working
>many of you.
>
>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Sometimes. But it seems recently most of the purported contacts for
which I receive a card were really made by Slim, so I usually return
the card with a note to that effect.

>2) Do you send your card in an envelope?

When I send reply cards, I do use an envelope. I don't want the card to get
dog eared in the mail, and I usually include a letter with some personal
remarks about the contact.

>3) ...with a SASE or "green stamp" enclosed?

Never (because I don't send cards except in return for cards received).
But I'm much more likely to send a reply card if a SASE is included.
If I *did* send out unsolicited cards (which I don't), I would include
a SASE if I wanted a reply.

>4) Do you QSL 100%, under some circumstances, or not at all?

No, I don't QSL 100%. I probably don't even QSL 1%. The only time
I send a card is in return for a card received (and then probably
not 100%, or right away, just when I accumlate a stack of them).
I don't want to deny someone an award just because I don't compete
for awards.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

Doesn't matter as long as the info is on there somewhere so I can
confirm it. I won't reply to a card that is incorrect (though if
they included a SASE, I'll send it back with a note explaining why).

>Please feel free to add conditions (DX only, only when pre-arranged, etc.)
>and any other comments.

As I noted above, I don't normally send out QSL cards. I don't collect
them, and don't particularly want them. However, I will usually reply
to someone else's card if requested. I don't care if he's 3 blocks away
or in Timbuktu. If we made the contact, and he wants a card for whatever
reason, I'll send him one. I'm much more likely to reply promptly, however,

if he takes the work out of it for me by including a SASE.

>While we're at it, I see a real deterioration in the quality of QSL cards,
>based on most of the samples I have received. Most look so cheap, I'd be
>ashamed to send them out. Lots of samples were just printed on card stock,

>involve a middleman?
>
>I realize that most hams operate on a limited budget, postage rates have
>gone up (especially if one pays postage both ways) and none of us ever seem
>to have a lot of time, so I'm not being critical; just trying to do the
>right thing.

Well, I still have some very nice cards I had printed when I was first licensed in 1963 (like most new hams of that day, I got QSL solicitations from the printers before I received my license from the FCC, and found out what my new call was to be that way). They cost $4 a hundred back then (4 color printing, nice emblems and all). But they've got the wrong call sign on them now since I traded my old General call for an Advanced call.

When I priced new cards, I nearly had heart failure. I bought some of the cheapies just so I'd have something to send to those wanting cards, and they still cost more than my "nice" cards did. Postage has gone up 10x too. I could actually afford some nicer cards because I only send out a few, but since I'm not in the postal card collecting game (or the award chasing game), I can't justify spending the money just so someone else can count coup with a pretty card. (In fact, I must admit I picked the ugliest card I could find just for the hell of it.)

Even though I'm not too good with HAM raidos I think I know how they transmitted, and executed the vierus. If you noticed on onepart of the screen there was some black and white 'fuzz' on the screen. That was a binary code set to the Aliens code, the virus was transmitted using that code via radio, and the virus was executed by that same code. I hope that clears everything up.

Hello to all. Does anyone know of a good source on radio mods. Possibily a www site? I have seen a few, however it does not seem to be current. I am going to buy a IC-706, and would like to know what the full capabilities might be. Thanks, Mike K6YPB

Perhaps you've heard of the phonograph? The equipment used to make records was quite similar to that used to play them.

HELLO FELLOW HAMS:and FUTURE HAMS !!!!!!!

HAM BBS dedicated to amateur radio !!!!

There is a DEVOTED AMATEUR RADIO BBS in town ,from your
ARRL/LAX affiliated club coordinator , JOE CIRA , KB6AXK ....
Everything and anything about AMATEUR RADIO will be found here,
IF NOT ? Let me know and we will post it and file it !!!!!!!!

HAM*INFO*LINK*SOURCE BBS at 1-818-584-1952....
24 hrs,8-n-1,anyspeed.......
running 486/66 with 2.1 gig of space !!!
qsl route database,clubs,newsletters,bulletins,shareware,utility
mods,programs,test ques,lists,software and much more....
VEC/VE exam & class list for all So.Cal.
sample exam tests and answers for all class's..
ARRL mirror of all there files !
Using Wildcat v4.11 software..
easy to log in and no FEE's it's FREE !
6,000 FILES IN 119 FILE AREA'S..so far !

latest list of AMATEUR RADIO WEB SITES & PAGES
now 2,405 websites & pages !!!!!!!!!
and GROWING FAST ?!?!!

P.S. also available on the web at:

http://www.padl.ac.at/schule/chemie/bob.htm
look for web-sites by KB6AXK on the page........

FYI:there are roughly ,over 33,000 pages,just pages,
that relate to amateur radio/ham radio on the web ???????
My list is primarlly websites..............

5909. Re: QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: pacrimgolf@kuentos.guam.net
Message-ID: <4sv096$dol@lehi.kuentos.guam.net>
Source record: 220605

jlowman@netcom.com (Jim Lowman) wrote:

Jim, I guess this discussion should revolve around who we are talking about. QSL practices by someone in Iowa who is a 'casual' operator would not be the same as someone who is an active DX station in a country other than the U.S. I'll try and answer your questions from my perspective.

>Now it seems that the standard practice is to send a card, in an envelope,
>with a SASE or "green stamp" enclosed. I can well remember most cards in
>the 60s were just stamped and tossed in the mail, thus getting the best
>postage rate.

If you have a contact with another station in the U.S., and you both want to exchange cards as memorabilia, nothing wrong with sending them as postcards. Other than the fact the post office will do a little stamping, banging, and machine mutalation on the cards. If you work a station in another country that you would like to exchange cards with, the envelope method will definitly preserve the cards. If you are working on your DXCC, or another award, and you worked the DX station solely for the card, then I would suggest it is your obligation to provide return postage for the card you need, i.e., IRC's or green stamps. If the DX station has a QSL manager, an SASE and return postage is assumed mandatory.

Briefly, here's why SASE's and return postage are necessary. I have worked 47,862 stations on HF in the last 9 years from Guam. If they were all U.S. stations (which they weren't) and I sent everyone a card at todays postage rate ($0.32), the postage would be $15,315.84, not including the cost of the cards/envelopes. And not including the time required to address 47K envelopes. The SASE saves the DX station or QSL manager a lot of time. The return postage or IRC's make it possible for the DX station to answer cards in volume. Some stations here in Guam that were very active on HF have worked 100K QSO's in a year. It is each hams individual responsibility to pay for his or her own awards, so if you send cards to a DX station with no SASE or return postage, you should not be at all surprised if you get nothing back.

>If some of you could answer these questions, it will help me greatly. I am
>getting ready to place an order for QSLs, and looking forward to working
>many of you.

>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Yes, but only if the card has return postage/sase included. And I
don't answer cards the day they arrive. Usually they go into the
'pile' and get answered once or twice a year.

>2) Do you send your card in an envelope?

Yes, always.

>3) ...with a SASE or "green stamp" enclosed?

If I am originating the QSL card, I always include an SASE, with
return postage and/or IRC's. I am not working on any awards, but there
have been times that I have worked a station that for one reason or
another I wanted a card. For example, at one time I was collecting
cards for 5 Band WAS. If I worked someone in the U.S. and I wanted a
card, I would send mine including an SASE.

>4) Do you QSL 100%, under some circumstances, or not at all?

Most definitly not 100%. I no longer answer any bureau cards. I ran
the QSL bureau here for about 3 years. From what I saw during that
time period, I would say the QSL bureau system is the biggest waste of
time and money known to ham radio. If twenty percent of bureau cards
reach their final destination, I would be surprised. America's most
famous QSL bureau sent thousands of cards to Guam that should not have
been sent here. I think you have about the same chance of getting
cards answered if you throw them out the shack window as you do
sending them 'via the buro'.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

No. On the back is fine. Some cards have nice photos on the front.
Complete information, with GMT date/time is more important than the
location of the information. GMT is very important for someone who
keeps manual logs....

>While we're at it, I see a real deterioration in the quality of QSL cards,
>based on most of the samples I have received. Most look so cheap, I'd be
>ashamed to send them out. Lots of samples were just printed on card stock,
>which I could do with my graphics software and inkjet printer, so why
>involve a middleman?

Nothing wrong with homemade QSL's, if that's what you want to do.
Most people who want cards are not going to put them on the wall -
they are going to submit them for some kind of an award and put them
in a shoebox in the closet. The type of cards you buy depends on your
budget and your operating habits. If a thousand cards will last you
ten years, and three hundred dollars is in your budget, get some nice
photo cards. But don't expect someone who goes thru five to ten
thousand cards a year to be sending photo cards for every contact.
After having seen about 200K QSL cards, I can say there are very few
cards that are 'special' when it comes to design or printing. But
then again, when you think about, there are vey few QSO's on the ham

bands that would be considered 'special' too.

And do your best do dispell the myth that the 'Final Courtesy of a QSO is a QSL'. It is rediculous to QSL every contact. Some people don't collect cards, don't want cards, and don't need cards. I certainly don't need 20 QSL cards from the same station that I have worked on 15 meter SSB 20 times, but I have received all 20 in the same batch. When I use to sort bureau cards, I would see 60 or 70 cards from the same station to other stations in Guam - all the same band, same mode. Horrific waste of time and money.

I got a real kick out of a message I saw posted in the DX newsgroup a few days ago. Somebody is looking for QSL info for 200 stations he worked five or six years ago. Probably the best QSL'ing tip I can think of is that if you work someone today and you want a card, send yours tommorrow. You may wonder why. If I talked to you on the radio six years ago and you are just getting around to sending me a card now, do you really think I am going to drop what I am doing and answer it today, or do you think I am going to throw it in the 'pile' for later ? Or is eveyone you talked to six years ago a) still an active ham or b) still alive ?

To the casual operator, the QSL card may be the final courtesy of a QSO, but to the DX station, it's the price you have to pay if you operate on HF. And if you turn off the radio, you still keep paying for the next five or six years.....

Steve, l didn't see the responses from the hams that Jay is lambasting, so I really don't know what they told you, but I imagine that they said Q codes shouldn't be used on voice. I'm not sure Jay is a ham, as he says 'Then they bad mouth us cb'ers.'

Some Q codes are commonly used on the ham bands on SSB. For example, QSL (confirmation) ORZ (who's next) or QTH (location).

Best advice I can give you on how to talk on the ham radio is talk the same as you would in person or on the phone (minus four letter words that start with F). The Q codes that are commonly used on HF you should pick up in a week. If you are talking to me on HF and want to know what time it is, I would suggest you simply say 'Jim, what time is it ?' as opposed to 'QTR' as Jay suggests. If you are talking to me and want to know where I am, QTH is OK, or 'What country are you in ?' will work too.

Q codes on the ham bands are not the same as 10 codes on the police frequencies, i.e., all policemen know what all the 10 codes mean and

they all use them as standard operating proceedure. Q codes for the ham bands were intended, I think, originally for CW, but a very few have become 'standard' on voice. If you ask a Russian station 'Your QTH ?' you will probably get a quicker response that if you ask 'Where are you located ?'. Not because he is more proficient in Q codes, but because he is less proficient in English.

On your local repeater, Q codes are probably not necessary, as everyone speaks English. 'Where are you ?' or 'Where are you located ?' are probably more 'normal' that 'What's your QTH ?'
'I got it.' or 'I understand.' will probably work just as well as 'QSL'.

I assume the reason you asked the original question is that because when you operate you want to appear 'normal'. If you speak plain English, with no Q codes, you shouldn't have a problem. Throw in a few QTH's and QSL's once in a while, and nobody will notice. But if you start asking people 'QTR ?' as our friend Jay suggests, you will probably get labeled as a newbie or a pocket protector thick glasses two HT toating nerd, or maybe as a 'cb'er' like Jay labels himself. You make the choice.

Hi there. I use the AEAFAX system with a Sony ICF-SW7600G, and it works fairly well, although a better receiver would help. If you must get a digital receiver, get one with an adjustable BFO or an "SSB FINE TUNE". Without the BFO, you won't be able to decode the weatherfax signals with most systems.

>INTERNET ADDRESS; kk5dr@io.com

>"EVERYONE, is entitled to their OWN, opinion."

Matt,
Burt is right about a lot of things. But the truth hurts, so some people just don't want to admit he is. If you stop and consider what 'basic' ham radio is to a lot of people, it's worse than boring, it's enuff to make a moose puke. The only redeeming factor about the hobby is that there are many different things to do, so when one aspect of it becomes boring, you can switch to something else. If you get bored with everything, best thing to do is pack up the stuff and put it in the closest for a few years. When you get interested again, you can always get it back out.

It's cheaper for me.

I'm in my car, heading home from work, and I decide to order a pizza. I have two radio devices in my vehicle, both of which are capable of allowing me to place a call and make my request. One is free of usage charges and the other is quite costly.

Which one will I use? Which one would any normal, intelligent, budget-conscious person use?

> If a fellow is working for two sides of an issue at the same time there
> has to be no proof of conflict. You can not prosecute and defend. There
> needs to be no proof.

Not necessarily, it must depend on how many sides there are. The
question is not whether Chris is working for two sides of an issue
but whether it is for two *opposing* sides. Is there an issue for
which he represents two parties where the advancement of one of his
clients' will come from a disadvantage to the other? If so, then
this would be a conflict. What is that issue where this now obtains
for Chris Imlay, Steve? Is the SBE petitioning for 2m? Is the ARRL
going after the TV bands? Do the parties have conflicting positions
on responsibility for EMC?

> Expressing an opinion that someone in a membership organization is
> out of line is part of the democracy of the organization ... right?

The criticism was not about membership behavior but about the
behavior of a professional employee of two membership organizations
in that employee's professional capacity. Chris did not lose his
rights to defend his professional reputation by joining one or more
of the client organizations.

>Wondering if there are lawyers out there getting huffy about those who
>would question a conflict of interest while claiming the American Cancer
>Society and Philip Morris are "two of their best clients"...

I think you may be being a bit extreme. It is not at all unusual
for a communications lawyer to have several clients who are in the
communications business. There is a possibility of conflict of
interest if two of the lawyer's clients were to come into conflict.
But in that case an ethical lawyer would withdraw from representing
either party in such an action since he would have privileged
information from both parties and couldn't avoid a conflict of
interest if he chose to represent either one in that particular
matter.

(I don't buy the notion that a lawyer can "firewall" his brain
in such a way that he could represent contending clients without
privileged information leaking through, regardless of what the
lawyer's canon may say on the matter.)

I don't think that's the case here. Hams and broadcasters aren't
currently in conflict. And if I read this right we're talking
about two membership organizations, one of hams, and the other
of broadcast engineers. I certainly don't think there's much

conflict there. It would certainly be a question a member of
either organization is entitled to raise, however.

Unfortunately I came in at the end of this thread. I have noticed that some are to quick to jump on those who have made a mistake. I would like to make a suggestion though, when posing a question it would be better to put the important part of it in the subject header instead of "PLEASE READ". There is only so much time in the day and in my case on line time to read posts. One get's good at weeding out the chain letters and "Burt Fisher" nonsense that you don't read those. I scan the subject headings much the same way I do the newspaper. If it is something that I have an interest in or catches my eye I will stop and read it. Just give a clue of what you want and perhaps the answers will come faster and by those who really do help. BTW just about anything written by Gary Coffman is worth reading. He always is helpful and well thoughtout.

so don't give up too quickly.

Howdy Damien. There is a program that will generate Great Circle Maps based on your input of Lat/Long. It is DX Helper sold a few years back. Check older QSTs. I have some paperwork on it --- will send when I find it.

Also check out ---- DX Desktop - Great Circle at URL:

http://206.30.128.143/dxd/gcop.htm

Also take a look at Great Circle Software, Inc. at URL:

5927. Trouble with TM-731A

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: Phil <pmetcalf@xyplex.com>
Message-ID: <4t02g9$r9k@cronkite.xyplex.com>
Source record: 220623

Has anyone ever noticed a strange problem with the Kenwood TM-731A.

Mine seems to have an intermittent problem with transmitting on it's own as long as a mike is attached. It only happens on 2 meters and is getting really annoying since I can't leave the radio on. When it does this it stays in transmit and eventually will burn up.

Anybody experience this or have any clues?

Response is greatly appreciated!

In article <31F385EA.71D3@pez.bell-labs.com> Richard Abbot <abbot@pez.bell-labs.com> writes:
>I wonder if anyone can point me towards a modern, recent study on
>this topic. I'm particularly interested in any warnings
>concerning operation on 2m (proximity, power level, etc.).

Rich, grab a copy of the sci.med EM FAQ. It'll answer a lot of your questions, and point to research work for further information. The ARRL bioeffects committee supposedly has a paper out too. And there's the ANSI standard you might want to examine (though there are those who suggest the ANSI standard isn't strict enough).

Most of the concern at 2m appears to be due to the effects of RF heating. This is pretty well understood and documented. At low frequencies, the field effects seem to raise the most concern since they appear to have biological effects on dividing cells (this is by no means certain, but there have been suggestive studies).

To avoid gross heating effects, you need to keep the power density at your person down to less than 10 mW/cm^2 (some suggest 1 mW/cm^2). The eyes are most sensitive to this heating, so particular care should be taken to avoid directly exposing them to nearby RF fields. In this regard, a relatively high powered HT (generally 5 watts or greater) held in front of your face when transmitting could be cause for concern since the antenna is at eye level, and very close. (A spkr/mic might be a good alternative.)

For mobile installations, where rig power may be in the 30-50 watt range, I'd be particularly careful about thru-the-glass type antennas for a couple of reasons. First, the coax generally radiates and makes the cabin RF "hot". And second, part of the antenna is near eye level outside the glass, and you get a good dose when transmitting (cowl and trunk lip mounted antennas share this problem). A roof mounted antenna is much safer (and much more effective too) because the metal roof shields you from its fields and you are below its main lobe.

While some exposure doesn't seem to have done most hams any lasting harm, this isn't a joking matter. If you expose yourself to the fields of a high power amateur VHF amplifier with its shielding removed, or stare into a high ERP array, you can be blinded in a matter of moments. Even a little HT's rubber ducky may have a cumulative effect.

While the effects of lower frequency RF fields are less well understood, I'd be cautious about placing antennas near people. In particular, I'd be careful about indoor or attic mounted antennas. Outside, high, and

in the clear would be the watchwords I'd live by in order to reduce the field exposure you, or your family and neighbors, might have to endure. Fortunately, your antenna will work much better mounted this way too. (People who fight against tall towers don't understand that it is precisely the tower's height that protects them from exposure to high RF power densities, thanks to the inverse square law, and due to raising the main lobe of the antenna above the local neighborhood.)

We all take risks every day, and amateur radio isn't particularly risky compared to crossing the street or driving a car, but there are risks involved, and it would be prudent to reduce them to the extent practical. The FCC requires us to use the minimum power necessary, and prudence suggests we should mount antennas as far as practical from our bodies (especially out of the plane of our eyes). If we follow that advice, we probably won't have any problems related to RF exposure.

>If some of you could answer these questions, it will help me greatly. I am
>getting ready to place an order for QSLs, and looking forward to working
>many of you.
>
>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Yes - Always!

>
>2) Do you send your card in an envelope?

Yes ... the "modern" US Postal Service equipment has a habit of chewing
up postcards. Mine always go thru OK in envelopes though.

>
>3) ...with a SASE or "green stamp" enclosed?

If you are sending a card to a DX station requesting a card from him/her,
it is customary (and usually expected) to enclose a green stamp (or 2, in
the case of Germany, Japan and a few other countries) to pay for the
return postage.

I always enclose an SASE to hams in the USA when I request a card. Makes
it a lot easier on the other guy!

Imagine if you had just worked 2500 stations in a contest, and 10% sent
you cards (e.g. the recent IARU contest with the unique 1X1 calls used by
the WRTC guys.) It could save hours of the QSL manager's time to have
SASE's in each envelope, not to mention postage costs!

>
>4) Do you QSL 100%, under some circumstances, or not at all?

Sometimes. I often QSL 100% of contest operations. Otherwise, it's a
matter of whether I need or want the other guy's card or not. Looking at
my log, the average seems to be about 10%.

Some DX stations will send "QSLL" at the end of the QSO, meaning they
will QSL after they have received your card ("QSL Later").

>
>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

Yes! This is a MUST for QSLing to DXpeditions who have to handle maybe
60,000 cards. A lot of lost time stacks up in just having to turn over

the card to see the information.

If you do put your QSO info on the back, then also PLEASE put YOUR call
in large letters on the back too!

>
>Please feel free to add conditions (DX only, only when pre-arranged, etc.)
>and any other comments.
>
>While we're at it, I see a real deterioration in the quality of QSL cards,

>involve a middleman?

There really are some beautiful DX cards (even some with foldouts) such
as AH1A, 3Y0PI, 1A0KM, HV4NAC, XZ1A, XR0Y, etc etc. These people went
all-out to make the best cards they could!

SB QST @ ARL $ARLB045
ARLB045 ARRL Board meets

ZCZC AG25
QST de W1AW
ARRL Bulletin 45 ARLB045
From ARRL Headquarters
Newington CT July 22, 1996
To all radio amateurs

SB QST ARL ARLB045
ARLB045 ARRL Board meets

The ARRL Board of Directors met July 18-20, 1996, at Rocky Hill, Connecticut. Here is a summary of the meeting highlights:

The Executive Vice President was instructed to use all available means to vigorously oppose commercial encroachment into the 2-meter and 70-cm bands.

Staff and counsel were directed to coordinate with FCC, and pursue in Congress, legislation that would permit FCC to temporarily suspend amateur operator licenses upon presentation of evidence sufficient to establish intentional violation of the Communications Act or Part 97. Such suspensions would be effective immediately upon issuance by FCC of a suspension order.

The League will petition the FCC for a rule change to permit Advanced class volunteer examiners to administer all examination elements required for the General class license.

The League's Ad Hoc Committee on Repeater Coordination was authorized to continue discussions with the National Frequency Coordinators Council.

In a separate repeater matter, the Board authorized staff, in exchange for supplying repeater data without constraint, to reimburse each recognized local frequency coordination body an amount equivalent to the cost of collecting such data independently.

The WRC-99 Planning Committee was authorized funding to conduct a survey as part of its work in developing recommendations for the ARRL Board. The international Morse code requirement is one topic on the WRC-99 agenda.

The Board congratulated the organizers, competitors, judges, and referees of the recently-concluded World Radiosport Team Championship (WRTC) held in San Francisco and thanked the FCC for its support of this unique event.

The Executive Committee will review current League documentation for the purpose of developing a Board Member Code of Ethics.

The Membership Services Committee will study compliance with band plans, and report back to the Board. The committee also was asked to request the DXAC to study the rules concerning DXCC accreditation.

The Contest Advisory Committee will study ways of better incorporating 50 MHz into existing ARRL contests.

The Digital Committee, having completed its work, was discharged with the thanks of the Board. The membership of the Future Systems Committee will be expanded.

Michelle Ritterbusch, N1PNT, was named recipient of the Hiram Percy Maxim Memorial Award for 1995. Frank Witt, AI1H, won the 1995 ARRL Technical Excellence Award for his series of articles, ''How to Evaluate Your Antenna Tuner,'' in the April and May, 1995, issues of QST. Robert Josuweit, WA3PZO, won the 1995 Philip J. McGan Silver Antenna Award.

Andrew Blackburn, III, WD4AFY, won the 1995 Herb S. Brier Instructor of the Year Award. The 1995 Professional Educator of the Year Award went to David Reeves, KF6PJ. Joseph Tokarz, KB9EZZ, was designated recipient of the 1995 Professional Instructor of the Year Award. Rick Teasetano, N5KLM, won the 1995 Excellence in Recruiting Award.

Full details will appear in September QST.

As we have said many times, the decision whether Newsline stays or goes is yours. If you want this service to continue, we will need your ongoing financial support, and it is needed right now.
The address for the Newsline Support Fund is:

NEWSLINE
P.O.Box 660937
Arcadia, California
91066

This ends the closed circuit with Newsline report number 987 for release on Friday, July 12, 1996 to follow.

(*****
The following is a QST

Electronic filing of comments to the FCC may soon be a reality, a bio-med electronics manufacturer wants access to a ham band and a happy ham radio ending to the story of a school caught in the internet. These stories and more on Newsline report number 987 coming your way right now!

(*****
ELECTRONIC FILING FOR ALL

The Federal Communications Commission has announced plans to open a proceeding to allow electronic filing of formal comments in rulemaking proceedings and online access to those comments. The announcement begins the process of revising outdated rules and clearing the way for the expanded use of new technologies at the FCC.
The Commission announced the rulemaking at an open forum on using the Internet to access information from and communicate with the FCC. FCC Chairman Reed Hundt says the proceeding will allow the FCC to eliminate outdated restrictions, and to use the Internet to better serve the public.
Last February, the Commission issued a Notice of Inquiry in which it asked how computer technology and the Internet could be used to improve FCC procedures. In response, the vast majority of commenters advocated expanded use of electronic filing. The Commission's rules currently require formal comments to be filed on paper, so a rulemaking proceeding will be necessary to allow comments filed via electronic mail or disk to be treated in the same manner as paper comments. Electronic filing of comments will help streamline FCC procedures so that materials can be made

available more quickly, more cheaply and will give members of the public a fuller opportunity to participate in the actions of the Commission, an agency spokesman said.
But there is one strange twist to this story. Because electronic filing is not yet legal, anyone wanting to file comments on this proceeding to make it legal must do so by regular U.S. mail!

(*****
WAIVER REQUEST FILED FOR 1.296-GHZ MEDICAL DEVICE

The FCC has received a request for a waiver of FCC limits on radiation from a medical device designed to operate at 1.296 GHz. The request comes from EDAP Technomed Inc. which manufactures a device known as the Prostatron. The Prostatron uses transurethral microwave thermotherapy to treat a human aging condition known as benign prostatic hyperplasia, or simply BPH.
In its filing, EDAP told the Commission that the Prostatron operates at 1.296 GHz because the wavelength is uniquely suited to the treatment process. Unfortunately, it radiates energy 67 dB above the limit set by the FCC rules.
Amateur Radio has a secondary allocation on the 1.26 to 1.30 GHz band. The Federal government has the primary allocation, for radiolocation, and uses the band mostly for high power radar systems. The FCC's Office of Engineering and Technology is reviewing the request to determine if a waiver should be granted. Since many men over the age of 50 suffer from some level of discomfort brought on by BPH, it is expected that the FCC will grant a waiver in this case.

(*****
REGISTRATION FOR TALL ANTENNA STRUCTURES

If your antenna structure exceeds two hundred feet you are going to have to register it with the FCC. The Wireless Telecommunications Bureau has released a Fact Sheet to explain that most antenna structures higher than 200 feet above ground level or that may interfere with the flight path of a nearby airport must be cleared by the Federal Aviation Administration and registered with the FCC.
The Fact Sheet contains guidelines on applicability, registration requirements, electronic filing, and painting and lighting specifications. After registering an antenna structure with the FCC, the owner will receive a registration containing seven digit registration number that identifies the structure. The owner must provide each tenant licensee and permit holder a copy of the registration. Licensees and permittees must reference the registration number on all subsequent filings with the Commission.
Most home Amateur Radio installations will not fall under the new rules but repeaters are another story. If you have a repeater or a remote base at a commercial site where the tower exceeds two hundred feet, your having a copy of the tower registration is not just a good idea. The FCC says that its mandatory.
For more information, call the Wireless Telecommunications Bureau's Consumer Assistance Branch in Gettysburg, Pennsylvania, at (800) 322- 1117.

(*****
KENWOOD PROCEEDS WITH NEW SALES PLAN

Kenwood Communications Corporation says its proceeding with its recently announced plans to make its products available in more retail outlets. Citing concerns about the future of Amateur Radio and a changing business climate, Kenwood says that it is taking what it calls some bold steps to revamp its wholesale distribution scheme.
The company has already appointed three new companies to wholesale Kenwood Amateur Radio products to any electronic re-sellers wishing to carry the Kenwood line. Kenwood says that its new distribution system will benefit the hobby. This by increasing the visibility of its Amateur Radio line through small dealers to help attract newcomers.
Kenwood also plans to offer a new, free pamphlet about Amateur Radio to introduce people to the hobby. The company will also be selling Amateur Radio study materials and is urging its authorized dealer network to help distribute the new materials.
Kenwood is the first of the companies to make its new marketing strategy public. It probably will not be long before you hear of similar programs from other equipment suppliers as well. While no one will say it publicly, all seem targeted at ousting Radio Shack from its lead position in the entry level 2 meter and 450 MHZ no-code market.
By the way, the FCC lists the number of new first time licensees for the month of May as 3,301. Most came in as no-code Tech's.

(*****
STS-78 WRAP-UP

STS-78 was NASA's name for the latest manned space mission. But in the annals of amateur radio it will go down in history as the twenty first successful mission for SAREX, the Shuttle Amateur Radio Experiment.
The very first SAREX flight back in 1983 was flown aboard the space ship Columbia. And that's the same craft that this time carried two United States and one Canadian ham as part of a crew that set a new record staying in orbit for seventeen days. Mission Specialist Chuck Brady, N4BQW, and Susan Helms, KC7NHZ, and Payload Specialist Bob Thursk, VA3CSA, used their radio everyday. Racking up a total of eleven school contacts around the world, including one conducted in French with students in Grenoble, France. They enjoyed personal chats with their families and talked to fellow hams by the dozen during random contacts.
That packet radio was active. They even sent out a packet message that read in part:

"We made several voice contacts with amateur operators in North America, Africa, Australia, and Hawaii.
The view of the Mediterranean and the Middle East in the morning has been a highlight for all of us. 73 Tom, Kevin, Susan-KC7MCH, Rick, Chuck-N4BQW, Mongo, and Bob-VA3CSA."

Next up for SAREX, STS-79 a rendezvous mission with Mir. A slip in the launch schedule is expected to slip this flight until atleast August.

(*****
SOMETHING NEW FROM SAREX

Space shuttle rise and set times for SAREX missions are now being made available via the World Wide Web for 176 cities across the United States, Canada and around the world. These rise and set times let you quickly determine when the Shuttle will be above the horizon at your location. This information is available via a link from the SAREX home page on the World Wide Web.

(*****
FLIGHT 501 FAILURE VEHICLE EQUIPMENT BAY RECOVERED

The Investigation of the flight 501 failure has been under way since 4 June. In particular, a large part of the equipment contained in the vehicle equipment bay has been recovered and inspected. This has revealed the existence of a malfunction relating to the inertial platforms in Ariane 5 operating mode. The relevant information has been conveyed to the Inquiry Board, which will take it into account in its further deliberations.

(*****
MICROSOFT NETWORK DROPS HAM RADIO

The Microsoft Network does not seem to like ham radio. The online service has abruptly dropped its Amateur Radio Forum according to the former unofficial forum manager Rick McMillion, WB7UGZ.
Rick says that the news of the demise of the network came to him in a rather terse message from the management of the Microsoft Network. The note stated that the Microsoft Network was restructuring but gave no reason as to why ham radio had to go.
In a reply message to Microsoft, McMillion said that in light of a growing ham population and the challenges facing the Amateur service, Microsoft's action couldn't have come at a worse time. McMillion says that he hopes when the Microsoft Network moves to the Internet, it will offer some sort of Amateur Radio information exchange.
Meantime, Terry Stader, KA8CSP, has invited all former users of the Microsoft Network Amateur Radio Forum to join the growing ham radio group on America Online. Stader hosts the Ham Radio Club forum on that rival service.

(*****
ARRL ATLANTIC DIVISION AWARD WINNERS

Gene Pressler, W3ZXV, Maple Glen, Pennsylvania is the 1996 Atlantic Division Amateur of the Year. Among his many contributions to Amateur Radio, Gene was the first president of the Amateur Radio News Service.
And Dwight Hill, K2KWK, of Rochester, New York, is this year's Grand Ole Ham. This lifetime service award recognizes Dwight's contributions to the community. This, through public service communications for sailboat races on Lake Ontario and to ham radio through his twice-weekly bulletin transmissions.
Finally, Bob Bruninga, WB4APR, of Glen Burnie, Maryland, receives the

Technical Achievement Award. Few technical innovations have received more widespread notice than Bob's Automatic Packet Reporting System. Even before he wrote the systems software, Bruninga was recognized as a packet radio pioneer and innovator.

(*****
CLEVELAND BICENTENNIAL

The Cleveland Bicentennial Amateur Radio Committee has been from thirteen Cleveland Ohio area ham radio clubs to promote Cleveland during the Bicentennial year and beyond. There is a "/200 QSL" certification and awards program by which hams in Cleveland can register to become eligible to attach /200 after their callsigns in responding to calls, and by which hams in other areas can receive certificates for logging a certain number of Cleveland contacts with /200 stations. For information about the certification and awards program contact Dwaine Modock, WA8MEM, at his callbook address.

(*****
UK JOTA

From overseas, word that some 220 special GB callsigns were issued to stations for the 38th annual Scouts' Jamboree on the Air which took place last October. Many stations were helping Cubs and full Scouts to achieve their communicator's badges and enabled them to experience the fun of the hobby at first hand by exchanging greetings messages with other Scouts all over the world.

(*****
IRELAND 50MHz LICENSE MODIFIED

Irelands Department of Communications has dropped some of the restrictions to operations on 6 meters. The time restriction to nonbroadcasting hours which was applicable within the service area of a centrally located television transmitter is now withdrawn. Also, the time restriction to 'nonbroadcasting' hours which was applicable within 3 miles of cable TV systems is withdrawn for a trial period of one year.

(*****
NEW FRENCH 6M BULLETIN

The F1FSH French Six Meter Bulletin, previously issued on packet as "@FRANCE" and "@EUROPE" will be soon broadcast "@WW." It will continue being written in French but translations to other languages will be permitted.

(*****
DX

The ARRL's DXCC Desk reports that the number of unprocessed applications at the end of June, 1996 was 53 representing 5,559 QSL's. The desk received 328 applications for endorsements and new awards during the month. In other DX news, XE1L says that the South Sandwich Island DX Group,

SS1DXG, are planning a full scale DXpedition to Bouvet Island for sometime this December or early January of 1998.
And OX3XR, is active from Greenland on 6 meters. Look for Peter on 50.110 MHZ running 60 watts to a Yagi. He is located grid square GP44.
Lastly, AA8U, K8MJZ, and AG8W, will be active from Rarotonga in the South Cook Islands July 11th to the 21st. QSL to AA8U.

(*****
SUBSTITUTE AT HANDI-HAMS SIDELINED

Get well wishes to Maureen Pranghofer, KF0I. Maureen who has been filling in for the recuperating Sister Alverna O'Laughlin, WA0SGJ, at HANDI-HAMS, was herself injured in an auto accident June 30th. Maureen and her husband Paul both were hospitalized as a result of the mishap, which happened near Annandale, Minnesota. This, as the Pranghofers were returning from a family reunion.
Maureen's injuries were to her knees and she underwent reconstructive surgery on July 1st. Paul broke an ankle and some ribs. Both are recovering at North Memorial Hospital, in Robbinsdale, Minnesota.

(*****
A HAPPY ENDING

And finally, a few weeks ago we reported the story of the Phillipston Massachusetts Memorial school whose science fair featured two teens who had gathered 50,000 letters from the Internet. Well this Internet science fair debacle has had a positive side effect in educating the educators there about SAREX, The Shuttle Amateur Radio Experiment.
It seems that a large number of the letters received by the two girls named Stevie and Amanda talked about school contacts to the astronauts using SAREX. This got the school interested in the program.
As a result, Glen Swanson, KB1GW, of the ARRL Educational Activities Department has sent a SAREX package to Mr. William Miganowicz, the Phillipston Memorial School computer science teacher and their principal, Mr. S. Kaczmarczyk.
If the school is selected for a scheduled contact, maybe Stevie and Amanda will get to ask if the world wide web reaches into space.

5936. Re: Learning CW-any pointers?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: armond@delphi.com
Message-ID: <ZVJPHsc.armond@delphi.com>
Source record: 220632

There have been some very good pointers given by previous entries. Here is mine.
It is important to just stay the course, keep with it. For some reason people
think they should be able to pick up the code "just like that". They forget waha
it took to learn to type, drive a car, play the trombone, etc. or whatever.
Just become committed that you will do it. No matter what, you will do it.
It was very very difficult for me. But I stuck with it because I knew it was
worth it. And it was. It is worth any and all the effort you may have to make.
I flunked the Extra CW test twice (at the FCC, 1 min., 100 characters in a row
correct) which made finally passing it all the more worthwhile.

: > careful when you say "ANY reason" - 97.113 does not make such a broad
: > prohibition. You cannot make any communications on behalf of your
: > employer - but that does not mean you CAN'T call a business JUST BECAUSE
: > you work there.

: Most people would be calling THEIR place of business to conduct business
: there....you cannot call into your business and check on messages, etc
: with anyone there...you COULD possibly call a friend at work and get
: together for lunch.....(as friends) but I doubt less than 1% of those
: doing that WONT be discussing the business right?

: So if you wish to push the point, true...you CAN call your place of
: business...you just cannot DISCUSS ANYTHING about the business since YOU
: and your employer/etc could benefit from it....

: As a rptr trustee, I would not allow anyone to call their place of
: business......

This is sooo true.
About the only thing that you could say to anyone at your place
of employment is 'hello'. Just about anything beyond that goes
to the effort of the company. So any thing like the following
is against part 97.

I'm going to be late
I can't make that 9am meeting
Have Janet waiting for me when I get there
Did the flowers arrive ?

It is possible to call and ask for another employee, and have a
non-work related conversation. But, you still need to be cautious.
If the person answering the phone does not understand the nature of
amateur radio, they may inadvertantly ask you a question related to
company business.

Speaking of that, isn't it good amateur practice to never put
anyone on an autopatch that hasn't been briefed on amateur radio ?

When calling my place of employment, I never know who is going to answer the phone, therefore, I cannot guarantee what will come out of their mouth, therefore, I never call my company on a patch.

Cheers
John NM3P

5944. How to reduce radio interfernce???

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: LMNC01A@prodigy.com
Message-ID: <4suuh5$1c08@usenetp1.news.prodigy.com>
Source record: 220640

I just took an old Zenith 158 computer with an 8-bit passive backplane design and installed the interface cards from an old 8-bit expansion box. I used it to add slots to a system that had few available slots.

It works great except that I get radio interference which I believe is coming from the two huge unshielded cables that carry the 8-bit bus between the two computers.

I remember that Zenith's 8-bit H89/90 systems always had heavily shielded cables for their external disk drives. These cables were grounded to the case. I have many of these cables left, but none are wide enough.

I am looking for some suggestions on how to reduce the radio interference. I thought of, but have yet to try, wrapping the cables in foil and grounding the foil. I am hoping to find a better solution.

This is not immediately obvious to me. That's why I believe that the
original author should have substantiated his claim: as it is, he's made a
serious slam against Imlay's professional reputation and ethics with no
proof whatsoever.

I don't suppose it's occurred to anyone that if the SBE and ARRL have been
on opposing sides of an issue that Imlay has let someone else handle the
matter, thus dealing with the conflict?

Neither does the bar. For this reason, an attorney representing contending clients generally must resign from representing either of them.

>
>I don't think that's the case here. Hams and broadcasters aren't

>either organization is entitled to raise, however.

I couldn't agree more. Rather than a knee-jerk threat to embroil the fellow in litigation, a reasoned explanation of why the parties were not at odds with one another would seem to have been appropriate. Was that ever forthcoming? If not, that is certainly cause for concern, in my opinion.

Sure. If your outlet ground (third pin) doesn't have a very low
impedance path to ground (the same ground your antenna, phone line,
and other systems reference), your protector won't touch common-mode
surges. Also, depending on the waveform of the surge, some parts
of your protector may not react fast enough to blow.

Another thing: to pass UL 1449 certification, an AC protector
only has to limit surges to 450 volts or so. Many cheap power
supplies will fry at a lower voltage.

|If some of you could answer these questions, it will help me greatly. I am
|getting ready to place an order for QSLs, and looking forward to working
|many of you.
|
|1) Do you send your own QSL card, in response to an "unsolicited" card
| arriving in your mailbox?

Yes. I have received only one or two DX or VE cards this way, though.
For domestic or VE I send it as a postcard.

|2) Do you send your card in an envelope?

When I started in '92 I sent a lot of domestic cards as postcards,
assuming that was reasonable (since I was willing to respond in kind to
those cards I received, under the assumption I could be sending out as
many as I received, after a while). I since learned some of the problems
with the assumptions I made, but now that I have enough cards for a mixed
WAS (I really ought to send that in) I don't send out as many cards as I
used to. Those that I do usually go to someone who is returning thousands
of cards, as a QSL manager, say, so I use an envelope and SASE.

|3) ...with a SASE or "green stamp" enclosed?

Nowadays, yes (see above), or bureau more commonly for DX if it's not a
special dxpedition.

|4) Do you QSL 100%, under some circumstances, or not at all?

I don't know what this means. Do I QSL every QSO? No. Do I return a
card for every one I receive? Yes.)I do have a stack of bureau cards
waiting to go out that has been accumulating for some months, but they'll
go eventually.) And if my records show that I already sent a bureau card
when I receive a bureau card that says "PSE", I assume
'crossed-in-the-mail' and don't send one.

|5) Do you believe that all pertinent info should be printed/written on the
|*front* of the card?

I don't care. Mine are that way because I bought inexpensive cards that
are only printed on one side.

|While we're at it, I see a real deterioration in the quality of QSL cards,
|based on most of the samples I have received. Most look so cheap, I'd be
|ashamed to send them out. Lots of samples were just printed on card stock,
|which I could do with my graphics software and inkjet printer, so why

|involve a middleman?

I suppose mine are fairly cheap -- they're about the cheapest ones I can order from that company that have a state outline on them, though the stock is one notch fancier than their plainest/cheapest; but I find it satisfactory - who knows if you would? (Work me some time and find out!)

5957. surge protection

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-22 00:00:00 UTC
From: wf3h@enter.net
Message-ID: <4su36o$o6b@news.enter.net>
Source record: 220701
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I recently had a near miss that cooked my modem, modem power supply (dead short), and rotator control box. the control box was disconnected from the tower thru the use of a jones plug, but it was plugged into the wall.
the modem and its supply was plugged into an "EFI" brand surge protector. Surprisingly the surge protector was not damaged. The modem was not connected to the fone line at the time.

i sent the protector back to EFI asking them to honor their warranty which said that if a piece of equipment was damaged while connected to it, they'd pay for it. They refused, saying that part of the warranty (which they dont spell out in the "fine print") says that the surge protector must be damaged for the warranty to be honored. They also said the protector was UL tested.

My questions are these:

1. is it possible for a surge protector to pass a surge without becoming damaged. if so, how?

2. When I was in grad school, i remember a term "warrant of merchantibility". would this apply in this case, in spite of the limited warranty they want to honor?

Don't sweat it - they're also going to eliminate the FCC so there will be
no enforcement, we can all just be pirates.

No, on second thought, that may not work. Even if they can't send us to
jail for pirating, the people who bought the frequencies can sue us for
using them.

> arriving in your mailbox?

Yes, always.

>2) Do you send your card in an envelope?

Yes. because bad weather and a careless postman could end up smudging
the ink and make the card worthless. If my fellow ham needs Louisiana
or East Baton Rouge parish or whatever else I qualify as, I want to
give him a helping hand.

>3) ...with a SASE or "green stamp" enclosed?

If it is rare DX, DXpedition, or a card I need and the ham on the
other end requests it, I will send return postange.

>4) Do you QSL 100%, under some circumstances, or not at all?

I don't send to every station I work, but I QSL back 100% every card I
get.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

Yes, it makes it easier to read when checking the log, I don't have to
keep flipping.

>Please feel free to add conditions (DX only, only when pre-arranged, etc.)
>and any other comments.

>While we're at it, I see a real deterioration in the quality of QSL cards,

When I first started hamming, I was in college, so I used QSLcard that
were 100 for $8.00. I was sending out lost, because I wanted the WAS,
and didn't have alot of money. Limited budgets are a factor.

I am a 28 year old Advanced class ham, and have been licensed since
December 1988. Hope this helps you, please let me know what you learn
from this little survey.

They gotta catch us first! And, given the history of bootleg radio, that's easier said than done, despite the latest advances in technology. Naw, I don't advocate lawless behavior - but these latest challenges to *our* bands are dead serious. Camel's nose in the tent and all that....de KG2DI

>I am looking for a dual band VHF-UHF radio! Anyone have any
>recommendations?

Hi Steven,

The first question what *kind* of radio to get. Although hand
helds are quite popular, there are good reasons against them:

Unless you are specifically interested in operating mostly when
walking around (the cell-phone feeling), a mobile station is *much*
better. (more power, better receiver, more rugged...).

Many OM's are frustrated with ham-radio after a while, because
of the poor range of HT's.

As to the brand, there are some with good quality and a fair price,
e.g. the Alinco.

Now that's just plain not true. I just got my Tech-plus a couple weeks ago at a swap fest in the Milwaukee area (THANKS GUYS!)... I was really surprised by the number of really nice-looking women walking around the place carrying HTs. Yeah sure, they were somewhat outnumbered by all the rest of the so-so-looking women and all the women were outnumbered by us really geeky-looking guys but still I was pleasantly surprised by the number of women in the hobby.

It's sure a lot higher percentage than girls in Engineering school!

4 or 5 years ago my wife asked me what I wanted for our anniversery, I told her I wanted her to get her no code tech license. She thought about it a minute asked if she had to know any code, I answered no, and she said OK, 6 weeks later she passed and 6 more weeks she had a wonderful call. KB5VHF. She had always said she would never get a license. I also had been taking her to some ham functions, not meetings, but service events, Moonlight bicycle ramble in Houston is a great one, and a group of retiries who meet once a month at a mall that she got to enjoy. Anyway sometimes we talk, but she has her own group on a local repeater that she talks to every morning, and is quite upset when she misses them.

Hi Bill - Yes it has been many years since we met and chatted "back East". Was an interesting gathering with all those spread-spectrum folks. Lots of talent there. I sort of lost interest in the project once we lost the possibility of using the ss on 50MHz.

Another reason for not remaining active was that I started building a retirement house in a very remote area of north-central Washington and ALL ham radio activities were terminated. The house is now almost done (year 12) and I am finding more time to get on-the-air and build things again.

You have been busy too - new book and consulting! Hope all are healthy in your family...

73 es tnx for note.

5974. PACTOR/PACKET firmware for hp-200lx

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-23 00:00:00 UTC
From: dickrb@lsid.hp.com
Message-ID: <4t3m3h$pec@hpcvsnz.cv.hp.com>
Source record: 220510

Greetings!

I need to get some software for an hp-200lx palm-top PC that will allow
me to duplicate a pk-232/etc's 'smarts' for use in a backpackers
PACTOR application where weight is important.

An interface between the radio and 200lx could be something small like
the bay-com board. Any hints or suggestions out there?

Thanks,

Dick w7wkr

Interesting quote. I see it all the time. If you actually read it
in context, it explains that the wealthy and powerful few need to
"kill all the lawyers" first, so that they can restructure society
in order that the poor cannot constantly annoy them through the courts.

Lawyer bashing is pretty darned "P.C." these days, eh?

>: with anyone there...you COULD possibly call a friend at work and get
>: together for lunch.....(as friends) but I doubt less than 1% of those
>: doing that WONT be discussing the business right?

Who cares what friends discuss over lunch? When I go to lunch with co-workers the discussion usually focus on Harleys, jetskis and boats. We might even discuss what we are working on. I don't get paid for going to lunch, so what's the pecuniary interest?

>: So if you wish to push the point, true...you CAN call your place of
>: business...you just cannot DISCUSS ANYTHING about the business since YOU
>: and your employer/etc could benefit from it....

I don't think I am pushing a point any more than you are. You said that ANY call to your place of business was prohibited. Your broad generalization was wrong, and I simply pointed that out.

>: As a rptr trustee, I would not allow anyone to call their place of
>: business......

You are perfectly within your right to do that as the station licensee. We exercise tighter than required control over our patch use as well...

I am a control op on a repeater - and we don't let anyone make any calls at all. We don't run a mobile phone service. If people want to make personal, trivial calls they can get a cell phone like the rest of us. The patch is there for control and emergencies. We don't want to babysit a control point all the time just so users can make a "Hi honey! I just left the office and I am on my way home" call everyday. And since just about every call from the repeater site is at least a local toll call, restricting use keeps the cost down.

However if we wanted to run a totally open patch, there is nothing in part 97 that would prohibit users from calling a business just because they work there. It's not necessarily who or where you call, it's what you talk about that part 97 deals with.

There are some exceptions to that. For example you can't place a phone call on the patch to any amateur who license has been suspended or revoked. In this case, who you call is the issue.

>About the only thing that you could say to anyone at your place
>of employment is 'hello'. Just about anything beyond that goes
>to the effort of the company. So any thing like the following
>is against part 97.

> I'm going to be late

Correct - you and your employer have a pecuniary interest in your showing up to work on time. Prohibited.

> I can't make that 9am meeting

Correct - a pecuniary interest. Prohibited.

> Have Janet waiting for me when I get there

Janet may be a co-worker, but who says this is not a personal message. Not necessarily prohibited. I'd give Janet a ride home if she needed one ;) I know an op that regularly calls his wife at her office (he works for the same company but a different facility) and tells her to meet him out front if she wants a ride home. This is a personal call. Although I would consider this a regular communication suitable for another service, it is not a violation of 97.113(a)(3) as you seem to think.

Or is there a rule I don't know about regarding prohibited third party communications to people named Janet?

> Did the flowers arrive ?

Unless you are in the business of delivering flowers, this is likely a personal call as well. Probably nothing wrong with it.

>It is possible to call and ask for another employee, and have a
>non-work related conversation. But, you still need to be cautious.
>If the person answering the phone does not understand the nature of
>amateur radio, they may inadvertantly ask you a question related to
>company business.

You simply say, "I can't talk about that now," and then get back to personal nature of the call. The FCC would take no action against anyone that immediately corrected a potential problem.

>Speaking of that, isn't it good amateur practice to never put
>anyone on an autopatch that hasn't been briefed on amateur radio ?

>When calling my place of employment, I never know who is going to
>answer the phone, therefore, I cannot guarantee what will come out
>of their mouth, therefore, I never call my company on a patch.

I know people that should be more concerned about the calls they make to their own house. I don't call anyone on the patch unless I am reasonably confident that the person answering will act appropriately when they are advised they are on a two way radio system (amateur or other service). The people where I work are professionals and I am not concerned about it.

On the other hand, we had an operator a few years ago call his MOTHER on the patch and woke her up. She went ballistic and starting calling him every name in the book. He was so shocked that he didn't key over her or drop the patch - he just stared at the speaker of his rig in disbelief. A control op that was listening finally determined that he would have to handle it and dropped the call. The FCC knew about it since one of their public affairs people uses the repeater - they knew it was taken care of immediately, we gave some remedial autopatch training to the operator involved, and everyone, including the FCC, just laughed it off.

From: km6xu@wco.com
Message-ID: <4t3kte$ldt@news.wco.com>
Source record: 220519

Drew sez:
> Some other dude sez:

: >Because, Drew, the autopatch isn't free. It's far more expensive
: >to pay for the equipment, power, phone line, etc. for a 2M repeater
: >with a patch than it is to use a cell phone for years.

True.

: It's cheaper for me.

Also true. But are you looking at the whole picture,
or just taking the Generation X'er approach? Your
statement was correct due to the use of the word, "me."
But is the owner of the repeater maintaining it just so
that us yahoos can order pizzas? Probably not.

: I'm in my car, heading home from work, and I decide to order a pizza. I
: have two radio devices in my vehicle, both of which are capable of
: allowing me to place a call and make my request. One is free of usage
: charges and the other is quite costly.

: Which one will I use? Which one would any normal, intelligent, budget-
: conscious person use?

First of all, hams are not normal; you and I are no exceptions!
Second, intelligent and budget-conscious are often at loggerheads.

If somebody brought up the patch on my repeater to order a pizza,
I'd figure that they were either:

(a) Just doing amusing business in public and looking for attention, or,
(b) Just another example of a ham being one cheap mother.

Look at the whole picture. With just the cost of the wire from
my phone line to my repeater's phone patch interface, I could have
paid the cell phone charges to have ordered all of the pizzas
consumed by the White House on the eve of Operation Desert Storm.

Drew later sez:
> Yet some other dude sez:

: >No matter what the FCC deems to be "legal," you should ask your repeater
: >owner what types of transmissions are acceptable on each system. Don't
: >"push" the issue with a repeater owner. If he/she does NOT desire pizza
: >orders on their system, respect that decision.

: Then they can close their repeater system. If I come across an open
: repeater and I wish to use it in a manner that has been approved by the
: FCC, I will do so. If someone has a personal problem with that, they can
: close the machine.

In the little ARRL book, o=open and c=closed. In real life,
it's never that black and white. Drew, if you pass through
my town, you are welcome to fire up the patch and order a
pizza. Does that make it an "open" repeater? Maybe, maybe not.
If you decide to call 1-900-EAT-MUFF, I don't think I'd be too
thrilled about that. Does that make it a "closed" repeater?
You tell me. Sadly, it is attitudes like yours as expressed
above (which I too posessed when I was a new ham and thought
that repeaters were natural resources like trees) that result
in the closing of repeaters.

Cheers -- Mark

Well, it pains me to admit it but Brian is correct. What's the point of having distinct rec.radio newsgroups if folks continuously misdirect their posts to the wrong group? The last thing we need is to see 100+ Motorola sale items listed here daily.

Going a step further, questions regarding equipment and modifications to such are supposed to go to r.r.a.equipment, not here.

And The Mother Of All Debates (code vs nocode) belongs on r.r.a.policy.

Now where's that #%$@&* FAQ?!?!

Tony,
You're probably right, most computer noise seems to come from
the cables. I don't know how big they are, but you could try sliding
the braid off some coax (RG-8 size) and using it to shield the cables.

5986. QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-23 00:00:00 UTC
From: pklein@news.seattleu.edu
Message-ID: <4t412u$7ii@handel.seattleu.edu>
Source record: 220522

Welcome back on the air, Jim! Let me wax philosophical for a moment.

A QSL is many things. For some, it's a fraction of an award. For others it's a memento of a conversation. For others it's a tangible reminder of a faraway place.

For me, it's a bit of all three. I go for the basic awards only--WAS and DXCC on both HF (got 'em) and satellite (working on 'em). Beyond that, I don't really "need" QSLs. But I like getting them. I especially like getting them when they represent a meaningful conversation between two human beings. I can pull 25 year-old cards out of my shoebox (yes, I still use a shoebox!) and remember the conversations.

I remember my first contacts back in 1969 as a 15-year old kid in Massachusetts. How excited I was when the cards started arriving in my mailbox! I remember my first HF voice contact, on 10 meter AM. I rigged up a ground plane with hookup wire tacked to the peak of my roof, with the driven element going to a tree branch above. I went down to my room and called CQ, and was answered by a UO5 (Moldavia in the former USSR).

I was actually talking to the *USSR*! All the guy said was, "my name eez Boris and I don't speak English, but t(h)ank you very much. But it was enough. He sent me a card with a picture of the Vostok rocket on it. It had that odd pastel hue so typical of Russian photos of the 50s and early 60s. Whenever I look at his card, I remember that wonderful feeling.

Since I'm on the West Coast, I have lots of cards from Japan. I'm sure many West Coast DXers value JA QSLs about as much as the rest of the DXing world values W/K QSLs. But some of my JA cards are absolutely *beautiful*! And how do I know that my card isn't special to someone? They may have worked several thousand Americans, or they may not have. If I send out 100 QSLs, and one of them gives someone the feeling some of my favorite cards give me, it's worth it to me.

So, I feel that a QSL isn't an obligation, but it is a courtesy, and an important one.

>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

Yes, always. If I was DX or lived in Delaware, N. Dakota or Hawaii, or was a heavy contester, I might feel differently and want SASEs, but I still would try to QSL anyone who wanted it. I'd just have to computerize my logging and labeling, and I might have to use cheaper cards.

>2) Do you send your card in an envelope?

Usually. I've seen too many cards with nice designs ruined by the postmarks. If postage goes up much more I may have to review that policy, and I certainly don't look down on anyone who doesn't use an envelope.

>3) ...with a SASE or "green stamp" enclosed?

If *I* want the QSL badly enough, yes. If the other person requested mine, I'll simply send the card and hope he/she reciprocates.

>4) Do you QSL 100%, under some circumstances, or not at all?

I QSL any and every contact where the other operator requests it. For DX, I prefer the cheaper methods--the bureau or the station's QSL manager.

I normally QSL most DX contacts. I don't initiate the QSL for DX contacts made with relatively common countries during contests--here I think the burden factor outweighs the courtesy. If I need that country, I QSL immediately via the other operator's preferred method.

I QSL any U.S. contact where the other ham asks for it.

If I really enjoy the conversation, I will initiate the QSL whether I "need" it or not.

I try to use the ARRL outgoing/incoming bureau for any DX contacts where that's OK with the other operator. If I want the country really badly, then I'll send a green stamp or IRCs. If the DX station has a stateside QSL managers, that's fine, too, I'll use it if I want the card, and pass if I don't.

For countries not served by the bureau, I do what I have to.

If a DX ham sends me a QSL direct, I will do the same back.

The one thing I don't like is the "racket" some people (particularly in South America) get into. They will only QSL direct, never through the bureau. And they want one or more "green stamps" or a certain number of IRCs. You send the QSL and wait and wait and wait. Then some months later, his card arrives with a U.S. stamp on it.

Obviously he used part of the green stamps and IRCs to bulk-mail a batch of cards (or a log) to his buddy in the States and pay the U.S. postage. They pocketed the difference. That's not ham radio, that's a business. I can understand somebody using those who pay sufficient postage to subsidize those who don't (some clubs do this), but my impression is that soaking the "rich" Americans is more often the motivation. Because of this, I don't QSL the "only direct" folks unless I need the country or have had a meaningful conversation.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

No, but I believe all pertinent info should appear together on *one* side of the card. The fact that it's repeated on the other side is irrelevant. In other words, if you have a fancy design or photo on the front of the

card with just your call letters and name superimposed, be sure your call letters, name and address also appear on the back of the card with the QSO report. It avoids the other op having to turn the card over several times while filling out and addressing his QSL to you.

>While we're at it, I see a real deterioration in the quality of QSL cards,
>based on most of the samples I have received. Most look so cheap, I'd be
>ashamed to send them out. Lots of samples were just printed on card stock,
>which I could do with my graphics software and inkjet printer, so why
>involve a middleman?

This doesn't bother me. Some people can afford more than others, and some people care more about appearance than others. Also, remember that with computerized logging and label programs, the effort to fill out a QSL is less, so more get sent, therefore more need to get answered.

Hope this helps!

73,
Peter - KD7MW

--- cut & paste from ARRL Bulletin No. 45, July 22, 1996 ---

The League's Ad Hoc Committee on Repeater Coordination was
authorized to continue discussions with the National Frequency
Coordinators Council.

In a separate repeater matter, the Board authorized staff, in
exchange for supplying repeater data without constraint, to
reimburse each recognized local frequency coordination body an
amount equivalent to the cost of collecting such data independently.

This follows a secret meeting of the ARRL "Ad Hoc Repeater Committee"
at the D/FW Marriott Hotel (in Irving, Dallas County, Texas).

This appears to involve a fair sum of money. What League functions
will be eliminated to finance this? How much money is being allocated?

Hans Brakob wrote:

> Just to set the record straight: (with regards to HR 3207)

Since your setting the record straight, can I ask if your
posting this as the ARRL Dakota Division Vice Director
or just as yourself?

I think the best way to "set the record straight" is for
concerned amateurs to FULLY research this bill and the
associated laws and come to their own conclusion.

Some information on H.R. 3207 can be obtained at the following
web sites:

http://www.house.gov
http://thomas.loc.gov

Make sure to look up all the referenced laws as well.

You also can locate your congressman should you wish to
file comments with regards to H.R. 3207.

>From what we have seen others post, and in fact, even by
your own admission, problem OO's are being admitted into
the program (KiloCycle Cops I believe you called them).
While there *may* be some merit in HR 3207, it does not
deserve any consideration until safeguards are put into
place to cleanse the program of this vindictive element.

Should you have some serious concerns about this bill
you can contact Congressman Bill Baker at:

Hon. Bill Baker
10th Congressional District, California
Rm. 1724 Longworth House Office Building
Washington, DC 20515
(202) 225-1880
BBAKER@HR.HOUSE.GOV
http://www.house.gov/billbaker

Also, if you have any direct experince (good or bad) with
the present OO/Amateur Auxilary program, you should consider
filing testimony with the subcommittee on Telecommunications
& Finance, of which H.R. 3207 has been refered to. They can
be reached at:

The Subcommittee on Telecommuncations & Finance
Jack Fields, Chairman
2125 RHOB
Washington, DC 20515
(202) 225-2927
Commerce@hr.house.gov
http://www.house.gov/commerce/telecom.htm

Its importent that amateurs not sit on there collective
behinds and let this legislation slide through unopposed.
Maybe we need something, but lets give it some thought and
make it truly serve amateur radio and not some special
interests. H.R. 3207 in its current form is flawed
and hopefully will be defeated.

Hans Brakob wrote:
>
> I have recently seen (and received) some messages which suggest

> deal for the amateur service. Just to set the record straight:
> --
> 1) OO's have no enforcement powers, and HR 3207 would not
> grant them any such powers.

Well, Title 47, sec. 154 (f)(4)(C)(iii)(II) (which outlines
the powers of the OO/AA's) states: "The functions of individuals
recruited and trained under this subparagraph shall be limited
to - (II) the conveyance to Commission personnel of information
which is essential to the ENFORCEMENT of this chapter relating
to the amateur radio service;". So, while OO's have no ability
to issue sanctions to violators, they provide information
with regards to enforcement of FCC regulations. In other
words, they have the 'ear' of the FCC. HR 3207 would not
grant them any additional enforcement powers, it just would
absolve them of any liability for there actions including
libel, slander, misrepresentation, deceit or interference
with contract rights (28 USC Sec. 2680).

> 2) They perform volunteer duties which would otherwise have
> to be performed by public employees paid by your taxes.
> (In other words, the public is getting something free.)

The VEC program you mean? I don't have a problem with that. But
if your refering to the OO program, what duties are they replacing?

I hate to tell you, but nothing in life is "free".
I'd really MUCH rather see federal employees doing law enforcement.
Instead of trying to promote pork like H.R. 3207 with regards to
the OO program, why don't we just lobby congress to get the
FCC the funds to do their job?

> 3) As volunteers, they risk frivolous and malicious lawsuits
> when performing these duties, and under current law would

> have to defend against such lawsuits out of their own
> pocket.

As human beings, we risk frivolous and malicious lawsuits. I'm
not sure I get your point. Most people act in a responsible
manner throughout there lives, and never see the inside of
a courtroom.

> Many very qualified people have decided not to
> volunteer their valuable services because of this risk.

Its up to the
sponsoring organization to provide liability insurence through
the private sector to their OO's/members. Doesn't the ARRL already
do this? If not, maybe they should consider it. Then again, the
Federal Tort Act is just a taxpayer financed insurance policy. Do
you have any specific data as to how many are not volunteering
because of this percieved risk? It was my understanding there are
currently over 700 OO's in the states.... as I understand it far
more field personnal then the FCC ever had.

> Others, who have volunteered without knowledge of this risk,
> may unwittingly have their savings and property in jeopardy
> of an unwarranted suit by a jerk with an "attitude".

Do you have any data on how many "unwarranted suits" have been
filed against OO's? Its my impression there have been very few,
and even fewer (none??) that the court found was a 'unwarranted
suit by a jerk with an "attiude"'.

> 4) HR 3207 would simply provide these volunteers with the same
> legal defense help they would have if they were paid public
> employees performing these duties.

Problem is, there appears to be no mechinism to rid the program
of the occasional vindictive OO. You even acknowledged this
problem in a earlier post (Kilocycle Cop was the term I think).
Federal employees in a similar role have a required educational
background (4 year degree and/or military background), and
extensive criminal checks are done on there background. There is
also accountability throughout the program.

> 5) If an OO screws up in a fashion that deserves action by a
> lawsuit, a lawsuit can still be filed.

Sure, a lawsuit can be filed. You file it with H.R. 3207 in place
against the OO and it will get kicked out of court. The proper
procedure, if HR 3207 passes, is as follows:

1. Contact the agency in charge of the OO (the FCC) (28 USC 2675).
2. Wait till they reject it, settle or 6 months, whatever is first.
3. Then sue the United States government.
Of course, they make their own rules. The net effect of this

legislation is to make it all but impossible to pursue a effective
action against a OO that may be out of line.

> 6) HR 3207 does NOT increase the powers of an OO in any fashion.

True. Just decreases their need to act in a responsible manner.

> --
> 73, de Hans, K0HB
> --

I realize most OO's are just concerned amateurs trying to
give back to there hobby. But almost everyone admits there
are 'problem' OO's in the program. Before we go giving the
OO program the protection and legal resources of the
federal government, lets clean our own ship up first, OK?

Source record: 220531

Yeah, I've been having subscription problems since the beginning of
the year too. My state and zip code is missing from the address label,
and as there are a number of towns in this country with the same name,
more often than not the mag. does not arrive. Two letters/faxes later
it's still happening, and I haven't had a magazine since the April
issue. In my letters I asked for an acknowledgement, but I'm still
waiting. Actually a couple of years ago they had my country as Austria
instead of Australia, and that took months to sort out. I guess at
least now the mags. are getting to the right country ....

5996. QSL card quality

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-23 00:00:00 UTC
From: oo7@astro.as.utexas.edu
Message-ID: <4t1cbq$pj@geraldo.cc.utexas.edu>
Source record: 220532

I haven't been reading everything in this thread, but I want to put in a good word for W4MPY's services. Get samples from the other places but make sure you get some from him. His prices are good, the quality is fine, there is a range from plain one-color cards up to anything you want, within reason. He'll customize cards, he's fast, and lots of the DXpeditions use his services. He is one of my heros on the CW Honor Roll too, even if he is a Republican. I've never used anyone else for my own cards. I see a lot of cards as a QSL manager, and I don't care much for the ones in 10 gaudy colors with glitter sprinkled on them and a great big Amurrican flag taking up half the space. W4MPY's cards are mostly very straightforward, not cheap-looking, and the sort of thing that a manager is not confused by (I see plenty of cards with cutesy callsign lettering that I can hardly read).

I suppose I should add that I have no connection with his company, I'm just a very satisfied customer. If any of you had an HC8N card from me recently, you got a non-W4MPY one, but that wasn't my choice - they are color cards from a company in Kansas that did a good job too (sorry, I forget the name, but they do a lot of DXpedition color cards too, and are worth getting samples from if you really want cards that have stuff on both sides).

Source record: 220534

Has anyone experienced their electric fuel pump (mobile, of course)
causing noise on SSB? I'm trying to operate 6 meters SSB and I have severe
electrical noise with the engine running. If I simply turn the key on, the
noise starts, and then quits after about a second. I'm beginning to suspect
the fuel pump.
Can I simply insert a small capacitor between the positive and negative
power leads on the pump to cure it? What value is recommended?

> arriving in your mailbox?

If the unsolicited request includes a SASE, I always respond. If not, then never.
>
>2) Do you send your card in an envelope?

See above. I almost never request QSL's anymore, only respond. If I'm requesting,
I always send a SASE or GS/IRC.
>
>3) ...with a SASE or "green stamp" enclosed?

See above.
>
>4) Do you QSL 100%, under some circumstances, or not at all?

The only thing I won't answer are post card requests. I used to answer those, but
the postage was eating me up. Plus, there is just too big a time demand to fill in
the address.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

Absolutely. One-sided cards are vastly easier for the station at the other end to
process.
>
>While we're at it, I see a real deterioration in the quality of QSL cards,
>based on most of the samples I have received. Most look so cheap, I'd be
>ashamed to send them out. Lots of samples were just printed on card stock,
>which I could do with my graphics software and inkjet printer, so why
>involve a middleman?

I know go for W4MPY's cheapest cards. Part of the reason is that I have had to buy
4000 cards just in the last year in order to answer the QSL requests. The quality
of the cards I receive is absolutely irrelevant to me. In fact, the highest quality
cards tend to be the hardest to process, since the sender's call is usually on the
front but all the QSO data on the back.

I too found it quite surprising that someone could make a "no conflict
of interest" claim in these circumstances. My own opinion, for what it
might be worth, is that I see a strong likelihood of confict of interest,
absent evidence to the contrary. Perhaps I'm all wet here, but in my
mind appearances count for a great deal in this matter. Even if there
are no specific actions in conflict, there is the issue of maintaining a
clear and obvious appearance of "no conflict". I would hope the ARRL
management will clear this up quickly. I assume that the fact there is
some "smoke" does not indicate any "fire". But appearances are very
important, and in my mind any potential conflict of interest or appearance
of conflict of interest needs to be dealt with rapidly. We hams tend to
be a bit paranoid about our hobby ...

"Not a lawyer, an ARRL member but not a life member, and concerned."

>>I am considering buying a Saturn and would like to know if anyone out
>>there has had any EMC/RFI problems with one. I will be running 25-50
>>watts. If you have had any problems how did you solve them. Any info
>>on this will be greatly appreciated.

I just called a reliable friend of mine, ZaaX, who has a 1995 Saturn. He regularly runs mobile units and HTs on GMRS and 2Meters. And he uses a cigarette lighter adapter sometimes for the HTs.

He reports absolutely no RF interference or alternator "whine" - nor have I ever heard any while talking to him while he's mobile.

Best thing you can do is take your rig with you. Leave it in the car as you approach a Saturn salesperson. Have your power supply leads terminate in battery terminal clips, so you can pop open the hood and connect directly to the battery. Tell him/her what you'd like to do with your mag mount antenna and your 2M rig while they sit in the car and gun the accellerator for you. If they balk and state that they'd rather you not experiment, go directly to the Sales Manager of General Manager of the dealership. Don't demand, of course...just tell them the value of Amateur Radio to you and the community at large, and the "radio-ability" of the Saturn is of the utmost importance to you.

If THEY balk, just turn around and leave. And find another dealer.

Let us know how you make out!!!

6014. RE: Cellular Telephone Amplifier/Repeaters

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-23 00:00:00 UTC
From: RMJ <reese@farallon.com>
Message-ID: <31F54E4F.2048@farallon.com>
Source record: 220550

RE: Cellular Telephone Amplifier/Repeaters

I am in search of a Cellular Telephone Uplink/Downlink =

amplifier/signal booster (with the best power possible) to =

boost/repeat various small handheld cell phone calls (e.g. StarTac, =

MicroTac, Sony Micro, Computer-cellmodems, etc.) used by myself and =

visitors in marginal signal strength cell areas. This would =

essentially be a personal "cellular micro-cell"/repeater. I =

understand that some stores that =B3sell=B2 cellular telephones have such =

things in-house to make the "products" sound (and sell) better (& and =

some corporations & hospitals use this kind of thing for in building =

use...)

I figure these newsgangs would have some ideas on this.

I have 2 problems to solve:

1) For a _building_ at the edge of a marginal signal strength cell =

area. I would like to find (commercial or custom) a roof mounted =

antenna (array) that would get, amplify, and re-broadcast all cellular =

calls (e.g. 860-905MHz) through-out the building and yard, and =

visa-versa. Thus incoming and out going signals would not be dropped =

(or stomped-on). PS: I am not looking for things that require any kind =

of wires attached to the cellphone(s).

2) For a _car_ that travels through marginal strength cell areas; the =

same problem. I have tried (several of) the passive antennae (with =

poor/unnoticeable results) and have seen (but not yet tried) the new =

active "uplink antennas" e.g. the: =

<http://www.hello-direct.com/cat-bin/sendpage/cellantuplink.html> but =

I understand that the cellphone must be inches from the internal =

antenna. PS Again: I am not looking for anything(s) that require wires =

attached to the cellphone, & yes in one car I have the 3Watt mount =

booster/speakerphone etc... but the idea is no wires, just better =

function for any/multiple handheld cellphones (computer/cell modems) =

in the same car.

What is the best way to go with these 2 problems. Knowledgeable help =

or educated ideas are welcome (I'm sure others have these same =

problems). I will repost a summary of the best results.

Regards

Sharp eyes, Jeff. No, I didn't write the above. Back when I was a
Novice (63), we weren't allowed VFO operation. My first Novice rig
had other problems (got a warning for "rough note") but it was
crystal controlled. Later, (several years later) I got an ARC-5
carcass at a swap meet and used the nice variable capacitor and
gear drive for another project (a FET VFO for a homebrew DSBSC
rig).

>reflex action which key to type when a code character is sounded.

The Navy use to teach people to copy CW with a typewriter. Only
problem with this method is that it is like learning to walk with a
crutch. I had a friend who was a ham and an old Navy CW op. He could
copy 45 to 50 wpm - with a typewriter - and 0 wpm without one. Every
time we heard a pileup on CW he'd have to jam a piece of paper in the
typewriter to figure out who the DX station was.

Unless you are going to apply for a job where you will be sending and
receiving five letter code groups, I see no reason to worry about
getting things down verbatim on paper. I think you would be much
better off to learn how to copy in your head, without a crutch, and
just jot down the important things on paper, like you would do if you
were taking notes during a lecture. I've worked a lot of hams on CW,
but I can't remember any qso's that were important enuff that they had
to be written word for word.

I don't know about over there Clark, but over here the CB band is from 26.000 to 29.990, random channels. To keep things interesting, China has just added some new frequencies - 14.100 to 14.350. Tell your friend to brush up on his Chinese and get a ham license, there will be loads of CB'ers on 20 meters to talk to when the sunspots get cooking again. They're much more interesting than the Hong Kong cab drivers on ten meters, they scream at each other and four or five of them talk at the same time.

Oh yea. One jammer on Long Island was found at the bottom a a flight of
stairs with his head split open.
His freinds went on a jamming frenzy. He became a MARTYR! Vengence!!!
Turns out though that his injury was unrelated to radio jamming or
anyone who knew him. The perpetrator was a stanger.

There is an excellent report that you can download from the FCC Web Server at http://www.fcc.gov. It's a thick report entitled "Measurements of Environmental Electromagnetic Fields at Amateur Radio Stations." The Report No. is FCC/OET ASD-9601. Hope this information helps.

I used a Yaesu dual bander with removable control head in a Saturn - worked
like a dream. Very easy mount in the trunk for the main transceiver unit,
with short coax to trunk lip antenna mount. Seats fold down for easy access.
I also wired it directly to the battery, running the wires under the door
molding. With the radio in the trunk, there were no RF problems whatsoever.

ham - cb,ers

HAM _ CB,ers

strange I can not tell them apart

what ever happend to HAM radio.

I Have turned off all my two meter stuff becuse it sounds Just like
CB
Even worse it sounds like CB did back in the 70's

whats next Is the FCC going to drop lic's alltogether like they did
for CB.

Hmmmmmmmmm NO lic's required 2 Meter radio

Tell me, honestly, how many jammers on 2M do you think have antennas up?
Three of the jammers we've had here lately have been portable stations, most
likely stolen radios. A lot of the time we hear them for a day or two then
nothing else, assumably their battery died and they were too brain dead to
figure out how to recharge it.

I'd like to see you pin someones rubber duck.. They'll prolly kick you in
your 'rubber duck'..

> Can I simply insert a small capacitor between the positive and negative
>power leads on the pump to cure it? What value is recommended?

Oh yes, Earl, I've experienced that on several vehicles. If yours is
a Ford, there's a service bulletin out about it. Ford will install
a filter at the tank to suppress the hash (you may have to pay if the
vehicle is out of warranty).

If it isn't a Ford, you might have the problem anyway. A capacitor
can help, but it usually won't cure the problem by itself. You usually
need an L network consisting of a series choke and a shunt capacitor
installed right at the tank to form a low pass filter. The choke needs
to be fairly hefty so it won't create a voltage drop to the pump, but
needs a fairly high inductance (like a power supply choke), and the
capacitor needs to present a low reactance at the frequencies of
interference (usually a 100 uf and .001 uf in parallel will do the
job).

Before going overboard on the filter, however, check and make sure
the tank is well grounded to the frame (or unibody as the case may
be). If the tank is mounted with straps, it may not be well grounded
at RF frequencies. Of course all the usual body bonding steps should
be taken too. While they might not directly cure the fuel pump noise,
they will help with *any* noise suppression you attempt.

Hi Gary!

You'r right - we all really build upon that which has been done before us. I guess my "problem" has to do with the basic definition of the hobby - ham radio.

HR, tho, today is not just radio anymore. It includes many other disciplines so I accept the diversity in the hobby that exists now. I guess I was just reflecting on one aspect of the game as it was for me more than 40 years ago. Hopefully it is as challenging and fun for the youth of today.

Regards,

Dick w7wkr

I wonder if the reference is to 'speaking in code', a political tactic
used to communicate sometimes extreme meaning in apparently innocuous
phrases.

HEY! Cheap shot - Gary wouldn't do that!! I indeed wrote that. Up until the last several weeks b4 I got my general I used a 6AG7 xtal controlled osc that plugged into the 12A6 socket in the ARC-5. You can be sure I knew I was breaking the law AND was so paranoid about it that I expected the FCC troops to come thundering into my bedroom to slap the cuffs on me and haul me to jail.

That general-paper in the hand was SO sweet...

HELP

6036. Re: QSL Practices and card quality?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-23 00:00:00 UTC
From: Gary Coombs <gary@netsystems.com>
Message-ID: <01bb7840$423f37e0$0100a8c0@gary.netsystems.com>
Source record: 220597

: 1) Do you send your own QSL card, in response to an "unsolicited" card
: arriving in your mailbox?

Always. I think it is part of the hobby. I've enjoyed receiving QSL cards
for 40 years. It never gets old.

: 2) Do you send your card in an envelope?

After seeing how some cards arrive that aren't in an envelope, yes, I do.

: 3) ...with a SASE or "green stamp" enclosed?

Only if requested, or if it is direct mail DX.

: 4) Do you QSL 100%, under some circumstances, or not at all?

100% to all who send me a card. Only to those I want a card from
otherwise.

: 5) Do you believe that all pertinent info should be printed/written on
the
: *front* of the card?

It would destroy the beauty of some cards. Not a necessity for me.

: While we're at it, I see a real deterioration in the quality of QSL
cards,
: based on most of the samples I have received. Most look so cheap, I'd be
: ashamed to send them out. Lots of samples were just printed on card
stock,
: which I could do with my graphics software and inkjet printer, so why
: involve a middleman?
:
: I realize that most hams operate on a limited budget, postage rates have
: gone up (especially if one pays postage both ways) and none of us ever
seem
: to have a lot of time, so I'm not being critical; just trying to do the
: right thing.

It never ceases to amaze me how a ham can spend many thousands of $$$ on a
rig and an antenna and then try to get by as cheaply as possible on a junk
QSL card. I'm thoroughly disgusted with the el cheapo cards you get that
all look alike except for the call sign, just an outline of a state and some
info. Makes you wonder what kind of pride the guy feels, if any at all.
And then he usually has the nerve to display on his wall the prettiest cards
he has received!

A well designed, beautiful QSL card costs a small fraction of the total $$$ spent on this hobby. Make it something you will be proud to send.

Gary, N4OJW (Soon to be my original call, K9IDU !)

>question is not whether Chris is working for two sides of an issue
>but whether it is for two *opposing* sides.

I think we should file this whole thing in the trash, and label it
"too many lawyers." Let's see if I've got this straight:

A member of ARRL and SBE publishes a possibly defamatory comment regarding
a lawyer representing both the ARRL and SBE. The lawyer is also a member of
the ARRL and SBE. The lawyer threatens a defamation lawsuit against the person
who published the remark.

The lawyer was hired to represent both the interests of both groups and the
members of both groups. So he's suing somebody he's already been paid to represent
not once, but TWICE. This isn't just conflict of interest, this is absurd.
We don't need satirists to concoct tales like THIS when we have lawyers around.

I can't wait for this lawyer to get elected senator so he can name Congress,
the Supreme Court, the Judicial branch, and the electorate joint plaintiffs
in a defamation suit when they don't call him "Sir, Senator, SIR!" on the floor.

> happier in the end. The D104 dates back to the early 50's and I think the
> mics today are a lot better.
>
> Regards,
> W0MAY

That is true.
but there is something to be said for the quality of the sound on a
d104. I can tell you that many times when people were using stock
microphones <on 10 meter and -=gasp=- cb> that they had little or no
modulation, were hard to understand, and sounded "tinny"
they switched to d104, and came alive. They could turn the power down
because they could be heard, and their tone was bassier.
There are many older units on the market <not just microphones> that
are sometimes just as good or better than the technological new parts.

my 2 cents...
73's and have a GREAT day!

Regarding some mail I have recieved:

The information I was speaking of was from a letter from the ARRL dated July 1996 titled "Can Ham Radio Survive?" I am sure you can dig up a copy. A short quote from the last paragraph:

"Even now we are watching omnious developments in other areas. For example, did you know our government is auctioning spectrum in an effort to offset the impact of tax cuts and new spending programs. The reduction in the gasoline tax will be financed by selling frequencies to comercial interest." (Isn't that Doles baby?)

> in order that the poor cannot constantly annoy them through the courts.

Well, thanks for prompting me to go look (Henry VI, Part 2, Act 4, Scene 2), but you'e got it completely backwards. It's said by "Dick the Butcher" to "Jack Cade the Clothier." Cade is the leader of a working-class rebellion against King Henry, Dick is one of his followers. These are low-class comic relief type characters. Low-class characters are always instantly obvious in Shakespeare, even when they're not labeled as tradesmen, because they don't speak in iambic pentameter. Cade's describing the classless society he intends to install after overthrowing the nobility:

CADE
I thank you, good people- there shall be no money; all shall
eat and drink on my score, and I will apparel them all in one
livery, that they may agree like brothers and worship me their
lord.

Dick the Butcher then says the words in question:

DICK
The first thing we do, let's kill all the lawyers.

Cade enthusiastically agrees, apparently because he defaulted on an obligation and got sued:

CADE
Nay, that I mean to do. Is not this a lamentable thing, that
of the skin of an innocent lamb should be made parchment? That
parchment, being scribbl'd o'er, should undo a man? Some say the
bee stings; but I say 'tis the bee's wax; for I did but seal once
to a thing, and I was never mine own man since.

So, the people wanting to kill the lawyers here are not the upper classes irritated at lawyers who defend the rights of the poor; they're lower classes irritated at lawyers enforcing the rights of the propertied.

This is taking the quote much too seriously, though. I've never seen Henry VI part 2 performed, but from the number of asides in this scene, it certainly seems to be intended to be played for laughs. So, I'd say "let's kill all the lawyers" is just an old lawyer joke.

Rich

SB QST ARL ARLB047
ARLB047 ARRL receives award

Because of its role in the Space Shuttle Amateur Radio EXperiment, or SAREX, program, the ARRL has been named one of 43 American Society of Association Executives ''Award of Excellence'' winners. The society presents the annual awards to associations whose work best exemplifies the leadership role of associations in creating a positive business and social climate. Educational Activities Manager Rosalie White, WA1STO, submitted an entry earlier this year on behalf of the League. She cited the 50,000 school-age children and youth and their communities affected by SAREX and the involvement of more than 2000 volunteers. The League, AMSAT and NASA cooperate in making SAREX possible.

White's application points to the uniformly positive response from the educational community. She notes that the program has inspired curiosity and interest in mathematics, science and technology and that many schools have incorporated SAREX into their curricula.

''Thousands of ARRL members have done legwork to make hundreds of Amateur Radio contacts with the astronauts successful,'' White's application states. ''ARRL is proud to be a sponsor of SAREX because we know it affects the lives of thousands of youth and adults in a most positive way.''

White said she was thrilled that the SAREX program won the ASAE competition. ''We want it to signify a reward to the volunteers who work so hard to intrigue America's youth to learn about space, Amateur Radio and all aspects of the curricula that teachers innovatively tie in with SAREX,'' she added.

Award of Excellence winners will be recognized at an August 11 ceremony in Boston.

ARRL Bulletin 48 ARLB048
From ARRL Headquarters
Newington CT July 24, 1996
To all radio amateurs

SB QST ARL ARLB048
ARLB048 Electronic filing update

The FCC has announced plans to open a proceeding to allow electronic filing of formal comments in rulemaking proceedings and on-line access to those comments. The FCC said the announcement ''begins a process of revising outdated rules and clearing the way for the expanded use of new technologies at the FCC.''

The action followed a Notice of Inquiry (PP 96-17) in February that asked how computer technology and the Internet could be used to improve FCC procedures. ''The vast majority of commenters advocated expanded use of electronic filing,'' the Commission said. Current rules require formal comments be filed on paper, so a rulemaking proceeding is needed to permit comments filed via e-mail or on diskette to be treated the same as paper comments. These rules do not apply to comments filed in regard to WRC-97 preparations, which already may be filed electronically.

The Commission said ''the challenge of meeting the workload and deadlines of the Telecommunications Act of 1996 has prompted the FCC to seek ways to make it easier for the public to file and review comments'' and is consistent with efforts elsewhere in the government to expand the use of electronic filing by agencies.

FCC Chairman Reed Hundt said the proceeding ''will allow us to eliminate outdated restrictions, and to use the Internet to better serve the public.''

last updated June 24, 1996

o Please report additions or changes to Bob Parnass, AJ9S, office phone: (708)979-5414, electronic mail: parnass@bell-labs.com. Thanks to Dennis Dale and ARRL for providing some of the information.

JULY

Jul 13 (Sat), Oak Creek, WI - S. Milwaukee ARC Swapfest. American Legion Post 434, Shepard Ave. Admission $5. Talk-in 146.52 MHz. Info (414)762-3235.

Jul 14 (Sun), Sugar Grove, IL - Fox River Radio League. Waubonsee Community College, Rt. 47 at Harter Rd. VEC testing. Admission $5 at gate, free parking. Info: Diana WD9API, (708)293-7485. Fair, small to mid-sized hamfest.

Jul 27 (Sat), Pecatonic, IL - Rockford ARA Hamfest. Winnebago County Fairgrounds. VEC testing at 1st Baptist Church, 7th & Washington. Admission $5. Kids 10 and under free. Info, Marsha Plasters (815)399-9233 or Diana White (815)645-8545.

Jul 28 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

AUGUST

August 4 (Sunday) - Peotone, IL - Hamfesters Radio Club 62nd annual Hamfest and Computer Festival. Will County Fairgrounds, Peotone, IL I-57 Exit 327 East 6a.m. - 3 p.m. Air conditioned main exhibition hall opens 8 a.m. Lots of covered flea marked space, acres of free parking. Grand prize $500, 2nd Prize $300, $100 for 3rd Advance double-stub tickets $4.00, $5.00 at gate for more info e-mail Jim Riley KB9CYL at rileytrix@aol.com

August 10 (Saturday) - Western Illinois ARC Swapfest, Quincy, IL. Eagles Alps Grounds 3737 North 5 th Street. 4.5 miles north of downtown Quincy with easy access from US Highway 24. 8:00 a.m. to 2:00 p.m. Admission is $3.00 at the gate, $2.50 in advance, per person. ARRL VEC testing, all classes, is at 12:30 p.m. Reservations go to NA9Q at

(217)224-8526. Indoor flea market is $5.00 per 5-ft table. Outdoor tailgating space is free. Talk-in is on 147.03. Lunch will be served on the grounds.

August 18 (Sun) - DuPage ARC, Stickney, IL. DuPage ARC Ham-fest Computer Show. Hawthorne Race Course, 3500 S. Cicero Ave. Air conditioned exhibit hall for dealers. Outdoor fleamarket spaces free. 8AM - 2PM. 6 AM setup. Admission $5. Kids under 12 free. Talk in 145.25 MHz. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517. tel: 708-985-9256.

August 25 (Sun), Woodstock, IL - Tri-County Radio Group. McHenry County Fairgrounds, Rt. 47. Admission $5 at gate, free parking. Kids under 12 free. Info (voice/fax) (708)658-1678.

August 25 (Sun) - Vermilion County ARA, Danville, IL. Info: Gary Denison, KA9SKS, 14704 East 2750 North Rd., Danville, IL 61834-5610. tel: 217-759-7389.

August 28 - 30 - Antique Radio Club of Illinois, Elgin, IL. RadioFest96. Holiday Inn Holidome and Convention Center, 345 River Road, Elgin, IL 60123 Ph. (708)695-5000, (847)695-5000 After 01/20/96. Info: Jeff Aulik, 1708 Parkview Ave., Rockford, IL 61107 or Carolyn Knipfel, RR 3, 200 Langhorn, Morton, IL 61550.

SEPTEMBER

September 8 (Sun) - Bolingbrook ARS, Joliet, IL. Info: Ed Weinstein, WD9AYR, 7511 Walnut Ave., Woodridge, IL 60517, tel: 708-759-7005

September 13-15 (Fri, Sat, Sun) - Peoria, IL. ARRL National Convention. Info: Ron Morgan, KB9NW, PO Box 3508, Peoria, IL 61612-3508, tel: 309-694-2649

Sep 21 & 22 (Sat & Sun), Grayslake, IL - Chicago FM Club Radio Expo. Lake County Fairgrounds. Starts 6 AM. Build-ings open 8 AM. VEC testing. Info, (708)457-0966. Usually one of the best hamfests in NE IL.

Sep 29 (Sun) - Computer Central, College of DuPage (see notes at the end of this article).

NOTES - Computer Central shows

Computer Central computer shows are held at the College of DuPAGE, Main Arena of the Physical Education Building Park Blvd & College Road, Glen Ellyn, Il. 708-940-7547. $5 admission with card, normal admission $6.00. Opens 9:30 am - 3:00 pm.

>Do not like the jamming just change the channel or go for what I do
>turn the damn thing off.
>

I believe that we, as law abiding amateurs should aggresively
track down jammers and gather enough evidence to send to the FCC.
But as some have mentioned the FCC seems to have turned a deaf ear
to most amateur complaints. So do what the one of the radio groups
I belong to did - have a friendly attorney draft a letter to the
jammer telling him/her that he/she is no longer welcome on the repeater
and if activity continues a civil action will result. This method
was very succesful.

Well, I'm "portable" in KH6 land. I'll sell you a QSO for $25, throw in
the QSL card for free! My QSL cards are cheap Hawaiian post cards containing
a topless Polynesian beauty with my callsign scrawled above her head
with a felt tip pen. A welcome addition for any shack.

I had a problem like this on 2 meters when my wifes "ht" was pluged
into the cig lighter and the A/C was on. When she transmitted it
would sound like a Harley Davidson. I coiled the cable around a
ferrite rod and taped it up. No more noise. A few months later she
developed a loud whine on transmit. That time it was the alternator
going bad. New alternator no noise.

If you are talking about Robert Hall Electronics they are great. The prices are quite reasonable, they are fast and do good work.

I was told just yesterday that Robert has retired and moved but the shop is now run by his sister and is called Holly Electronc. They say the phone and address is the same. I have not verified this info.

>
> Rick Miller
>

But for the most part (and not all, so no flames) .. when I was in high school, and I went to a hamfest, and I saw a good looking woman, she was usually some geek's girlfriend, and not a ham herself. The ones that were hams were usually SHOOOWEEEE ... but like they say in statistics, there's always outlyers in there ...

Like engineering school .. every now and then, there's a nice looking one .. but she was usually a slut ! (grin)

Hello Ken. The American Radio Relay League has a WWW page at URL:

http://www.arrl.org/

There you will find "HOW TO GET STARTED IN AMATEUR RADIO" where to take
exams, books to study, Amateur Radio activities and much more.

Good Luck and hope to hear you on the air soon.

This is an interesting thread......

Things have changed drastically in the last 20 - 30 years. I remember that the best place to find good stuff was at the army or electronic surplus store. There were no fleamarkets or hamfests to speak of. You had to scrounge around for parts unless you were rich. I rememebr being delighted to get a pair of 6146 pulls in trade for a used 6L6. Every part was valuable. You or a buddy could fix just about any technical difficulty - the idea of sending it back to the factory was unknown except for the odd Collins snob who would do just that every year (at least so he said!) for alignment and inspection. Things were not so competitive as they are now. Many fewer contests. I knew all the ARRL DXCC countries. You hadda learn the Code whether you liked it or not. You sent to the FCC for your test.

Maybe that's why I like Boatanchors..........

There are many clubs in the Philly area. Among them are the Mid-Atlantic
ARC which meets out near K of P. The Phil-Mont Mobile ARC meets at the
Franklin Institute Science Museum, and supports the ham station there.
The Frankford Radio Club is a contest club, and supports the regional
packetcluster system. There are many others. A list from a few years
back listed more than 30 clubs. Some are special-purpose, some are
general-purpose, and many are repeater support groups. The Philadelphia
Area Repeater Association supports a large and varied system of repeaters
that provide both local area and regional coverage.

Steven,
If you are looking for a TOP QUALITY dual band radio, stay with Yaesu,
Icom or Kenwood. The Alinco falls in the same class as the Radio Shack
Ham equipment, re: not worth your time. They remind me of the old Ford
addage, "Fix Or Repair Daily". I have seen more Alinco and R/S
equipment spending more time being repaired than used.

6067. Best way to learn high-speed code?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-24 00:00:00 UTC
From: jbarr@MCS.COM
Message-ID: <4t5hsd$2tq@Mercury.mcs.com>
Source record: 220378
Cross-posted to: rec.radio.amateur,rec.radio.amateur.misc,rec.radio.amateur.policy

I have enjoyed being a Technician for several years, and am interested in upgrading. My problem is that I would like to "go all the way" as far as learning the code -- like learning the code at 20 to 25 wpm. I have heard that if you learn code at 5wpm, that getting past 13wpm is a real barrier. For higher speeds, you basically have to learn it over. Is this true?

I have also heard that a good way to learn high-speed code is to listen to high-speed tapes and pick out the letters you can pick out and do this over and over until you learn the code.

Basically, I want to learn the code, and I want to upgrade as high as I can go, but I really don't want to waste my time learning and re-learning at different speeds. If I actually learn the code at higher speeds, how will it affect my comprehension at lower speeds?

The Code has always been a sore spot with me, but I am really motivated, and want to learn it now. Any suggestions would be GREATLY appreciated!

Thanks!

Hi all
I just hooked up my new Icom IC-281h 2M mobile, and I have a few questions.

1) The manual leads me to believe that Tone Squelch is included in the US version. I can ENcode PL tones, but the rig won't DEcode them (I.E. I can't get ' T SQ ' to appear by following the directions).

2) Is there any way to monitor a priority memory channel while in MEMORY mode w/o transferring the freq. to the VFO each time I switch channels?

3) I know that these '9600 ready' synthesized mobile radios are not supposed to be too good at 9600, but I was curious if anyone had successfully used an IC-281 at 9600. If so, any comments/advice?

It would be helpful if responses could be emailed as well as posted if possible.

Thanks & 73
Dave N2VYP

All you need to do, is find a way for her to enjoy the hobby, as well.
My wife hated my radios untill I did two things.

First I got involved with Army MARS. She has been involved with the
VFW Auxiliary for YEARS, and when I started moving moral traffic from
overseas, she was willing to upgrade things a bit to help "the boys".

The second one suprised me. I took her on a storm chase and she LOVED
it! She heard other hams talking about sending TV pics bact to NWS,
and asked if I could do that. I said,"Yes, with the propper
equipment." Her reply was, "Well, I guess you'd better spend some
money." One mobile ATV station, just that simple! We still storm
chase whenever we get the chance!

She has no desire to get a ticket, but my hobby has "value" to her.

Nice try. There's only one Burt Fisher. Copy Cats like yourself and Jim Kehler should follow your own advice and get "their OWN opinion". Flame baiting with someone else's lines is unimaginative.

Dave,

The CTCSS decode does require an optional board (Model UT-85). It plugs
in and doesn't require any adjustment.

I am using mine for 9600 baud and have no complaints at all. The data
doesn't look as solid on a monitor as a crystal rig, but still seems to
work fine.

I haven't used the priority monitor so I wouldn't be much help with it.

Thanks for the suggestions, Gary. (BTW -- it's been a long time since
we spoke.)
Uh -- quick question -- how would I ground the gas tank? All I can
think of would be to drill a hole and put a bolt in -- obviously not a good
thing! ;-)
So what's the better way?
Also -- I'll be headed down to Radio Shack to try to find some caps & a
choke in the next few days. I really appreciate your COMPLETE description of
the filter. It's a lot more than anybody else had done.

Hi All,
The Clovis Amateur Radio Pioneers, an ARRL afilliated club in Central California has a member; 14yr old Derik Lockwood (KE6YSB) in Valley Childrens Hospital, Fresno, suffering from Cancer. Derik will soon be transfered to Stanford University Hospital, and would like to receive QSL cards from Amateur Radio Operators. If you could send your best wishes to Derik on a QSL card ,or any card, the membership of CARP would be eternally grateful. Please send them to;

CARP - KE6YSB
P.O. Box 514
Clovis, CA 93613-0514

... and we will forward them to Derik. Thankyou very much for your help!

Thanks for reading this article!.

I'm looking for information on the use of a Heathkit QF-1 Q-multiplier,
specially if it is suitable for working with a HW-101 transceiver.

I need also the manual / schematics for it.

Any information about this unit will be appreciated.

Best regards.

Please, e-mail to: EB5AGV@AMSAT.ORG

I agree ... government officials and attorneys have (should have) an
ethical obligation to the public (and their clients) to maintain their
actions and associations in a manner which precludes any
possible *appearance* of impropriety or conflict of interest.

While I'm not saying it necessarily applies to this instance, the old
adage *does* say "where there's smoke there's fire" ...

I prefer Shakespeare (I believe) ... "kill all the lawyers..."

The other one that comes to mind goes ... "Q: What do you call 10,000
laywers at the bottom of (pick a large body of water)? ... A: A start."

I actually have two sets of cards. One is the plain W4MPY card which I
send out to the DXpeditions and contest stations who receive probably
60,000 of them and often don't keep them.

The other is a specially-designed card. I went to all the trouble of
tracking down Hans Evers, PA0CX, to request permission to use one of his
cartoons from HAM RADIO magazine for my card (which he gladly permitted.)
I have received many positive comments on this card, so I know people
enjoy its uniqueness!

Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc

Hans Brakob wrote:

> Just to set the record straight: (with regards to HR 3207)

Since your setting the record straight, can I ask if your
posting this as the ARRL Dakota Division Vice Director
or just as yourself?

I think the best way to "set the record straight" is for
concerned amateurs to FULLY research this bill and the
associated laws and come to their own conclusion.

Some information on H.R. 3207 can be obtained at the following
web sites:

http://www.house.gov
http://thomas.loc.gov

Make sure to look up all the referenced laws as well.

You also can locate your congressman should you wish to
file comments with regards to H.R. 3207.

>From what we have seen others post, and in fact, even by
your own admission, problem OO's are being admitted into
the program (KiloCycle Cops I believe you called them).
While there *may* be some merit in HR 3207, it does not
deserve any consideration until safeguards are put into
place to cleanse the program of this vindictive element.

Should you have some serious concerns about this bill
you can contact Congressman Bill Baker at:

Hon. Bill Baker
10th Congressional District, California
Rm. 1724 Longworth House Office Building
Washington, DC 20515
(202) 225-1880
BBAKER@HR.HOUSE.GOV
http://www.house.gov/billbaker

Also, if you have any direct experince (good or bad) with
the present OO/Amateur Auxilary program, you should consider
filing testimony with the subcommittee on Telecommunications
& Finance, of which H.R. 3207 has been refered to. They can
be reached at:

The Subcommittee on Telecommuncations & Finance
Jack Fields, Chairman
2125 RHOB
Washington, DC 20515
(202) 225-2927
Commerce@hr.house.gov
http://www.house.gov/commerce/telecom.htm

Its important that amateurs not sit on there collective
behinds and let this legislation slide through unopposed.
Maybe we need something, but lets give it some thought and
make it truly serve amateur radio and not some special
interests. H.R. 3207 in its current form is flawed
and hopefully will be defeated.

Hans Brakob wrote:
>
> I have recently seen (and received) some messages which suggest

> deal for the amateur service. Just to set the record straight:
> --
> 1) OO's have no enforcement powers, and HR 3207 would not
> grant them any such powers.

Well, Title 47, sec. 154 (f)(4)(C)(iii)(II) (which outlines
the powers of the OO/AA's) states: "The functions of individuals
recruited and trained under this subparagraph shall be limited
to - (II) the conveyance to Commission personnel of information
which is essential to the ENFORCEMENT of this chapter relating
to the amateur radio service;". So, while OO's have no ability
to issue sanctions to violators, they provide information
with regards to enforcement of FCC regulations. In other
words, they have the 'ear' of the FCC. HR 3207 would not
grant them any additional enforcement powers, it just would
absolve them of any liability for there actions including
libel, slander, misrepresentation, deceit or interference
with contract rights (28 USC Sec. 2680).

> 2) They perform volunteer duties which would otherwise have
> to be performed by public employees paid by your taxes.
> (In other words, the public is getting something free.)

The VEC program you mean? I don't have a problem with that. But
if your refering to the OO program, what duties are they replacing?

I hate to tell you, but nothing in life is "free".
I'd really MUCH rather see federal employees doing law enforcement.
Instead of trying to promote pork like H.R. 3207 with regards to
the OO program, why don't we just lobby congress to get the
FCC the funds to do their job?

> 3) As volunteers, they risk frivolous and malicious lawsuits
> when performing these duties, and under current law would

> have to defend against such lawsuits out of their own
> pocket.

As human beings, we risk frivolous and malicious lawsuits. I'm
not sure I get your point. Most people act in a responsible
manner throughout there lives, and never see the inside of
a courtroom.

> Many very qualified people have decided not to
> volunteer their valuable services because of this risk.

Its up to the
sponsoring organization to provide liability insurence through
the private sector to their OO's/members. Doesn't the ARRL already
do this? If not, maybe they should consider it. Then again, the
Federal Tort Act is just a taxpayer financed insurance policy. Do
you have any specific data as to how many are not volunteering
because of this percieved risk? It was my understanding there are
currently over 700 OO's in the states.... as I understand it far
more field personnal then the FCC ever had.

> Others, who have volunteered without knowledge of this risk,
> may unwittingly have their savings and property in jeopardy
> of an unwarranted suit by a jerk with an "attitude".

Do you have any data on how many "unwarranted suits" have been
filed against OO's? Its my impression there have been very few,
and even fewer (none??) that the court found was a 'unwarranted
suit by a jerk with an "attitude"'.

> 4) HR 3207 would simply provide these volunteers with the same
> legal defense help they would have if they were paid public
> employees performing these duties.

Problem is, there appears to be no mechinism to rid the program
of the occasional vindictive OO. You even acknowledged this
problem in a earlier post (Kilocycle Kop was the term you used).
Federal employees in a similar role have a required educational
background (4 year degree and/or military background), and
extensive criminal checks are done on there background. There is
also accountability throughout the program.

> 5) If an OO screws up in a fashion that deserves action by a
> lawsuit, a lawsuit can still be filed.

Sure, a lawsuit can be filed. You file it with H.R. 3207 in place
against the OO and it will get kicked out of court. The proper
procedure, if HR 3207 passes, is as follows:

1. Contact the agency in charge of the OO (the FCC) (28 USC 2675).
2. Wait till they reject it, settle or 6 months, whatever is first.
3. Then sue the United States government.
Of course, they make their own rules. The net effect of this

legislation is to make it all but impossible to pursue a effective
action against a OO that may be out of line.

> 6) HR 3207 does NOT increase the powers of an OO in any fashion.

True. Just decreases their need to act in a responsible manner.

> --
> 73, de Hans, K0HB
> --

I realize most OO's are just concerned amateurs trying to
give back to there hobby. But almost everyone admits there
are 'problem' OO's in the program. Before we go giving the
OO program the protection and legal resources of the
federal government, lets clean our own ship up first, OK?

First of all, the spectrum auctions started out when the Democrats
were in control of Congress. If you want to blame someone,
start with them, since they set the precedent.

Secondly, the 2M and 70cm bands are NOT "at the top of the list."
They, as well as a number of other band segments, are
to be studied as candidates for the "Little Leos." Nothing more.
Anyone who states otherwise is either paranoid, ignorant, or both.

Gate 4 opens the vanity program up to ALL license classes.

>
> Any estimates on when this gate will open? I think Gate 2 just opened, so
> it is probably still a while off.

Once gates are opened, they will remain open. Barring problems at the FCC, the gates are expected to open 30-60 days apart if I remember right. Gate 1 opened May 31st, Gate 1A just opened July 22nd. No announcement has been made yet for Gate 2 but should be coming up shortly... I hope :-). I would think it will open by mid- to late-September based on the above schedule.

>
> I have been looking for Extra class callsigns that are neat and I want to >
> be
> ready when it opens. :) (Yes, this entails upgrading to extra.. whoopie)

Better HURRY... and GOOD LUCK with your upgrade! Gate 2 is for extra class, and those "neat callsigns" will not last for long!

In my vast experience, the words "hot-looking women" and "amateur radio"
are oxymorons, just like "jumbo shrimp", "military intelligence", and
"insurance opportunities".

>Maybe when she realizes that if she'd get with it she could reach me
>any time she wants...

Sounds like a good reason to buy a GMRS or Family Radio Service radio,
not an amateur radio.

Only if you consider a rabbit a farm animal.

> > hams do. Do you have a boyfriend or do you sleep with your HT ?

Yes I do have a boyfriend, as a matter of fact. Tom, N0YYW, and he's not a social decrepit like some hams are. And he's from my generation too--not a 40 year old ham fart who's wife got a clue and left him. We both sleep in the same bed, together, WITH our HTS. It's pretty kinky, Jim, you should try it some time.

> >
> > 73, Jim KH2D

Well, Jim, all I can really say is you and Burt have just proven that you are exactly the kind of people that drive young and/or female hams AWAY from the hobby.

At least my husband will never have to worry about me complaining when he want to go to a hamfest and buy equipment. I'll be right there by his side buying my own.

I can't argue with that. I'm third year CompE, and I'm usually one of two or three women in my classes.

It's too bad people like Burt and Jim are unomfortable about their masculinity and have to show it by verbally cutting down young women. I guess I was lucky, a majority of the hams in my hometown of Kansas City

were very welcoming of me and my friend N0ONO, who is also a female ham studying Veterinary Medicine here at MU.

There are two sides to this discussion. One that argues that when it comes to public safety, there is no such thing as too safe. The other is: consider that the current (1992) ANSI standard is 10-50 times below the levels of exposure that have been shown to cause a problem.

> Most of the concern at 2m appears to be due to the effects of RF

One could go on for pages talking about the possible effects. But be clear that heating is the generally accepted criteria, at all frequencies 3Khz - 300 Ghz, not only 2m.

> To avoid gross heating effects, you need to keep the power density
> at your person down to less than 10 mW/cm^2 (some suggest 1 mW/cm^2).

> held in front of your face when transmitting could be cause for concern
> since the antenna is at eye level, and very close. (A spkr/mic might be
> a good alternative.)

Yes a speaker/mic is a very good alternative!! And yes the eyes are very much a concern!!

However, in the near field of antennas, less than 1/2 meter from a 2m antenna, power density is NOT the major concern. Specific Absorption Rate (SAR) is what is important. Basically, that is how much power is truely absorbed by the body. The power levels involved here are MUCH below the point where molecules are being effected, thus it is called non-ionizing radiation. The body's absorption varies considerably as

frequency changes, thus available power density is not sufficient for a criteria in the near field.

> For mobile installations, where rig power may be in the 30-50 watt
> range, I'd be particularly careful about thru-the-glass type antennas
> for a couple of reasons. First, the coax generally radiates and makes
> the cabin RF "hot".

Yes, most thru the glass antennas do not decouple the coax well or at all. Thus there can be significant fields inside the passanger compartment. Try placing a piece of conductive tape from coax ground near the feed to vehicle chassis ground near by. I find that in many cases that actually improves antenna performance as well.

> And second, part of the antenna is near eye level
> outside the glass, and you get a good dose when transmitting (cowl and
> trunk lip mounted antennas share this problem). A roof mounted antenna
> is much safer (and much more effective too) because the metal roof shields
> you from its fields and you are below its main lobe.

The term "a good dose" implies a high dose, or high SAR. This is generally not true. At the base of the end fed thru the glass antenna there are high voltages, not high currents. Because of the high dielectric constant and fairly high conductivity of the human body, it is not high voltages that lead to high SAR. It is high currents that lead to high SAR. In the case of a thru the glass antenna, there may be high standing waves inside the passanger compartment, but they are not real power. They are merely high voltage standing waves that will rapidy disappear in the vicinity of the high dielectric/high conductivity of the human body. You have to worry about the high currents on the coax that may be running near your body much more than the high voltages caused by the antenna itself!

> While some exposure doesn't seem to have done most hams any lasting
> harm, this isn't a joking matter. If you expose yourself to the fields
> of a high power amateur VHF amplifier with its shielding removed, or stare
> into a high ERP array, you can be blinded in a matter of moments.

Blinded in momemts. I doubt that. Cataracts are considered the biggest health risk for the eyes. They take months to years to form. High exposures may accelarate their growth. If there is a risk of being blinded in moments, that is coming from SAR levels that are so high that one is damaging the eye with large temperature increases. (Hold a hot soldering iron in front of the eye and you can also damage the eye from temperature rise) These would have to be SAR levels far in excess of the ANSI standard. We are talking hundreds of watts of available power at a very close distance. If I fed 100 w into a 10dB gain yagi on 2m, in order to be inside the main lobe I would have to stand in front of the yagi. That would put me a matter of feet away from the driven element. That would be equivalent to standing several feet from a dipole driven by 1000 watts. At a distance of 4 feet from such a dipole, the available power density is already below the ANSI standard for the "uncontrolled

environment". Which is to say that if you stood there for up to 6 minutes out of every 30 minutes, you would still be below the ANSI standard. This is where the arms length rule is very handy to remember.

> Even a little HT's rubber ducky may have a cumulative effect.

The effect is always cumulative, no matter what kind of antenna or exposure level.

> While the effects of lower frequency RF fields are less well understood,
> I'd be cautious about placing antennas near people. In particular, I'd
> be careful about indoor or attic mounted antennas.

Attic mounted antennas are usually not a problem. Consider an attic mounted hf antenna fed with 100 watts. The very large size of the antenna helps to distribute the power over a large area, making the available power density low. In fact, an attic mounted hf antenna may have a considerably lower power density in the room below it than the 2m ht antenna has two inches away from it. Also, the absorption of the human body is much poorer at frequencies below 30Mhz, making the SAR thus lower. (The human body is resonant in the range of 50-75Mhz depending on several factors. At resonance is where absorption will peak.)

> Outside, high, and
> in the clear would be the watchwords I'd live by in order to reduce
> the field exposure you, or your family and neighbors, might have to
> endure. Fortunately, your antenna will work much better mounted this
> way too. (People who fight against tall towers don't understand that
> it is precisely the tower's height that protects them from exposure
> to high RF power densities, thanks to the inverse square law, and
> due to raising the main lobe of the antenna above the local
> neighborhood.)

Absolutely true! (Although I don't like that word "endure". How about "be exposed to") In fact, the power densities generated from almost any two way type system, when the antenna is on a tower tens of feet, or even hundreds of feet away from the ground is so low that the disucssion becomes mute. These people who argue against cellular towers on the basis of RF exposure have no clue how rediculious that is. The power densities are so low they become difficult to even measure! In all but the most very dense antenna sites, the exposure is below the ANSI limit at 10-20 feet away from the array of antennas even in line with the beam pattern. Below the beam pattern it is even lower.

> eyes). If we follow that advice, we probably won't have any problems

> related to RF exposure.

Wonderful statement. The risks involved with driving a car, or drinking water out of the tap at home far out weight the exposure a typical ham receives from his hobby. Use minimum power; when in doubt, stay arms length away from any unknown antenna; keep the ht antnna a couple of inches from your fact while transmitting; and enjoy the hobby! If you want to worry about something effecting your health, start worrying about the chemicals that you have as cleaners, or the chemicals in the cosmetics that you use every day.

ARRL News Release
Newington CT

July 24, 1996

For more information contact:

Bart J. Jahnke, KB9NM
ARRL/VEC Manager
Tel: 860-594-0300
(internet: vec@arrl.org)

Re: ARRL/VEC To Extend Service Hours for New License Information on Weeknights Until 9 PM -- New Evening Service Hours to Begin August 5, 1996

Beginning Monday, August 5th, the ARRL/VEC will begin providing a new weekday-evening license information service. The addition of an evening shift will allow even more new licensees and upgrading amateurs to receive their new license information and call signs by calling the ARRL/VEC.

These new evening hours bring the total daily hours such information will be available from the ARRL/VEC to 13 hours per day--weekdays (covering 8 am to 9 pm eastern time).

"With the Fall examination season just around the corner, this new weeknights' service will allow us to provide a more complete service to all our Amateur Radio licensing customers--especially those on the west coast and in the Pacific and Alaskan areas," says ARRL/VEC Manager Bart Jahnke, KB9NM.

For new license information, contact the ARRL/VEC by calling 860-594-0300 (weekdays and evenings, from 8 am to 9 pm eastern time). To allow adequate time for VE team, VEC and FCC processing of your new license application, please wait 7 to 10 days from your test date before calling.

Hi James, If I were you, I would learn the code at 20wpm character timing and 5wpm character spacing. That way, you hear each character just as it sounds at 20wpm but have time to learn it at a slower character speed. It's called Farnsworth timing and SuperMorse will do it.

I have heard a couple of 11 meter operators locally (using modified 10 meter equipment) who were practicing code to GET their Tech Plus licenses in the frequencies BETWEEN 11 meters and 10 meters (above 27.405 and below 28.000 Mhz) because they didn't own a practice oscillator! It was easier to use the radios illegally.

Go figure....

: having distinct rec.radio newsgroups if folks continuously misdirect

: their posts to the wrong group? The last thing we need is to see 100+
: Motorola sale items listed here daily.

Both you and Brian are correct, of course, Jeff. I just don't relish the re-hashing of this topic as it happened a few months ago; just hurts the S/N in this newsgroup, which really isn't that bad.

And, after all the arguing subsided, nothing was accomplished. People continued to post for sale/wanted messages here and in the other rec.radio.amateur.* newsgroups. This is not going to stop.

In the future, it would be best to send a polite note, as Brian did, but send it via e-mail, not to the newsgroup, if one *really* must play net.cop.

The newsgroup should have been named rec.radio.amateur.swap in the first place, with a charter broad enough to include anything that hams or or other radio enthusiasts would care to sell, swap or seek.

>think of would be to drill a hole and put a bolt in -- obviously not a good
>thing! ;-)
> So what's the better way?

Well, don't *solder* wires to it either. :-)

Actually, you *can* do that (a wide copper strap rather than a wire)
if you first fill the tank to the very top with water. (This is an
old welder's trick.) But there are two things that are a bit less drastic
that you can do. The first is to take advantage of the bolts holding
the sending unit and pump in the tank. Just loosen these bolts and
slip your bonding conductor under them. This is the most useful thing
you can do, because this is where the offending wire leading to the
pump exits the tank (and where you're going to install the filter).
The other thing you can do is use finger stock to make friction contact
with the perimeter of the tank and bond it to the body that way. (You
can make your own finger stock, or use heavy commercial stuff.)

. Can someone kindly

>>How to get started?

What is Ham Radio, and
How do I get started?

A short introduction
by Hans Brakob, K0HB

Here on HamNet we frequently see messages asking for more information about the hobby, and how to get started. This file is a VERY brief attempt to explain the hobby and give some pointers on where to get more information. Almost certainly I won't answer all your questions, so feel free to ask for help on the forum. Hams are famous for their eagerness to help newcomers.

(First I have to explain something you might not have realized. In doing so, I'm going to paraphrase something written by Steve Ford, WB8IMY, in his introduction to a book entitled "The ARRL Operating Manual". Steve, by the way is a regular here on Hamnet. He acts as the ARRL HQ representative.)

In case you didn't know, belief in magic is a necessary requirement for all Amateur Radio operators. Of course, you won't see a question concerning magic or metaphysics on the test you take to obtain your license, but in your heart you will come to believe in that powerful, intangible force.

All of us in the hobby have felt its influence at one time or another. Some night when the band is dead as a doornail you'll be tuning aimlessly, not expecting to hear a single signal because NOTHING could be coming through at that hour. But then, rising out of the noise like a ghost, there will be a faint call from another stalwart explorer thousands of miles distant. You pounce, establish contact and both of you marvel at the fact that the conversation is taking place at all. A few minutes later, however, the signal vanishes as quickly as it came. Your rational mind will shrug it off as a quirk of propagation, but that little tingle in your gut will tell you otherwise.

If you could travel back in time to, say, 1294 AD, you'd probably be burned at the nearest stake for even suggesting that two human beings could communicate with each other over great distances without a physical connection. No

doubt they would accuse you of dabbling in magic -- and they'd be right!

As Amateur Radio operators, we work feats of magic every day. Many of us have become jaded about our powers and we tend to dismiss them as commonplace. We hardly think twice when we use our equipment to sommon the elemental forces of the universe. But every so often we need to pause and remind ourselves of what we are really doing. We need to remember the essence of what drew us to our unusual avocation in the first place: the wonderful magic of wireless communications.

So how can YOU become a magician?

First, you need to prepare to obtain a Magicians License. The Federal Communications Commission calls them Amateur Radio Operator Licenses, and they come in 5 "classes".

There are two "entry class" licenses, namely the Novice and Technician class. These two classes of license are designed to give the newcomer access to a number of frequency bands without a too-strenuous examination.

The Novice class gives the widest range of frequencies, and will be attractive to folks with a desire to talk to "distant" places. The written test is the simplest of all the tests, and the examination also requires you to be able to copy Morse code at 5 words per minute. This license will also give you access to some "local" bands, but not as many as the Technician class.

The Technician class license, as the name implies, is aimed more at folks with a technical bent (you don't have to be an electrical engineer though). The written test is a bit more difficult, but you don't need to know Morse code for this license. The frequency bands for this license give you more "local" communications, although if you wish, you CAN take the Morse test, in which case you will also get access to the "worldwide" bands the same as the Novice class.

The next three classes of license are General, Advanced, and Extra. These three classes have access to portions of all amateur bands, with progressively more difficult exams, and requirements for copying faster Morse code (13, 13, and 20 words per minute respectively).

To prepare for the exams you will need some study material

. Can someone kindly

(Continued from previous message)

and more information about classes, examination points
(the exams are given by volunteer Hams in your community),
and clubs in your area. A number of organizations will be
more than willing to help. One such organization is the
American Radio Relay League. Write them at:

ARRL
225 Main Street
Newington, CT 06111

or call them at 1-800-32NEWHAM.

Ask for their "newcomers" package. It will include more
detailed information, a list of classes and clubs in your
area, and a list of scheduled examinations in your area
also.

If you are near a Radio Shack store, go there and ask for
a book entitled "Now You're Talking". This book is also
available from the ARRL. It contains all the information
you need, including study material and sample questions
for the examinations for Novice and Technician licenses.

Good luck, and welcome to the "magical" hobby.

Source record: 220494
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

Hello all,

I have recently purchased a Sangean 818-CS, and am quite happy with its construction/features/performance, but I have a question concerning the function of a slider switch on its left side. It's labled 'BEAT OUT' and the options are '1' or '2'. The manual makes absolutely no mention of its function, and I can discern absolutely *no* difference when it's in either position, on any band, or with BFO on or off.

My guess is that it selects between upper and lower SSB (as there is no other selector switch for this), but when listening to a SSB xmission and switching between 1 and 2, there is no difference. I'm wondering if the switch is then *broken*.

If you know what this switch does, please let me know by *personal email* as I am not a regular reader of this group. You might want to post your answer/guess to the group too, though :)

TIA,

Michael Olsen

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-24 00:00:00 UTC
From: faunt@netcom10.netcom.com
Message-ID: <FAUNT.96Jul24151539@netcom10.netcom.com>
Source record: 220500

I will make a short defence of Q signals on voice: They are short, easily understandable and a common set of phrases that everyone has learned (or at least has been exposed to). There is no other set of standard phrases that is internationally (or even nationally, in the case of the US) known.

If they are given phonetically, using standard phonetics, they are understandable, no matter the language or accent.

If there were a standard set of phrases that everyone knew, then Q signals would be unnecessary, but Q signals are the most standard at present.

6118. Re: Biological effects of nearby RF: Any Recent Studies?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-24 00:00:00 UTC
From: Paul Moller <Paul_Moller@csg.mot.com>
Message-ID: <31F622A1.21C2@csg.mot.com>
Source record: 220501

Richard,

There are several articles that speak to hams and biological effects.

One is: INCREASED MORTALITY IN AMATEUR RADIO OPERATORS DUE TO
LYMPHATIC AND HEMATOPOIETIC MALIGNANCIES.
Eng.
Milham, S., Jr.
Epidemiology Section, LP-15, Washington State Dept. of Social Health Services, Olympia, WA
98504
Am J Epidemiol 127(1):50-54
1988

another is: SILENT KEYS: LEUKAEMIA MORTALITY IN AMATEUR RADIO
OPERATORS (LETTER).
Eng.
Milham, S., Jr.
Epidemiology Sect., Div. of Health, Dept. of Social and Health Services, WA 98504
Lancet 2(8432):812
1985

General conclusion: For portable radios- keep the antenna at least a couple of inches away from your face while
transmitting. For mobiles- keep the low power (5-10w) mobile antenna at least 4 inches away from your body, and the high
power (50w+) antenna "arms length" away from your body. Email me direct if you have any more specific questions.

Yeah, all the electronically controlled wiz-bangs on today's cars
makes radio transmitter installation a real crap-shoot. I don't see the
gadgetry going away any time soon either.

I was really concerned about setting off the airbags when that
100 watt field hit the car! No electric door locks or anti-lock brakes
to worry about in our model, whew!

I think both the radio manufaturers and car makers need to be more sensitive
about these issues.

The radio makers need to make sure their external wiring is clean
of unwanted rf energy and susceptibility to it. The car makers
need to invest more in rf susceptibilty and unwanted emission supression.

Of course cars aren't the only vehicle to suffer from rfi - remember the
trouble the blackhawk helicopters had when they got to close
to radio broadcast towers?

I agree that this is not a proper use of the repeater auto patch. Its a business activity. It doesn't have to directly result in $ in your co's pocket. Maybe it's a subtle difference, but you have to make it. Nearly everything your company does if for the end business purpose of making $. Your presence or lack of presence or late presence can reasonably be expected to affect the company profit potential.

Go for the spirit of the requirement, not the letter and you'll probably be fine.

On what grounds? What legal footing would you possibly have to file a
civil action against someone for transmissions (legal or not) that they
make over PUBLICLLY OWNED, amateur radio frequencies.

While I'm not in any way defending the activities of a repeater jammer,
threatening to file frivilous litigation is not the answer.

Actually, the was a case a yar or two ago, where a california based repaeter club sued and won against a known
jammer. the fool actually went back on the air and is currently in jail.

I am sure some one out there in internet land has more details

just my way of contributing

Jim,

people vary. What works for one person may not work for another.

I'm a firm believe that the best way to improve your speed it to use cw, preferably a little faster than you can comfortably copy.

I know that my speed really went up when I operated the high level traffic nets and HAD to copy fast (and accurate). I ran into a barrier at 30 wpm, that's all the faster I could print. Last winter I finally started to learn to copy in my head. I'm envious of the ops who can carry on at 50-60 wpm (most of them seem to be old railroad or navy ops).

Of course, if you learned cw by way of listen to dots and dashes and then think what letter that is, then you're in big trouble. To me, the best way is to hear a sound and let your brain respond with the letter (and really fast ops hear whole words). I know there have been times when my mind wandered while I was copying and I had to look down at the paper to see what I had copied.

Hi there...

About five years ago I owned a Kenwood TS-930S/AT that output nearly 200 watts. I sold the rig, but recently got a new one. I don't know what the mod was, but do know that it was minor. Anybody have an idea on this one. Thanks a bunch!

> csulok@balu.sch.bme.hu
I find that my NiCd cells have an open-circuit terminal voltage of 1.3
to 1.35 or more volts per cell when fully charged (NiMH cells up to
1.4vpc). I check mine with a good digital voltmeter, and determine the
state of charge from this off-load voltage (wait for 15 to 30 minutes
after charge or discharge before doing this test). Opinions vary on
this, but it has always worked OK for me. The nominal '1.2v' per cell, I
find, usually means only around 10 per cent charge left, if that. 10.7v
over 8 cells (1.3375vpc) sounds OK for an end-of-charge voltage to me.

The charge _rate_ might be worth checking though; I don't know the
specification of the NC-60, but some (not all) NiCd chargers are rather
basic (often just a half-wave rectifier in series with the transformer
secondary, the winding's resistance being used to limit the current),
and not very accurate or constant in their current output. C/10 (i.e.
75mA for a 750mAH cell) is often quoted as the maximum advised rate for
continuous charging of NiCds, and many would say that even a charge at
that rate should be limited to the 14 to 16 hours needed for full charge
from complete discharge. I use a time switch to limit the charge time.

Also, do the cells get warm after a period on charge? - when this
happens, power is being dissipated as heat instead of being chemically
stored, and the cells are therefore likely to be fully-charged (the
internal resistance of NiCds is very low, so heating due to this should
be insignificant at the C/10 charge rate).

Good luck and 73,

I have enjoyed being a Technician for several years, and am interested in upgrading. My problem is that I would like to "go all the way" as far as learning the code -- like learning the code at 20 to 25 wpm. I have heard that if you learn code at 5wpm, that getting past 13wpm is a real barrier. For higher speeds, you basically have to learn it over. Is this true?

I have also heard that a good way to learn high-speed code is to listen to high-speed tapes and pick out the letters you can pick out and do this over and over until you learn the code.

Basically, I want to learn the code, and I want to upgrade as high as I can go, but I really don't want to waste my time learning and re-learning at different speeds. If I actually learn the code at higher speeds, how will it affect my comprehension at lower speeds?

The Code has always been a sore spot with me, but I am really motivated, and want to learn it now. Any suggestions would be GREATLY appreciated!

Thanks!

I found back in '37 when got first ticket, best way to learn code at all was to read every sign post you see, newspaper, magazine, traffic signs, etc every day read them in your mind in "di dahs". If you do it often enuff you can reach not only 25 but up to 45wpm as I did later on as a commercial RO for the airlines and CAA. I guess if your not making your bread with cw however even an upgrade to 30wpm would be worthwhile.

Not if you learn code correctly in the begging. If you learn code by the "sound" of each character you can go all the way to 20 wpm=
+. 30 to 35 wpm is not unheard of. The problem is that many people learn code by counting "dits & das". You can learn code this =
way "BUT" the human brain can only count dits & das up to 10 wpm. I have heard this is the reason for the 13 wpm on the general te=
st. So......if you have learned code by counting dits & das then yes you will have to relearn the code to go past the 10 wpm wall.

I do have a 736 with CW filters, however I installed them myself.
If I remember correctly, you set the presence of the CW filters
in the start up screen - see the manual on enabling the startup
screen. If the filters are enabled but no filter is installed
then you get no signal. If the filters are not enabled then
the filter slots are bypassed whether or not filters are present
and you get unfiltered signal.

Ken:

Try looking at the ARRL (American Radio Relay League) web page
at http://www.arrl.org

It will provide you with information about how you can get test
information, and they sell study materials.

If you don't have web access, they have a 800 number that you
can call (I don't know it, offhand, but the AT&T 800 operator will
be able to tell you.) They're based in Newington, CT.

And don't let the constant flaming in this group turn you off.
We're really much nicer on the air. :-)

ARC-5 ? Yup, I even have one in new condition sitting on my parts shelf.

Got my first ticket in the earily 60's (WA4AME). My first rig was a Heathkit Twoer (looked like a lunckbox). I had a Halo on the back of my Dad's car and used a mobil power supply to use the Twoer while we went on trips.

Let my license expire in the earily 70's then got back into it in the late 80's (KB4BJO). Just got my old call back under the vanity callsign program.

I loved all the old stuff. I too ground my own crystals and built my own receivers and antenna's.

I still have ton's of old parts (germanium diodes and rectifiers (remember the ones with all the plates), coils, rotary inductors, coil winding machines, etc).

I'm all for an oldtimers news group.

Anyways, it was nice remembering......

In case your total experience is just some memorized some test questions, SOME
radios have channels (sometimes called 'modes' and various other things...)

My vhf syntor_x has channels, 32 in fact.

Don't know about the Saturn. A friend and I did $1200 damage to a
Toyota by keying a handheld in the car during a test drive. The
salesman had given us permission thank goodness. The car just quit!

Run 50 watts VHF and UHF in a Thunderbird without trouble.

73,
Joe

6151. W1AW-list has moved to arrl.org

Newsgroup: rec.radio.amateur.misc

From: n1ist@netcom.com
Message-ID: <n1istDv2v6I.CFt@netcom.com>
Source record: 220399

Subject: W1AW-list has moved

Since there appears to be no hope that Netcom will ever improve its
mailing list services, w1aw-list has been moved to a server down at
ARRL headquarters.

If you want to continue to receive the W1AW bulletins, please resubscribe
to that list as follows: (note that the procedure is different from Netcom's)

****

SEND A MESSAGE TO w1aw-list-request@arrl.org WITH THE SUBJECT (NOT THE
BODY)

subscribe user@host.com

WHERE user@host.com IS YOUR E-MAIL ADDRESS

****

There is no need to unsubscribe from the Netcom list; I'll take care of
that myself.

Thanks again for your support and patience with my w1aw-list over the
years. Note that this change will not affect any of the other ham-radio
related lists at Netcom.

W1AW-list is now maintained by Jeff Bauer, w1aw@arrl.org, and the League
list server by Jon Bloom, jbloom@arrl.org

Hi all,

I am very much interested in home entertainment and the use of it. I would hereby like to ask people to tell about some things about satellite broadcasting, digital radio, and Pro Logic.. What is the current state of technology? Who is offering what? Which companies have the best products, what are the trends nowadays and what do you think will happen in the future with the technology? Is it already available in the US and elsewhere in the world? And if so, how etc? I'm a student and I'm doing some research on this technology...

Cheers, Bas.

A few years ago, I would have agreed with you. Today, I think the previous posters are right. There are a lot more women getting into amateur radio, and a considerable number of them seem to be quite attractive. I've noted the same thing recently at gun shows and on the ranges. I bumped into Louise Mandrell at a shooting match not long ago. If she doesn't qualify as a "hot-looking woman", I don't know who does (and boy can she shoot).

The word is getting out, you don't have to be an unwashed geek to be an amateur radio operator anymore (and a grandmother is president of the NRA). Women are moving in on us, boys. And it ain't a bad thing!

Thanks to all for responding to my querry!

Following are the answers received in the last day, many of which were
emailed and not posted to the group.

Your feedback is great!

Thanks again,

Michael Olsen

The answers:

It's a beat-frequency switch. Without going into detail, it's
basically used on the AM BC bands if you start hearing signals
hetrodyning together. One of the alternate positions may reduce
the irritating noises. :-)

- Rich
***

Does this receiver include an audio cassette recorder?

I had an AM/FM portable that used a switch to change the frequency of the
cassette recorder's bias oscillator. Bias is a high frequency signal that
is added to the record head current to make the tape's response more linear.
If you are recording and listening to AM the bias oscillator can generate
frequencies that can make the AM radio squeal. This switch gives you a
slightly different frequency to move the squeal away from the desired signal.
If you are listening to FM you can use either setting.

Patrick A. Thompson
transmitter supervisor WBIR-TV
amateur radio WA4TUK
***

I think this is included on the "CS" version because of the cassette
recorder feature. All tape recorders have bias oscillators that
opperate at about 40 - 100 kHz. These oscillators produce harmonics of
their fundamental frequency that can cause a "beat" on the station
that you are recording. This switch lets you choose between two
different bias frequencies to avoid interference when recording. The
bias frequency doesn't have to be precise to achieve its purpose of
reducing tape hiss and improving frequency response of the recording.

All the best,

Al
***

The switch is "BEAT CUT", not "BEAT OUT". It's used on the a-m band
to eliminate the "whistle" of heterodynes from competing stations on
the same frequency. Might also have some effect when listening to
SW stations. It will have no effect when the BFO is on. There is
nothing wrong with your receiver.

I've got that radio also. the "beat-cut" switch
doesn't do much on mine (as far as I can tell)
either. I know my manual makes reference to it. I'll look it up
this weekend. Also I have a mod that eliminates the muted
sound during tuning , making the radio sound like an analog tuner.
Makes searching for weak stations faster. I'll look for that also.
I'll let you know what I find.

>Epidemiology Sect., Div. of Health, Dept. of Social and Health Services, WA 98504
>Lancet 2(8432):812
>1985

Milham's work has been challenged as statistically flawed. It's worth reading, but do keep in mind that it isn't fully accepted as addressing *RF* dangers. There was no control done for the chemical exposures amateurs routinely face, nor was there any correlation with amateur occupations or other environmental factors which may have contributed to the slightly increased incidences of these cancers in the surveyed population (for example, amateurs who live sedentary lifestyles may make up a larger subset of the amateur population than of the general population). There wasn't even any measurement or estimation of exposures to RF fields done for the silent keys in these studies. Milham just checked cause of death on medical records for recently deceased amateurs.

Milham's work *suggests* that there may be a link between amateur radio and these cancers, but it doesn't prove that the link is *RF exposure*. Note, I'm not saying there *isn't* a link, but these studies don't prove a link. There is some better work available which tries to address these confounding factors, but the question remains very much open.

This is a separate issue from direct RF heating exposures. That's on very sound scientific ground. No one can seriously question the effect of RF heating on tissue (especially if you've ever used a microwave oven).

6156. Experiences with Koch Method?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-25 00:00:00 UTC
From: dfinley@newshost.aoc.nrao.edu
Message-ID: <4t83hj$h0j@orion.aoc.nrao.edu>
Source record: 220404

Any Experiences With the Koch Method of Morse Training?

It's been about a year since my article on learning Morse code by
the Koch method went up on the Web at:

http://hawk.nmt.edu/bateman/sara/finley.morse.html

With an eye toward future revisions, I'd like to hear of experiences
in using this method. If you, or someone you know, used the Koch
method, let me know how it went. Did it work for you? What were
the rough spots? Did any modifications seem to help?

If the Koch method worked for you, had you tried other methods before?
How long did it take you to reach your goal?

To save bandwidth, it probably would be best to send me email rather
than post to the group.

Thanks,

Dave Finley, N1IRZ

Yes it for control purposes on the 2 meter machine. It is perfectly
legal to conduct remote control of a 2 meter repeater through an
autopatch - it's called remote control by wireline. In other words - we
control the repeater by telephone.

6164. Alpha Bravo phonetics: the quickie version

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-25 00:00:00 UTC
From: Brian.Kelk@cl.cam.ac.uk
Message-ID: <4t8df4$kr2@lyra.csx.cam.ac.uk>
Source record: 220412
Cross-posted to: alt.usage.english,sci.lang,rec.radio.amateur.misc,rec.radio.info

Phonetic Alphabets (Alpha Bravo etc)
(brief version)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets, spelling alphabets and telephone alphabets.

I have a collection of alphabets for many languages which
I post occasionally, but as that now amounts to many hundreds
of lines I here post a brief sample.

Following discussions last year the full collection is not
now posted to alt.usage.english.

Brian Kelk bck1@cl.cam.ac.uk
25 July 1996

That famous alphabet:

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

(It is approved by various official bodies but note the
variant spellings Alfa Juliett Juliette Oskar Viktor.
It dates from about 1955 and is used in air traffic control,
amateur radio and many other circumstances.
One of its titles is the NATO Phonetic Alphabet.)

An earlier alphabet (used by U.S. Navy up to 1954):

Able Baker Charlie Dog Easy Fox George How Item Jig King
Love Mike Nan Oboe Peter Queen Roger Sugar Tare Uncle Victor
William X-ray Yoke Zebra

A French alphabet:

Anatole Berthe Ce'lestin De'sire' Euge`ne Franc,ois Gaston
Henri Irma Joseph Kle'ber Louis Marcel Nicolas Oscar Pierre
Quintal Raoul Suzanne The're`se Ursule Victor William Xavier
Yvonne Zoe'

A German alphabet:

Anton Berta Caesar Dora Emil Friedrich Gustav Heinrich Ida
Julius Kaufmann Ludwig Martha Nordpol Otto Paula Quelle
Richard Siegfried Theodor Ulrich Viktor Wilhelm Xanthippe

Ypsilon Zacharias

A"rger O"konom Schule U"bel

Two Spanish alphabets:

Antonio Barcelona Carmen Chocolate Dolores Enrique Francia
Gerona Historia Ine's Jose' Kilo Lorenzo Llobregat Madrid
Navarra N~on~o Oviedo Pari's Querido Ramo'n Sa'bado
Tarragona Ulises Valencia Washington Xiquena Yegua Zaragoza

Amalia Beatriz Carmen Domingo Enrique Federico Guatemala
Honduras Ida Jose' Kilo Lima Llave Me'xico Nicaragua N~on~o
Olimpo Pablo Quito Rafael Santiago Teresa Uruguay Venezuela
Washington Xilo'fono Yucata'n Zorro

An Italian alphabet:

Ancona Bologna Como Domodossola Empoli Firenze Genova Hotel
Imola Jersey Kilo Livorno Milano Napoli Otranto Palermo
Quaderno Roma Savona Torino Udine Venezia Washington ics
York Zurigo

For more details and more alphabets see the full list, which
is posted at intervals to sci.lang, rec.radio.amateur.misc
and rec.radio.info; it is now also crossposted to various
*.answers groups. On the World Wide Web you can find copies
of the postings and some further material at:

<http://www.cl.cam.ac.uk/users/bck1/menu.html>

The main posting is also available at:

That have been shown to cause an *immediate* problem. The jury is
still very much out on longer term effects, just as it is on field
effects. RF heating isn't the cause of Milham's statistics on
excess cancers (dubious as I think they are for other reasons).

>> Most of the concern at 2m appears to be due to the effects of RF

That's true, but the heating effect is more pronounced at VHF+
because of the way the body interacts with the EM field.

>> To avoid gross heating effects, you need to keep the power density
>> at your person down to less than 10 mW/cm^2 (some suggest 1 mW/cm^2).

>criteria in the near field.

Power density is still the concern, but as you note, the way the body
reacts to the fields varies with frequency. The eyes are particularly
vulnerable, in particular the lens of the eye, because there are no
blood vessels in the lens, and thus heat is not as rapidly carried
away from the lens as it is from tissues with extensive networks of
blood vessels. (IE most of the body is water cooled.) The lens of the
eye is a protein very much like the white of an egg. I'm sure everyone
has noted how the fluid and clear white turns opaque, and loses its
flexibility when heated. This can happen to the lens of the eye too.
If heated, it opaques and/or loses the flexibility required for variable
focal distance. The result is either blindness or fixed focal distance
vision, or a combination of both. This can happen rapidly all at once
if exposed to a very high power density, or slowly and cummulatively
if exposed to a lower power density for a long time.

>that may be running near your body much more than the high voltages
>caused by the antenna itself!

Okay, this is the area I most wanted to address. A high current node
on an antenna corresponds to a strong magnetic field, and a high
voltage node on an antenna corresponds to a high electric field.
In the far field of the antenna, the two combine to form the EM
wave. Energy is handed back and forth between the magnetic and
electric fields as the wave propagates. *Energy is conserved*
in this process, so that the wave has the same energy whether
it is momentarily stored in the electric field or the magnetic
field. Power is also constant (at a given distance) because it
is the product of E*I. When E is high, I is low and vice versa,
but the product is a constant.

It is misleading to say that because we are exposed to a high
electric field it will render a lower exposure than if we were
exposed to a high magnetic field intensity. They are just the
left and right hands of the same thing in regard to energy and
power density. The body does react differently to magnetic and
electric fields. The body isn't ferromagnetic (despite the non-
negligible iron in our blood), and offers little "purchase" for
the magnetic field to "bite". The body is mostly a wet resistor,
and responds most to the electric field. (This is gross over-
simplification, many biological molecules are dipolar and do
have a response to the magnetic field too.) The main idea,
however, is that you are *not* safe to assume you aren't getting
a harmful exposure just because you're looking at a high voltage
node on the antenna. The energy in that field is just as real
as the energy in the magnetic field.

The idea that the standing wave on the coax has no substance is
also flawed. Just like the standing wave on the antenna, it *is*
what generates radiation fields. The voltage standing wave is
accompanied (at a 90 degree separation in space) by a current
standing wave, so even if you want to discount the E-field,
you can't ignore the H-field generated on the coax.

>> While some exposure doesn't seem to have done most hams any lasting

>exposures may accelarate their growth. If there is a risk of being
>blinded in moments, that is coming from SAR levels that are so high that
>one is damaging the eye with large temperature increases.

Exactly. We are limiting ourselves only to thermal effects here. We'll avoid the potential field's effects because that is still controversial. If you don't think an amateur legal limit VHF+ amp can blind in moments, put an egg in a 650 watt microwave for moments and then examine the white. It will have opaqued and become rigid. The only reason we don't see this happening frequently with amateurs is that we usually avoid peering into the plate compartment of an unshielded legal limit VHF amplifier while it is on. However, we can get the same power density from a high ERP antenna system. For example, a horn antenna on an amateur microwave setup, or even staring down the bore of a high gain VHF yagi, can deliver a similar power density.

>(Hold a hot
>soldering iron in front of the eye and you can also damage the eye from
>temperature rise) These would have to be SAR levels far in excess of the
>ANSI standard. We are talking hundreds of watts of available power at a
>very close distance. If I fed 100 w into a 10dB gain yagi on 2m, in
>order to be inside the main lobe I would have to stand in front of the
>yagi. That would put me a matter of feet away from the driven element.

Yes, exactly. Don't do that. It can blind in moments.

>That would be equivalent to standing several feet from a dipole driven
>by 1000 watts. At a distance of 4 feet from such a dipole, the available
>power density is already below the ANSI standard for the "uncontrolled
>environment". Which is to say that if you stood there for up to 6
>minutes out of every 30 minutes, you would still be below the ANSI
>standard. This is where the arms length rule is very handy to remember.

Distance is your friend. It is especially your friend with an isotropic source. With a tightly beamed antenna, more distance is required if you're in the main lobe of course. My rough calculation shows you're still staring into a power density of about 100 mW/cm^2 in the above situation. Remember, the yagi isn't an isotropic source, and you can't apply that model to the field strength in the main lobe and then just add antenna gain over isotropic. That'll work in the *far* field, but not in the *near* field (less than 10 wavelengths from the antenna).

>> Even a little HT's rubber ducky may have a cumulative effect.
>
>The effect is always cumulative, no matter what kind of antenna or
>exposure level.

Perhaps not. I would expect a threshold below which effects would not be detectable. For example, when you are ill, you may run a fever of 102-104 F before danger of tissue damage becomes acute. I'd expect that exposure to power densities which don't raise lens temperature above that normally encountered on a hot day

in Phoenix shouldn't have a cummulative effect. If it did, we
should find that residents of Phoenix are more prone to cataracts
and fixed focus than residents of Fairbanks. I don't think that's
the case.

>> While the effects of lower frequency RF fields are less well understood,
>> I'd be cautious about placing antennas near people. In particular, I'd
>> be careful about indoor or attic mounted antennas.
>
>Attic mounted antennas are usually not a problem. Consider an attic
>mounted hf antenna fed with 100 watts. The very large size of the
>antenna helps to distribute the power over a large area, making the
>available power density low. In fact, an attic mounted hf antenna may
>have a considerably lower power density in the room below it than the 2m

>human body is much poorer at frequencies below 30Mhz, making the SAR
>thus lower. (The human body is resonant in the range of 50-75Mhz
>depending on several factors. At resonance is where absorption will
>peak.)

In this case, I'm speaking of the somewhat more speculative field
effects of EM waves. Though it is generally true that amateurs
run more power to HF antennas than they do to VHF antennas, so
the larger wavelength may be somewhat offset by the higher power
levels, and don't forget you're in the near field and can't just
apply the inverse square rule as if you were dealing with an
isotropic source. Anyway, there is evidence in vitro of cell
division effects by relatively low level field potentials. That
has not yet been demonstrated in vivo, but it is strongly suggestive.

>> Outside, high, and
>> in the clear would be the watchwords I'd live by in order to reduce
>> the field exposure you, or your family and neighbors, might have to

>the most very dense antenna sites, the exposure is below the ANSI limit
>at 10-20 feet away from the array of antennas even in line with the beam
>pattern. Below the beam pattern it is even lower.

I agree with you about the ignorant folk who fear towers. However, I
think "endure" is the proper word. These fields don't exist in nature
to the extent we're discussing here. We have to generate them. They are
an effect we haven't naturally evolved to tolerate. It may be that such
field exposures are actually beneficial, but I'd give long odds that
they aren't. At best I'd expect them to be neutral in effect, but they're
more likely to cause some upset to some biological function.

>> We all take risks every day, and amateur radio isn't particularly
>> risky compared to crossing the street or driving a car, but there

>want to worry about something effecting your health, start worrying
>about the chemicals that you have as cleaners, or the chemicals in the
>cosmetics that you use every day.

Yeah, but a bit of appropriate caution with regard to RF field
exposures isn't unwarranted. I don't think arm's length is a rule
you can universally apply. You really need to sit down and calculate,
or better, actually measure, the power density at various distances
and stay well below the ANSI limit for the frequency you are using.
For example, I'm not going to put my eyes within even 30 feet of
the transmitting antenna of the TV station where I work. And I'm
not going to go out and eyeball the aiming of my Oscar array while
the transmitter is on, even if I stay an arm's length from it.

Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels Pl _AND_ DPL, Keypad programmable, dual VFO, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (Can't find this in the manual, I think it;s a hidden trick.) Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $350/BO. Must sell ASAP, make an offer.

Steve, the FCC in its announcement of lifting certain restrictions on
Part 97 third party msgs (which made Pizza calls legal on patches), did
cite the term "pecuniary interest".....read up on that and then think
about your statements...

IF you have potential profit from any 3rd party traffic you handled to or
from YOUR employer (or loss of profit), its illegal..

No you cannot call the office and leave or check on business msgs...
ITS possible you could call the office and get a msg from the wife
telling you to pick up a gallon of milk...but then if you are going be
late to work, use the cell phone or call the office from a payphone...

Chris
WB5ITT

(not to say I have been tempted to use a patch in such a case....but

There are two thing that apply here. I'll break them down for you:

1) A repeater trustee has the right to ban anyone he/she chooses from
their repeater. See 97.205e

2) It's not the frequency stupid, it's the gear. Everytime you use a
repeater you're a guest of the repeater trustee.

>While I'm not in any way defending the activities of a repeater jammer,

Yes I do
Radio was fun and so were the people that you talked to.
The repairing of radio or other electronics equiptment and not having 200 to 450 volts jumping out and licking your hand as your eyes roll back. The fun of the hunt to find drawings and info on a radio. Talking on 80 meters with 75 to 300 watts and the quality sound of AM. You fixed everything.Now you get a high tek piece of crap out of a box. Looks good lasts a year or so then a newer one comes out and it starts again. Hell if it go bad just buy a new one there cheep .People do not keep things long, whats new is in and that seems to be the reason that we are so screwed up. The thought of having a radio that is 20 years old, are you out of your mind. Hell just buy a new one and keep yourself in debt.The radio gear may have been big, heavy and old. But it did last years and was a lot more fun. For the most part Quality and pride, whats that. Like I say "Maybe thats why we are so screwed up"

David,
Have you read Part 97 concerning this? The term "pecuniary interest" is what is in effect here...
You get PAID by your employer, therefore its illegal to call your "employer" (that includes anyone also paid by your employer) and discuss anything you get profit from (or less profit!)...

No, you cant call work and tell them you'll be there late!

Well, its a week or so after I posted a question and the lack of
any answer makes me wonder if the fellow should get sued.

I ask my question again ...

Is there any rock solid evidence that the SBE and ARRL are opposed
to any particular issue? By "rock solid" I mean something like a
comment on a rulemaking from the SBE that would be contrary to an
ARRL position on the issue. Or maybe a SBE article that expounds
a position that is obviously anti-amateur radio.

Is the SBE for taking away 40 meters from the amateurs? Perhaps they
want two meters?

Anyone??? Something I can get a copy of ... a magazine article ...
something??? KG7FU???

I think that you have answered your own question. "Not getting fired" constitutes a pecuniary interest. If one does not get fired, then presumably one continues to get paid.

We actually had this problem with one of our fairly new members a year or so back, and called him up short on it. Of course, I think that the only reason that he joined the club was to get use of the autopatch. He rarely talks to any other ham on the air, only his buddy who was licensed at the same time as he was, both exchanging mis-information about ham radio, but both with a real "I know it all" attitude.

Dang ... I started doing that too, every sign, license plate, name,
stuff I heard on the broadcast band. I just converted them to "di dahs"
and hit 40 before long. Never thought others did that! (I drive for
eight hours a day so I had lots of time and signs to convert.)

...because a Syntor X is a COMMERCIAL radio that must be
preprogrammed or has channel elements or crystals, NOT because there
is a coherent standard that assigns common channel numbers to specific
amateur frequencies within a band.

The radios have "channels", but the amateur bands do not.

Sorry, Ron, from what I know it can't be done. Rumor is that their new
2m mobile (HTX-242 I think) will allow this.

>driving 1968 VW buses again.....

I must be lucky... But my FT-5200 has not given me ANY trouble in my
last two American cars. A 1990 Thunderbird SC and a 1992 Escort GT. We
have several 100+ watt 450 MHz radios in Chevy and Ford pickups that have
no trouble at all. I have heard horror stories about Explorers - and I
am getting ready to move that 5200 into my '95 Explorer, we'll see.

I have heard about and seen trouble in both foreign and domestic cars
that I would attribute to "questionable installations". I never seen a
radio kill an engine but I have seen them mess with cruise controls,
windsheild wipers, and ABS controllers.

I have never seen any radio installation where "interference" damaged
anything permanently. "I keyed up with 50 watts and 'fried' my ECM" - I

have heard people talk about that kind of stuff but I have NEVER seen RF do that. I have seen people put drill bits through computers, people tie grounds to incorrect places that causes trouble, and cheesey antenna installs.

My mobile has always been installed with...

1. Power tied direct to the car's battery with a fuse (of course) and nothing smaller than #12 wire.

2. The radio's chassis ground is strapped to the car's body, not some bracket under the dash. I should note that the 5200 has always been remote mounted in the trunk where I can easily get a "body" ground point.

3. The ground is also run to the battery (or to the big ground connection adjacent to the battery). Be sure that you FUSE any ground going to the battery.

4. NO MAG MOUNTS. The sheet metal on every personal or company car I drive gets "violated" with my 3/4 hole saw and gets an NMO mount on the roof. You want the ground side of your coax on the car's chassis at the antenna and mag mounts don't do that. Don't worry about the value of your car crashing because you've drilled a hole in it (unless you drive some exotic machine like a Farrari, a Viper, etc.). One proper antenna mount will not hurt the value of your car. My cars are leased - and they still get drilled. Antenna farms will make your car look like the victim of a drive by shooting when it's time to sell - but one hole is no problem. Just put an NMO cap on it.

This is more than $.02 but I feel generous today ;)

Curtis

This switch changes the cassette recorder's bias oscillator frequency slightly
so that it doesn't interfere with AM stations you are recording. It should
have no effect on FM reception and the squeal the bias oscillator can produce
on AM stations should decrease with an increase in receive frequency.

It's a beat-frequency switch. Without going into detail, it's
basically used on the AM BC bands if you start hearing signals
hetrodyning together. One of the alternate positions may reduce
the irritating noises. :-)

The August 1996 issue of "Boys' Life", page 9, has a short item about the October 19-20, 1996 Jamboree-on-the-Air, sponsored by the World Organization of the Scout Movement.

It is a chance to introduce Scouts to Amateur radio and to have a chance to talk with other scouts around the world. I expect there is a patch for participants.

As they say in the article, "For more information, call your local council, or write to Jamboree-on-the-Air, International Division, S221, 1325 West Walnut Hill Lane, P.O.Box 152079, Irving, TX 75015-2079. Or call (214) 580-2405."

September 1994 QST covered mobile problems like this. They even had all
the address to write for help for all the major automobile companies.

>73
>N0EVG

I don't believe that's a well founded opinion. I've owned, or repaired
for others, most of the equipment on the market. My experience with
Alinco has been very positive. So positive in fact that I currently
own and use two of them in my trucks (a 570 and a 590). In my experience,
there are only two brands of VHF+ equipment that I'd avoid like the plague.
Topping that list by a wide margin is Kenwood, a distant second is Azden.
Everybody else makes pretty reliable radios with fairly decent performance.
(Now understand that everybody produces a lemon from time to time, but only
those two manufacturers seem to be able to do it consistently, model after
model, year after year.)

There also seems a remarkable amount of Radio Shack bashing on this group,
and for the HTX-202, I believe it is mostly unwarranted. I'd place that
radio much closer to Icom than to Kenwood in quality. (And that shouldn't
be surprising considering that the IC-02AT was the model which the HTX-202
designers were most closely emulating.) Some of RS's other radios more
closely resemble CBs in quality (though that's still a step above Kenwood),
but the HTX-202 is a darn rugged and reliable HT with the *best* IMD
resistance of any HT currently on the amateur market.

That's great. I'm glad to hear you have a boyfriend. More 19 year olds
should have real people for friends instead of HT's.

>a 40 year old ham fart who's wife got a clue and left him.

Who's wife left ? I did just did a wife check, and mine's still
here........ And I talked to my girlfriend on the phone today, so
she's still here too....... And don't forget, Fluffy, you keep hanging
around with Tom and in 20 years you'll have your very own
'40 year old ham fart'.

>We both sleep
>in the same bed, together, WITH our HTS. It's pretty kinky, Jim, you
>should try it some time.

Thanks anyway, Fluffy, but I don't think I'd be interested in sleeping
in the same bed with you and Tom and 2 HT's......

>Well, Jim, all I can really say is you and Burt have just proven that
>you are exactly the kind of people that drive young and/or female hams
>AWAY from the hobby.

You're still here aren't you ? So who got 'driven away' ?

>At least my husband will never have to worry about me complaining when he
>want to go to a hamfest and buy equipment. I'll be right there by his
>side buying my own.

And he'll never get too far from the barn either cuz you'll be calling
him on 2 meters every 15 minutes to make sure he's not up to anything
nasty..... The old VHF leash trick. You can fool some of these guys,
Fluffy, but you can't fool me.

6210. FT-50R PTT Stopped working, anyone else's???

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-26 00:00:00 UTC
From: Doug MIles <ko6tx@discover.net>
Message-ID: <31F9819E.34E6@discover.net>
Source record: 220258

Has anyone experienced the ptt on there ft-50r acting up?
I was chatting on a repeater when all of a sudden I could
not key up the rig? I noticed the battery warning indicator
was on so I thought okay wont key because the battery went
dead. So I replaced with a fresh battery and still could
not key up the radio. I could feel the the ptt switch
clicking but was not keying. So I played with it some
more and found that putting pressure on top of the ptt
button would key the radio (very hard pressure). Well after
a while of my resumed QSO I found the everything was working
fine again?

I have had the radio for about a week and preformed the
mars/cap mod and had to adjust the deviation for both
the vhf & uhf bands. (FYI:my radio stock out of the box had
1khz of deviation on both bands)

I think I will return the radio to HRO becuase if it is
acting up in the first week it is sure to happen again.

Hi John,

I haven't heard of any "special" arrangements being made for Shannon to
QSL her contacts. Dave, N6JLH, was handling voice and packet QSL's for
American contacts with R0MIR. I don't have his email address handy, but
you could try dropping him a note to his callbook address and ask him
about getting the QSL.

Mike,

Sorry, no, I did not recognize the sarcasm. One thing that I learned many years ago is that veiled sarcasm does not transmit well over the written word. I guess that you need to hit me over the head with a two-by-four to get my attention first :-)

COLS COLUMN

RONALDS TELEGRAPH (CONTINUED)

TO DEMONSTRATE THE UTILITY OF HIS TELEGRAPH OVER A
CONSIDERABLE DISTANCE, RONALDS BUILT TWO LARGE WOODEN FRAMES,
TWENTY YARDS APART AND WOUND AN IRON WIRE IN ZIG-ZAG FASHION
TO AND FRO BETWEEN THEM. HE WAS ABLE TO USE EIGHT MILES OF
LINE. BEFORE USING THE CLOCKWORK INDICATING DEVICES RONALDS
SATISFIED HIMSELF THE DISCHARGE OF THE LINE WOULD BE
INSTANTANEOUS. WE KNOW NOW THAT ELECTRIC CURRENT TRAVELS AT
300,000 KILOMETRES A SECOND, IT WAS NOT KNOWN AT THAT TIME.

WITH HIS LONG LINE HE WAS ABLE TO OBSERVE THE BEHAVIOUR OF
BOTH PITH BALL ELECTROMETERS AT THE SAME TIME AND ASSURED
HIMSELF THAT THEY BOTH COLLAPSED AT THE SAME INSTANT. HE FIRED
TWO PISTOLS ONE AT EACH END OF THE LINE BY THE DISCHARGE OF A
"LEYDEN JAR" (AN EARLY CAPACITOR) AND WITH HIS EYES CLOSED
COULD NOT DISTINGUISH MORE THAN ONE EXPLOSION. HE ALSO
CONSTRUCTED A SUCCESSFUL UNDERGROUND LINE IN WHICH THE WIRE
WAS LED THROUGH GLASS TUBES LAID IN A WOODEN TROUGH.

RONALDS SUCCESS WAS CONFINED TO THE TECHNICAL PART OF HIS WORK. IN JULY 1816 HE BROUGHT HIS WORK TO THE ATTENTION OF THE BRITISH GOVERNMENT SENDING A LETTER DESCRIBING HIS APPARATUS AND REQUESTING AN INTERVIEW WITH LORD MELVILLE FIRST LORD OF THE ADMIRALTY. RONALD WAS TOLD IN A BRIEF LETTER FROM SIR JOHN BARROW THE SECRETARY OF THE ADMIRALTY THAT 'TELEGRAPHS OF ANY KIND ARE NOW WHOLLY UNNECESSARY'. (NAPOLEON HAD BEEN DEFEATED BY THE DUKE OF WELLINGTON AND THE ALLIES IN 1815). RONALDS WAS DISCOURAGED FROM ANY FURTHER WORK ON THE TELEGRAPH.

HIS INTEREST IN SCIENTIFIC AND TELEGRAPHIC MATTERS WAS NOT ABATED HOWEVER AND HE CONTINUED TO CONTRIBUTE TO JOURNALS AND THE CATALOGUE OF THE 'RONALDS COLLECTION' REFERS TO CORRESPONDENCE BETWEEN HIMSELF AND W. F. COOKE CONCERNING THE TELEGRAPH WHEN LARGELY OWING TO COOKES LABOURS AND BUSINESS ACUMEN, THE TELEGRAPH BECAME COMMERCIALLY SUCCESSFUL.

ONE LAST NOTE, IT IS WORTH MENTIONING THAT RALPH WEDGEWOOD, OF THE FAMOUS POTTERY FAMILY, WORKED UPON A TELEGRAPH WHICH HE SUBMITTED TO THE ADMIRALTY IN 1814 ONLY TO BE REPULSED IN ALMOST THE SAME WORDS AS THOSE ADDRESSED BY BARROW TO RONALDS. AS NO ADEQUATE DESCRIPTION OF HIS APPARATUS SURVIVES HE CANNOT BE REGARDED AS HAVING CONTRIBUTED TO THE SUBJECT.

THE 'RONALDS COLLECTION' IS A LIBRARY OF BOOKS ON ELECTRICITY AND MAGNETISM WITH A CATALOGUE COMPILED BY RONALDS AND EDITED BY FROST THE FIRST LIBRARIAN OF THE INSTITUTION OF ELECTRICAL ENGINEERS (UK). THE COLLECTION IS NOW IN THE POSSESION OF THE INSTITUTION.

COLS COLUMN NR2

THE CALL-IN'S AND CALL-BACK'S ON 40 METRES HAVE BEEN VERY GOOD THIS LAST THREE WEEKS. LAST WEEK FOR INSTANCE THE PROPAGATION FAVOURED THE NORTH COAST AND THE WEEK BEFORE THE SOUTH COAST AND VICTORIA. MOST REPORTS HAVE BEEN IN THE 599 MARK WITH A FEW 579 AND 589.
DURING THE TIME PERIOD MENTIONED THERE HAVE BEEN 14 SEPARATE CALLSIGNS LOGGED, OF COURSE SOME OF THEM ALL THREE WEEKS. THIS IS A BIG IMPROVEMENT ON 40 METRES WHICH HAS GONE THROUGH A TERRIBLE PERIOD. I WOULD LIKE TO THANK ALL THE STATIONS CALLING EITHER BEFORE OR AFTER, HERE IS A LIST OF ALL THE STATIONS CONCERNED. VK2'S AIC, GQC, BQS, BAT. VK3'S ELW, EIB, BVJ, RY, AMN, JW. VK4TT. VK5AJV. VK7KDM. ZL1AOD.

LETS HOPE THE TREND CONTINUE, THOUGH IT IS TOO EARLY TO HOPE THAT PROPAGATION IS IMPROVING. I'M KEEPING MY FINGERS CROSSED FOR THIS WEEK, WHO KNOWS WE MAY EVEN REACH VK6 HI HI. 73S FOR NOW DE COL VK2CTD.

Notes of Interest:
ALAND IS., OH0 - A group of Finnish hams including OH2KI, OH1VR, OH0RJ, OH3MT, OH3MEP, and perhaps OH2/K8MN will be active 1-4 August on RTTY/CW/SSB. Callsign to be announced. QSL VIA OH1VR.

GUANTANAMO BAY, KG4 - KQ4GC will operate as KG4GC between 12-18 July. on RTTY/SSB. QSL via home CBA.

MIDWAY IS., KH4 - Look for activity on RTTY/CW/SSB by an international team in early August.

ROTUMA, 3D2 - 3D2AG/P will be QRV on RTTY/CW for one month during August on 80-10 meters.

The VK2SG RTTY DX NOTES are also available on the Internet at reflectors dx@ve7tcp.ampr.org and digital-dx@st.rim.or.jp . See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html .

For next week's bulletin send your bandpass and notes of interest to Luciano, I5FLN at ZS5S.ZQAF.AF .

THE OHIO/PENN DX PACKETCLUSTER
DX BULLETIN NO. 262
JULY 15, 1996

THANKS TO THE NORTHERN OHIO AMATEUR RADIO SOCIETY, NORTHERN OHIO DX ASSOCIATION, OHIO/PENN PACKETCLUSTER NETWORK, N2AU ? INSIDE DX, K4CEF, KQ4GC, KR4UJ, N4UCK, WB4RMJ, WA5YKO, KD8JN,

W9JOO ? ISLAND HOPPER, K0HB, W4/YV5DTA, DL6ET, G4BUE ? DX NEWS SHEET, G4BWP, HA1AG, JH1HRJ, PS7AB AND SV1CIB AND FOR THE FOLLOWING DX INFORMATION.

4M, LOS MONJES ISLAND (VENEZUELA). STEVE, W4/YV5TDA, REPORTS HE WILL BE GOING HOME FOR THE CQ WW RTTY CONTEST THIS UPCOMING SEPTEMBER. HE WILL OPERATE AS SINGLE OP/SINGLE BAND (20 METERS) FROM SA-016 AND USE THE CALLSIGN 4M1I. HIS DAD, LUIGI, YV5ENI, WILL ACCOMPANY HIM TO THE ISLAND AND WILL TAKE CARE OF ALL IOTA LOVERS ON SSB. STEVE WILL DO CW BEFORE THE CONTEST AND MAYBE SOME SATELLITE. IF THE TRANSPORTATION TO LOS MONJES FAILS, STEVE WILL GO TO LA TORTUGA (SA-044) AND USE THE 4M5I CALLSIGN. QSL VIA I2CBM.

OLYMPIC STATION W4O. JIM, N4UCK, REPORTS THAT THE 1X1 CALLSIGN W4O HAS BEEN ISSUED AS THE OFFICIAL OLYMPIC COMMEMORATIVE STATION OPERATING IN ATLANTA. JIM IS THE TRUSTEE/HOLDER OF THE CALLSIGN AND IT WILL BE IN USE THROUGH THE OLYMPICS INTO AUGUST. PLEASE DIRECT QSL PER THE INSTRUCTIONS OF THE OPERATOR ON DUTY AT TIME OF CONTACT. INQUIRES CAN BE DIRECTED TO N4UCK.

SV1, CYTHERA ISLAND (GREECE). ANDREAS/SV1BKN, DIMITRIS/SV1CIB AND VASILIS/ SV1DPJ WILL BE ACTIVE FROM THIS GREEK ISLAND (IOTA EU-113) FROM JULY 20-25TH. THIS ISLAND IS LOCATED IN THE PELOPONNISOS SOUTH GROUP. ACTIVITY WILL BE ON ALL BANDS (160-10 METERS) SSB/CW. QSL VIA THE BUREAU OR DIRECT TO: SV1BKN - ANDREAS VLAHOS, DIMOKRATIAS 28, VOULA 16673, ATHENS, GREECE OR SV1DPJ AND SV1CIB - DIMITRIS LIANOS, P.O. BOX 127, ARGINION 30100, GREECE.

UPCOMING IOTA CONTEST (JULY 27-28TH) ACTIVITY.....
NA-076 - PAUL, KR4UJ, AND STEVEN, KR4DL, WILL ACTIVATE CEDAR KEY AS A MULTI/SINGLE ENTRY. THEY WILL ATTEMPT TO ACTIVATE ALL BANDS JUST BEFORE AND DURING THE CONTEST IN MIXED-MODE.

NA-085 - MEMBERS OF THE CLAY COUNTY DX ASSOCIATION WILL BE ACTIVE AS AE4SJ FROM (FL007S) ST. GEORGE ISLAND, FLORIDA, JULY 26-28TH. PLEASE QSL WITH SASE TO GARY YOUNG, 3331 WILDERNESS CIRCLE, MIDDLEBURG, FL 32068.

NA-112 - BILL, WB4RMJ, AND JOHN, WB4NFS, THE O'MARA BROTHERS WILL BE ACTIVE FROM BOGUE BANKS (EMERAL ISLE), NC, JULY 21-28TH. OPERATION WILL INCLUDE 40, 30, 20, 17 AND 6 METERS (50.125

FM-14) SSB AND CW. DURING THE IOTA CONTEST, THEY WILL BE SIGNING W4IY/NA-112 ON SSB AND CW.

SA-029 - LOOK FOR ZX1A ON CW AND ZY1A ON SSB TO BE ACTIVE FROM GRANDE ISLAND LOCATED IN THE RIO DE JANEIRO STATE WEST GROUP. QSL VIA PY1SL.

YJ, VANUATU. RON, ZL1AMO, WHO WAS RECENTLY ACTIVE FROM THE FIJI SIGNING 3D2RW, HAS MOVED ON TO YJ-LAND AND IS NOW SIGNING YJ0ARW. HIS UNANNOUNCED ACTIVITY HAS HIM ACTIVE ON THE USUAL 20 AND 40 METER CW FREQUENCIES. ALSO, IT SUGGESTED TO WATCH FOR HIM ON THE WARC BANDS AND THE RTTY FREQUENCIES. HIS LENGTH OF STAY OR NEXT STOP IS UNKNOWN AT THIS TIME. QSL VIA ZL1AMO.

COMING EVENTS

AUGUST 17TH-18TH SARTG WW RTTY

SEPTEMBER 28TH-29TH CQ/DJ WW DIGITAL

OCTOBER 19TH-20TH JARTS WW RTTY

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or fax to (02) 672-3392, or by packet to VK2JPA at VK2WI.

Does anyone now how to modify Radio Shacks 2m mobile radio (HTX-212) so that you can store non-amateur radio frequencies in memory?

Thanks in advance.
N0SVC (Ron)

While I am also a strong advocate of the "drill the hole" school,
I do want to note that magmounts can offer an effective RF ground
connection. A DC connection is not required to suppress radiated
interference, but an RF connection is. The magmount supplies that
connection capacitively. There isn't sufficient capacitance at
HF, but there is at UHF, and there usually is at VHF.

I have a lot of diodes which look like 1N4148's.
The only marking are 2 green rings.
What is this diode ?
What is this marking code ?

Looking for a specific part, manual, rig, tube, antenna, etc? This
sunday, 7/28/96, on the Ham Radio & More Show, we'll let listeners
call in, toll free, and list their wants, their hard to find items,
that they've spent months, years, looking for. Who knows, you may just
have what they want in your "junk pile"! So listen and call in if you
have tried to find that elusive item. 1-800-293-5366. Also, fax your
wants anytime, which will be read, time permitting, at 602-241-1540.
Info on the show is below.

I hope if you banned him from the repeater you at least gave him his
dues back! As far as I see it, as long as his calls are legal and he
isn't interfering(sp) with any other members of the repeater, what
differance does it make who he talks to on the air. At least he made a
contribution to help upkeep on the machine. It is more than MANY hams
do that use a repeater daily!

Radio Depot in Bremerton, WA was recently burglarized.

Forwarded message:

The Kitsap Co sheriff Dective Division is the
investigating authority at 360-876-7101

As you have heard by now Radio Dave was burglarized Saturday nite The thieves
gained entry by forcing the front door. His insurance status is uncertain at
this time. This event could put him out of business.

Here is a list of the stolen equipment from Radio Depot, Bremerton.

Please distribute it to your friends, local radio stores, and publish it in
your club newsletters, etc.
We plan on giving this national distribution but need your help in doing so.

As you can tell the loss is substantial.

Thanks, Dick

I love it! That has happened to our repeater many times and you have to have a sense of humor. The call probably broke half the rules in the book, but at least it was handled as fast as possible.

We had a guy a few years ago call his wife to inform her that he was leaving the office and does she want him to stop at the store on the way home. She responded, "Are we going to have sex tonight? If so you have to stop at the drug store and pick up my little pills for me!" The guy was so mortified that all he could do was key up and say, "Uhhhhhhhh.....Uhhhhhhhh.......can we talk about it later?" The wife got insistant and said, "Come on, honey, we haven't made love in almost two weeks! Can't we have sex tonight?" Then he responded, "You know, I'm on the autopatch right now......." She cut him short and said, "Oh!.......Oh!.............OHHHHHHH! Well maybe another night! Bye!", and hung up. The guy was so embarrassed and received so much teasing from other club members that he dropped out of sight for about a month. Even now, three or four years later, when he gets on the air, somebody eventually breaks in and asks him if he is going to have sex tonight!

If anybody else has any funny blooper-type autopatch calls that they are willing to share, please do. I would like to hear them!

73 de WA3RVT, Steve

6225. Trade MicroVAX for Ham Gear

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-26 00:00:00 UTC
From: bwiencek@kcnet.com
Message-ID: <4tb9vs$d0q@guitar.sound.net>
Source record: 220273

Hello I am looking to trad a Digital Equipmetn Microvax II for Ham gear -

I am looking for HF transcievers (prefer digital/solid state - but will consider all) or a 10M mobile rig. Also any other interesting swaps - or of course $$ (cash)

Here's the latest set of specs I am sending people about the MV II
(will guarantee against DOA, and YES the unit can be shipped UPS in 2 boxes.)

Microvax II CPU KA-630
BA-23 cabinet (DeskSide - Pedistal style)
5M RAM MS-630-aa & BB
4-port Serial Card DZQ11-M
1-Tk-50 tape drive (95 MB)
1-RD-54 drive installed, (159 Mb)
1 spare RD-54 (159 MB)
1 RD-53 (71 MB)

VAX/VMS V 5.5-2
VAX 'C'
VAX BASIC
CMU TCP/IP services for VAX/VMS

a couple of tk-50 tape cartriges for backups

Also I have a VT-320 & 3 spare Keyboards that can be included if needed.

Hi Grover,

In Gate 2, you can request ANY callsign that is available... provided
that you are an extra class license holder. If you prefer a 1x3 instead
of a 1x2, you can get it.

:>
:> 73, doug

OK Doug, that's your opinion. I would much prefer to hear people speak English. "Can you copy me?" is much clearer than "QNJ?" And I would prefer to have a foreign ham say, "Thanks for the chat." instead of "Thanks for the QSO." (Even less syllables in that example.) Foreign accents do not trouble me that badly, but maybe I just try to pay more attention to the conversation.

There *IS* a standard set of phrases... its called LANGUAGE! And it is the basis of communication.

The Q-signals are of benefit to CW, and understandably other digital modes also, to save the operator on sending/typing time. They are neither "needed" nor "beneficial" to voice operations.

But that is MY opinion...

SuperMorse 410 doesn't seem to be compatible with Windows 95.
You can run it in DOS mode by restarting the computer and as soon as you see the message "starting Win95" press F8. Then choose DOS Prompt from the menu. Change to the directory that has Supemorse and type SM.
That should run it. If you want to start Win95, you type "win".

> Another note: Just tell the person you're selling the car to that the
> NMO cap is a place for a cell antenna.

Remember the thread? Everything but the hood on a Saturn is plastic.
That includes the roof, hi hi. (I have secured a large piece of stainless
to mount under the plastic roof to act as a groundplane. However, the
trunk mount on the hood is working as good as my three 1/4 waves on
the trade in. Being a firm believer in boring the 3/4" hole on the day
you bring the car home, the situation where a no-hole is working _great_
shows that my original belief that a hole-mounted antenna is best
has been shattered by observable proof. Hmmmm.)

>
>There are two thing that apply here. I'll break them down for you:
>
>1) A repeater trustee has the right to ban anyone he/she chooses from
>their repeater. See 97.205e

Yes, there's no question about this. A repeater control operator need not provide common carrier functions, and may take steps to prevent his repeater from repeating the signals of any station he desires. It is *his* station, he is not required to let anyone else use it. Remember, the repeater *voluntarily* repeats what it hears. It is not required to do so. It is the control operator's sole responsibility to see that it repeats only what he desires it to repeat.

>2) It's not the frequency stupid, it's the gear. Everytime you use a
>repeater you're a guest of the repeater trustee.

And there's no question about this either. A repeater control operator can turn off his machine any time he chooses to prevent you from using it (he has complete control, *you don't*). The frequency, however, does not belong to him, according to 97.101(b) "No frequency will be assigned for the exclusive use of any station". And that's the rub. He can't ban you from using a frequency simply because he has a receiver tuned to it (or a transmitter standing by to transmit on it).

You can stop someone from trespassing on your private property, but you can't stop them from using the public street in front of your property simply because *you* choose to suck anyone using that street onto your property and spit them out onto another street.

Now jamming is another matter. That's specifically forbidden by 97.101(d). "No amateur operator shall willfully or maliciously interfere with or cause interference to any radio communication

or signal." If they're deliberately jamming your signals, you can get relief.

Note, however, that to fit this definition, there must be an emitter on the frequency the jammer is using which is suffering interference. It is not the repeater which is being interfered with (its receiver is emitting no intentional signal on the frequency), it is some other user's signal that is being interfered with. If no one else is transmitting on the frequency at the time, it isn't jamming for anyone to transmit there.

Only in the case where the other station is also a repeater station does a special case arise where 97.205(c) kicks in and the coordinated repeater has priority.

Now civil suits aren't based on Part 97. They can have any contrived basis a crooked lawyer (oxymoron?) can conceive and convince a judge to swallow. No criminal action needs to have occurred to get a civil ruling. All it takes is deep pockets. So basically, threat of civil suit is a bullying tactic, and bullies often get their way.

>
>How could your business possibly benefit from you being late?? ;-) ;-)
>
>David N5OFQ

Your "business" is remaining employed so that you keep getting a
pay check. If your employer demands that you notify him if you're
going to be late, and you use amateur radio, you've advanced your
personal pecuniary interest, and that's a violation of Part 97.113(3).

It is Ok to advance the pecuniary interest of an unrelated business,
such as when you call a pizza parlor to order a pizza, but the rules
don't let you use amateur radio to advance your *own* pecuniary interest,
and calling in late, or sick, or to pick up messages, or to dispatch
a company truck, etc, etc are examples where you advance your own
pecuniary interest in remaining employed by doing business communications
via amateur radio.

A local amateur who is self-employed calls his wife about every
30 minutes during the day via patch. They always appear to talk
about household and family matters, but it is really a code that
they have to pass business information. They are engaged in at
least a double violation. Not only are they advancing their business
interests, but they are also illegally using a code to obscure
meaning. They've been getting away with it for years, right
under the FCC's nose (within a stone's throw of the Powder Springs
monitoring station). With that post now abandoned, they have even
less to worry about. But it is still a violation. They know it,
and those of us who've listened to it for years know it too.

That sort of willfull abuse is one reason there's no patch
on my repeater. The other reason is that we aren't supposed
to regularly use amateur radio in lieu of other available
radio services directly intended to provide that sort of
communications. Since cellular service is pervasively available
in most areas served by phone patch equipped repeaters, most
non-emergency uses of phone patches appear to now violate
97.113(5).

SB QST @ ARL $ARLB049
ARLB049 VEC filing news

ZCZC AG29
QST de W1AW
ARRL Bulletin 49 ARLB049
From ARRL Headquarters
Newington CT July 26, 1996
To all radio amateurs

SB QST ARL ARLB049
ARLB049 VEC filing news

The FCC said July 16 that it will permit VECs to file Amateur Radio Service license renewal and modification applications electronically on behalf of individual applicants. ''This will provide for more efficient application processing for Amateur Service license grants,'' the FCC said. As one of the country's 16 VECs, the ARRL will announce a start-up date to accept applications ''once it has established its policies and procedures to administer this program,'' said ARRL VEC Manager Bart Jahnke, KB9NM. Participating VECs may charge a fee for the service. The FCC said that at the request of several Amateur Radio operators, it was waiving its rules that require a Form 610 hard-copy application.

Most VECs, including the ARRL VEC, already electronically file all applications received from VE testing, a process the FCC said ''has been highly successful in eliminating delays in obtaining licenses.'' The Commission said VECs will not be required to accept applications from individuals for electronic filing, and the FCC will continue to accept hard-copy license renewal and modification applications without a processing charge. But the FCC said it anticipates developing the capability to allow individual hams ''to file their applications electronically and receive a license grant immediately.''

Once the program kicks into gear, individual applicants--working through cooperating VECs--will be able to file applications for license renewal and modification electronically. Acceptable modifications will include change of name, change of mailing address, and change of call sign.

Consistent with existing procedures, when application data are forwarded electronically, the VEC must retain the actual FCC Form 610 documents for at least 15 months and make them available to the

FCC upon request.

The FCC said that all other applicable rules pertaining to requirements for filing of applications are unaffected by the waiver, which can be terminated at any time.

Ted

We didn't ban him from the repeater. When I say that we called him up short, I mean that we spoke to him privately, on land-line, informing him that this is not a legal use of amateur radio. I still stand by that statement, that calling one's employer to inform the employer of one's tardiness constitutes pecuniary interest to the employee, i.e., the ham/caller.

After speaking to this person, that practice did stop. Had it not, we probably would have considered alternative actions.

73 de Jim

This reminds me of the old Palos Verdes AM 2m rptr - can't recall it's
callsign. By letting the phone at the rptr site ring 10 times the
rptr would shut off via a stepping relay. Every evening at 2300
(the owner's bedtime) he'd make the call and the rptr would go off
until the next morning at what ever time he woke up - then he'd dial
it back up again.

Fun early 70s ham technology. Not being state-of-the-art *today* is
nothing new.

What it all means is that the technician must be certified by an organization representing his/her peers in the private land mobile services and fixed services. One such organization is NARTE (National Association of Radio and Telecommunications Engineers) from which I hold a 1st Class Engineering Cerification (NCE). Note that this is different then PE's (Professional Engineer's) which are state certified. However, both certification's have requirements that must be met inorder to use the title. In other words, the person has been recognized by some organization as being qualified.

Does this make any Sense????

NO, but it sounds like you ran into a real FLAKE. There are
people like that who talk a good tune. No principles. Caveat Emptor,
especially in service busineses.

> Anyone who states otherwise is either paranoid, ignorant, or both.

Well said. Rather than crying around and talking nonsense it would be
much more efficient to:
- reasonably insist on the use for our frequencies
- showing to the public, that we are worth the privilege to use these
frequencies (yes, it is a privilege, not a right)
- proving, that these Leos don't need to be in these low frequencies (the
promotors won't do that anyway)

I don't vote for doing nothing, this would certainly be the wrong way,
but spreading lies (> > 2 meters and 70cm are at the top of the
list.....) does only show the lack of arguments (or the will to argue
reasonably) of certain people.

And Tony Pelliccio add his $0.02 worth with:

> Gee that's funny - my vfo lets me step through the frequencies without
> using channel numbers.

VHF and UHF operation has for the most part (since gaining in popularity) been "channelized". Now maybe your radio doesn't read channel 1, 2, 3 etc. And even though the knob is labled VFO, it is stepping in 5, 10, 12.5, 15 or 25 KHz steps. Guess what. It's channelized. Not completely variable with an "infinite" number of channels as the way HF radios have been traditionally.

Of course, if you had to buy crystals back in the 70's and pencil in the frequencies on the front panel, then things like 146.94 would be channel 1 (or A) etc.

The whole concept of channelization is to have pre-agreed upon frequencies. Even packet radio operation on HF is channelized. It makes easier for groups of people to communicate. It certainly isn't anything to be ashamed of. The military loved channelized radios. (Where do you think all those FT-245 crystal holders came from?) And of course, even Collins (thought by some to be the "One True Radio") had a crystal socket for channelizing net operating frequencies.

The only reason to have the VFO read out directly when it is stepping through the "channels", is that it is really a lot easier to just read it directly than to have to figure out a coding method to account for the 800 some odd possible channels on 2 meters for example.

But of course, trying to explain any of this to people that just want to find fault with others or blame everything on no-coders is like casting pearls

before swine.

Hi there. Re: the RS's mobile 2 meter rig. I recently purchased one. I live about 50 miles from our wide-area coverage 146.76 repeater, and I was happy that now I would be able to work it mobile, and it seemed perfect (it even fit in the slot in my minivan's dashboard. Unfortunatly, I was having a wee bit of trouble hearing the 146.76 repeater. It seems that an S-1 signal was being received on that frequency which beat rather strongly with the repeater, especially when the repeater's signal became weaker during in-town driving. I thought it was the minivan's computer, so I did some work under the dash. Needless to say, it didn't help. So, while I was scratching my head (and sitting in my hot minivan), I had the coax disconnected, and noticed that the strange signal was still present. I took the rig inside and put it on my bench, powered it up, and lo and behold, there was the signal! S-1 is a NASTY size of birdie (especially on 146.76), so I took the radio back to the local dealer. We tried another similar RS rig, and lo and behold, it TOO had the birdie! The dealer sent my original radio back to their service center, where (after two weeks) they looked at it and (supposedly) re-aligned it, saying that they could not find anything wrong with it! When it got back, it still had the big birdie. Needless to say, I got my money back. I guess I am stuck with using my ICOM HT and amplifier until I can find a good dual-band rig which doesn't have big birdies on well-known frequencies. No more Radio Shack for me!

The fuel pump is a big source of noise in Ford Explorers.
To cure it i ran a short wide ground strap from the pump ground to
the chassis, and ran pump wiring through a toroid.

Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $350/BO. Must sell ASAP, make an offer. Either reply via e-mail, or call 415-939-1037 anytime. Thanks

Evan

>If you are looking for a TOP QUALITY dual band radio, stay with Yaesu,
>Icom or Kenwood. The Alinco falls in the same class as the Radio Shack

Really?

Our (wife's a ham too) TOP QUALITY Yeasu FT2400 (you know, the one advertised as military-spec tough) developed an intermittent audio problem after something like 10 hours of use. This problem occured whenever the radio was used on mid or high power, rendering the transmitted signal unintelligible. Oh yah, it's also blown its front panel lights already. My inlaws (also hams) have a 2400, same problems. Two ham friends have Yaesus, similar problems. NEVER again. They look real nice inside and out, just don't expect them to actually function. Our piece of crap had a pretty easy life, and was only mounted in a car for about one year. We use it as the home station 2m rig now... don't really want to have to depend on it as a mobile unit, as the really scary part of its (and the inlaw's rig) problem is that it is going away by itself...

On the other hand, my Alinco DR570 dual-band mobile has performed flawlessly from day one, taken considerable abuse, and is still in great shape. The mic is indeed a plastic piece of crap, but I'm not too concerned about mics. My wife has a RatShack HTX202 that has also given great service since day one, despite being beat to the point of cracking the case. We'd buy from either manufacturer again.

>-Drew in Sunny Central Florida-
> KF4DDM

Actually, this happened on a wide area 2m machine here in So. Cal. and the courts ruled in favor of the repeater club, issuing a permanent restraining order against a past control operator who became a problem on the machine. It was sad to see things go that way.

In most cases, tracking and identifying the offender, then letting them know they have been caught worked just fine. Otherwise, documenting for FCC filing is the next step.

In a case of a 911 hang up (or worse, just hang) abuser we had on one of my machines, we identified a youth from a ham family. We advised Mom, who, without admitting his guilt, advised the youth and the problem went away. It is the big kids, 20-50 year olds that are the real problems when they surface.

nace@lheavx.gsfc.nasa.gov (Nate) wrote:

:>Is there a generally excepted calling frequency within the Novice / Tech + portion
:>of the 10 meter band?

Sure is Nate, but it depends on what you are calling for. If you can talk with your fingers try 28.120 for CW contacts. If you want to collect 10-10 numbers try 28.345, 28.375, and 28.425. If you just want to chew the rag, try 28.390, & 28.400.

If you tried these and get no answer then maybe the band isn't open. You can check the 28.300-28.175 range for the CW beacons. If you don't hear any beacons it doesn't mean that the band is not open. It just might be open to some place that doesn't have any beacons in operation. I've noticed that when CEN. AM. is coming in I've never heard a beacon form that area.

Seems to be a lot of E-skip lately on 10 but hard to predict when and where. I seem to get a short opening in the mornings and another one in the evening or night. Some times the band is dead all day and then opens up big time at night. You just have to get in there and dig it out when the time is right. Hope this helped some.

Further comment here...I wonder why the ARRL and everyone else suddenly has their shorts in a knot over the proposed grab after 2M. Observant readers of Aviation Week & Space Technology, or those with access to old issues, will find Motorola advertising from two to three *years* ago, perhaps more, promoting their Iridum satellite network (which should now be dubbed "praseodymium" since it's 66 rather than 77 satellites, but that's another story) and announcing that 146-148 MHz was to be one of the frequency bands used by the service. Where were we then, I most humbly ask?

Just imagine that some people communicate and enlighten via sarcasm
and humor. Also imagine that "physical radio channel numbers" and
"frequency channelization" or "tuning step size" are not in any way
related on amateur frequencies, especially where commercial radios or
other converted units are in use. Having fun WITH someone is not the
same as laughing AT them.

This thread has become a mish-mash of psuedo-related and unrelated
information. I do not wish to be "categorized" as a "no-code basher",
because I am not and I didn't.

Smile and enjoy the show...

>barrier. For higher speeds, you basically have to learn it over. Is this
>true?

Yes, that's true. Learn the letter sounds as units. The easiest way to
do that is to learn the sounds at a rate that is too fast to allow you
to consciously recognize the individual dit and dah elements of the
character sound as separate entities.

>I have also heard that a good way to learn high-speed code is to listen to
>high-speed tapes and pick out the letters you can pick out and do this
>over and over until you learn the code.

That's *a* way. When you're starting out, however, it is better to
drill the letters in a way that fixes the letter sounds in your
mind. One of the better drills for that is to use a computer program
to repeat the letters which sound *least* alike (IE are the maximum
Hamming distance apart in the signal space you are creating in your
mind) in pair and triad drills until you are bored to tears. The
boredom is important. It puts the conscious mind out of the way and
lets the subconscious take over. You have to let the subconscious do
the letter sound recognition, the conscious mind can't handle it as
speeds increase above about 10 WPM.

A program that sends letter pairs and triads to you and expects
you to respond by typing the letters is very good. It should
go rhythmically along until you hit a "sour" note, then it should
"reward" you with a loud raspberry sound to remind you to get back
to business. (Sort of like the ruler the nuns applied to your
knuckles when you made an error, it is very effective in improving
conditioning.) If you don't grow to hate the program, it isn't
doing its job.

You also want to avoid copying plain text when you're learning the
letter sounds. Your mind will start to try to make sense of the text.
That distracts from conditioning an automatic recognition of the
letter sounds. Later, when character recognition is fully automatic,
you may be able to allow the conscious to see what's being spelled
while you copy. Since it isn't involved in the copy process, it is
free to think about what's being said.

>Basically, I want to learn the code, and I want to upgrade as high as I
>can go, but I really don't want to waste my time learning and re-learning
>at different speeds. If I actually learn the code at higher speeds, how
>will it affect my comprehension at lower speeds?

It'll be a bit harder to copy slow Morse (sent as real Morse with
proper timing ratios). But you can do it. Once the proper pattern
is burned in, it's burned in for any speed, you just have to adjust
the tempo. For the 5 WPM *test*, however, the ARRL VEs use Farnsworth
timing, so the individual characters will be sent at the higher speed,
with long spaces between the letters to make the average rate 5 WPM.
This isn't really Morse Code, and it has a very unnatural rhythm,
but it is what they use on the test. Your learning strategy will
pay off here since the individual characters will still sound like
the ones you learned.

>The Code has always been a sore spot with me, but I am really motivated,
>and want to learn it now. Any suggestions would be GREATLY appreciated!

Don't think, just let the body do. You can't think your way through
code copy. You just have to condition the body to do it. Drill, drill,
and more drill is the only way to do that efficiently. It's boring if
it is working. If it isn't boring, you're doing something wrong.

An analogy may be helpful. A drill commonly used to improve fielding
skills is to bounce a baseball off a wall and catch it, over and over
and over and over, until catching it is purely automatic. You don't
think, the body just does. That's what you're trying to do with the
character sound patterns.

Your ear detects "didah" and the body (the pre-processors in the
auditory nerve trunk and the mid-brain) automatically recognize the
pattern and the mid-brain and spinal nerves tell the finger to strike
the 'A' key (or print an 'A' on paper) without bothering to inform the
conscious sitting up top that anything is going on. This is the pure
reflex copy that allows you to efffortlessly copy high speed Morse
code groups for hour after hour. If you involve the conscious mind,
you'll quickly become fatigued since it will have to "concentrate",
and such concentration, besides slowing things down, is hard to
maintain for more than short periods.

Gary

Yes it does, I suppose. Reading the trade literature, I thought
that NABER was the only way to go but this must be wrong.

As for me, I'll stick with my FCC GRT, further endorsed. <g>

6264. US License Examination Opportunities Scheduled 7/26/96 to 10/28/96

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-26 00:00:00 UTC
From: "Bart Jahnke, KB9NM ARRL/VEC" <vec@arrl.org>
Message-ID: <31F9242C.1015@arrl.org>
Source record: 220346

You can Email the ARRL/VEC (or this page's content
administrator) at "vec@arrl.org".

When viewing this list, if the list appears to be cut
off (stops somewhere in the middle of the state's listings)
try downloading the entire file then viewing it off line.
Some WEB browser programs have exhibited this problem.

****

Have you recently passed your test? Find out your new call sign and/or
license privileges using the following World Wide Web URL (or by using
the phone number shown below):

http://www.ualr.edu/doc/hamualr/callsign.html

or look for this link from the ARRL WEB page at

http://www.arrl.org/

At ten (10 days) after the test session call 860-594-0300.

****

AMATEUR RADIO EXAMINATION OPPORTUNITIES

****

Want to find out what if your new FCC license has been granted?
Has it been 10 days since you took you examination?

If so, Call ARRL at 1-860-594-0300 (8 am to 5 pm weekdays, eastern time)
to find out. We suggest that you not call the FCC (should you choose to
call the FCC at 1-800-322-1117 during business hours, be aware that their
number is normally busy).

Your hardcopy (printed) license would follow shortly after the license
grant is indicated in the FCC Amateur Service data base.

If your test was coordinated through the ARRL/VEC, license turnaround
time will be approximately 7-15 days. This includes 1-5 days for the
VE team to complete their processing (the team has up to 10 days before
they must mail the results), 3-5 days between the VE team and the VEC;
2 business days at the VEC (in some cases only 1 day); and 1-3 business
days at the FCC. Allow 5 business days from the date that the VE team
estimates the test session results will reach the VEC.

****

NEED AN FCC FORM 610?

The ARRL/VEC can supply you with your needed Forms 610, whether they be for the Reciprocal Permit for Alien Amateur Licensee, Form 610-A; Club/Military-Recreation/RACES station, Form 610-B; or Form 610 for Amateur Operator/Primary Station License. FCC Form 610-R is a computer generated renewal form that will be sent from the FCC (beginning September 1995) to licensees whose license is to expire within 90 days. Form 610-V is the special application for persons seeking a Vanity call sign (see below).

Several FCC forms, including Form 610, are available through the FCC's fax-on-demand service by calling 202-418-0177 (request form "000610" for Form 610, form "006108" for Form 610V).

You can obtain FCC Form 610V along with FCC form 1070V and FCC vanity call sign information fact sheet PR 5000, number 206v) by writing ARRL, 225 Main Street, Newington, CT 06111. You must include an SASE.

Form 610 or other forms, including Form 610V, are also available from the FCC via the internet at:

http://www.fcc.gov/Forms/

or

ftp://ftp.fcc.gov/pub/Forms/

The FCC Forms Distribution Center will accept FCC forms requests by calling 800-418-3676.

****

STILL NEED TO PREPARE FOR YOUR EXAM?

If you would like information on how to become licensed; or how to locate Amateur Radio clubs, instructors, licensing classes and/or Novice examiners in your area; please contact the ARRL Educational Activities Department (EAD) at 860-594-0301. The EAD can also provide information on recommended study materials. Electronic mail may be forwarded to the ARRL EAD via USENET at "ead@arrl.org" or via MCI Mail to MCI ID: 215-5052.

****

THINGS TO BRING TO EXAMINATIONS

Bring a photo ID along with a second form of identification (else bring two non-photo forms of ID); bring your original FCC license and a photocopy of your license (if you are currently licensed); bring the original and a copy of any Certificate(s) of Successful Completion of Examination (CSCEs); if necessary, bring a scientific calculator (that does not have the ability to store formulas); bring a pen and two pencils; and be sure to bring payment for the test fee

if charged by the VEC.

****

EXAMINATION CREDIT IS AVAILABLE AS FOLLOWS

By presenting an original, current FCC-license, the following
exam credit will be conveyed to the applicant by the VE Team:

Novice - Elements 1A and 2
Technician (dated after 2/14/91) - Elements 2 and 3A
(*)Technician (dated before 3/21/87) - Elements 1A, 2, 3A and 3B
Technician Plus - Elements 1A, 2 and 3A
General - Elements 1B, 2, 3A and 3B
Advanced - Elements 1B, 2, 3A, 3B and 4A
Extra - All elements

Footnote:

(*) For grandfather Element 3B credit, only an original license
or a copy which was issued on or before 3/21/87 is acceptable by VEs.
VECs may be able to allow such credit based upon an original CSCE
issued on before that date which shows Element 3 credit for passing
the (then) 50 question Technician/General written test. If such
documentation has been destroyed, the FCC will itself issue the
necessary verification. To obtain such verification, acceptable
by all VE Teams and VECs, write to FCC and request a "Letter of
Verification of Technician License Held Prior To March 21, 1987".
Mail (or fax 717-337-1541) your request to: FCC, 1270 Fairfield Rd,
Gettysburg PA 17325-7245. If you include reference to a fax number
in your reply, the FCC will fax your verification letter to you.
Normal turnaround at FCC is 3-5 business days after receipt.

By presenting an original Certificate of Successful Completion
of Examination (CSCE), the following credit is conveyed:

* For Technician licensees: A CSCE showing Element 1A, 1B or
1C credit qualifies the holder for Technician Plus HF privileges.
The CSCE may have been issued more than 365 days earlier.

* For others: A CSCE issued up to 365 days earlier conveys credit
for the element(s) shown as passed. A Physician's Certification
on a Form 610 is acceptable by a VE Team for 365 days after the
Physician's signature date. Once accepted by the VE Team,
assuming the applicant qualifies for a General or Advanced license,
a CSCE is issued showing Element 1C (or "Physician's Cert. and
Release: 1C") credit is valid for 365 days toward an Extra class
license.

****

The following test session information is provided by the
ARRL/VEC for the upcoming eight to twelve week period. For
further information, please contact the test session CONTACT

PERSON at the telephone number provided. If necessary, you
may contact the ARRL/VEC at 860-594-0300 for additional
information. Electronic mail may be forwarded to the ARRL/VEC
via USENET at "vec@arrl.org" or via MCI Mail to
MCI ID: 653-2312 or 215-5052.

Although the test session information presented here does
not indicate whether walk-ins are accepted or not, most test
sessions do allow walk-ins. We encourage you, however, to
always contact the CONTACT PERSON at the telephone number
provided so that the VE Team is aware that you be attending
the test session.

EXAM LISTINGS - DEFINITION OF FIELDS

STATE
Test Date,VEC,City,Zip-code,Contact Phone,Contact Person

The SECOND field in the following listing specifies the VEC
which is coordinating this examination. This single-character
designator denotes the VEC as defined below. An "A" (for example)
indicates that this examination is coordinated by the ARRL/VEC.

For further information on any examinations listed, or if you do not
find any examinations listed for your area, you may contact
any of the coordinating VECs below.

A = ARRL/VEC, 225 Main St, Newington, CT 06111; (d) 860-594-0300
The 1996 test fee is $6.05.

X = Anchorage ARC, 2628 Turnagain Parkway, Anchorage, AK 99517;
(d) 907-786-8121, (n) 907-243-2221 (or) 907-276-5121
(or) 907-274-5546. No fee.

C = Central Alabama VEC Inc., 1215 Dale Dr SE, Huntsville, AL 35801;
205-536-3904

E = Golden Empire ARS, PO Box 508, Chico, CA 95927; No phone.

G = Greater Los Angeles ARG, 9737 Noble Ave, Sepulveda, CA 91343;
818-892-2068, 805-822-1473.

J = Jefferson ARC, PO Box 24368, New Orleans, LA 70184-4368;

To all radio amateurs

SB PROP ARL ARLP031
ARLP031 Propagation de KT7H

Recently we had to skip a number in the bulletin numbering sequence.
If you think you are missing one, don't worry.

Solar flux was down an average four points last week relative to the
previous week. Except for July 19, there have been no sunspots
visible for 11 days in a row.

Today should see the return of old region 7978 on the Sun, which
should bring a small rise in solar activity. Look for solar flux to
gradually rise to near 80 by August 2, and then fall below 70 a week
later. No geomagnetic upsets are expected from this region.

Sunspot Numbers for July 18 through 24 were 0, 0, 12, 0, 0, 0 and 0,
with a mean of 1.7. 10.7 cm flux was 66.8, 64.9, 66.1, 65.4, 65.1,
66, and 66.7, with a mean of 65.9.

********************************************************************************
Original text, by the F.C.C.. Available on their WWW site as
nrw16036.txt
********************************************************************************

NEWSReport No. DC 96-72 ACTION IN DOCKET CASE July 25, 1996

FCC CREATES A NEW LOW POWER RADIO SERVICE
IN THE 216-217 MHZ BAND
(WT DOCKET NO. 95-56)

Today the Commission adopted rules creating a new Low Power
Radio Service (LPRS) in the 216-217 MHz band. LPRS will be authorized
as a Personal Radio Service under Part 95 of the Commission's rules.
LPRS devices will be authorized on a secondary, non-interference
basis, for short-range, lower power communications including auditory
assistance devices for persons with disabilities, health care
assistance devices for persons with illnesses, law enforcement
tracking systems, and point-to-point network control communications
for Automated Maritime Telecommunication Systems (AMTS).

The Commission's action furthers the public interest and
benefits various specific sectors of the public. First, it promotes
the Commission's goal of fostering efficient and effective utilization
of radio spectrum because it establishes a use for the 216-217 MHz
band, which had been found unusable for high power communications due
to the potential for interference to television (TV) channel 13
reception. Second, it creates benefits for the public by: (1)
improving the quality of life for persons with disabilities; (2)
facilitating radio-based health care services; (3) strengthening law
enforcement, and (4) maximizing efficiency in the use of AMTS coast
station frequencies. It will improve the quality of life of people
with disabilities by facilitating their participation in activities
and events in educational settings and public gathering places. It
will also improve the efficiency and effectiveness of health care
providers. Additionally, providing spectrum for law enforcement
tracking systems will strenghthen law enforcement by facilitating
reduction of crime and law enforcement costs by promoting development
of state-of-the-art law enforcement tools which already have been
successfully implemented in major cities nationwide on an experimental
basis. Also, low power point-to-point network control links will
benefit tugs, barges, and commercial vessels by increasing the
efficiency of channel usage on AMTS coast stations.

The Commission determined that LPRS transmitters will be
authorized by rule, rather than by individual licenses for each
```

transmitter, in order to promote the rapid deployment of these devices without imposing unnecessary regulatory burdens on the public. In addition, to reduce the potential for harmful interference to other LPRS devices and TV reception, these transmitters must be type accepted in accordance with technical standards set forth in the

rules. Under the technical standards for LPRS, manufacturers will have the flexibility to produce narrowband (5 kHz), standard band (25 kHz), or wide band (50 kHz) equipment with all transmissions limited to 100 milliwatts effective radiated power (ERP). Additionally, the rules permit AMTS wide band emissions (250 kHz) in the upper portion of the band.

Action by the Commission July 25, 1996, by Report and Order (FCC 96-315) Chairman Hundt, Commissioners Quello, Ness, and Chong.

If you violate a court order its called "contempt of court" and judges
don't take too kindly to it. Sanctions include monetary fines as well
as jail time.

Violating a civil ruling places you in contempt of court, and judges
can toss your butt in jail for as long as they like for that.

>
> My assumption is that the UHF would have tendencies of behaving a
>lot like 800 MHz cell phone freqs by bouncing off buildings. I would
>think that VHF would better penetrate buildings.
>
> Is this assumption correct?

Not necessarily. The shorter UHF waves can often penetrate buildings
better than the longer VHF waves. That's because they can get through
openings which act as waveguides beyond cutoff for the longer waves.
This is primarily noticable for buildings of metal frame construction
or which use metal reinforced concrete construction. The greater ability
of the shorter waves to "bounce" around can actually be an aid inside
these buildings because it lets them get deeper into the building. There
will be more nulls, but they are smaller with the shorter waves. Often
moving only a few inches will make the difference between no signal and
a strong signal. For wood frame buildings, there is little difference
unless penetration needs to be very deep. In that case only, the longer
waves may have a slight advantage in some cases.

> Also, how well would 49 MHz perform in these conditions?

Not well at all. First, the 49 MHz equipment is very low power,
so there's less margin for signal attenuation. Second, these are
even longer waves and have greater difficulty penetrating through
openings. Note, at very much longer wavelengths, such as AM broadcast
or low HF, penetration mechanisms are different. The signals can
conduct along structural members, so there can be deep penetration
in those cases. Again, it will be spotty, depending on the particular
construction and position within it.

There is no guarantee that any frequency will penetrate to a particular
spot in a structure. One advantage of the shorter wavelengths is that
the nulls and hot spots will be much closer together. So you can often
move only a few inches and greatly change the signal strength you will
see.

Note also that longer wavelengths will refract more easily around
and over structures. While this works against penetration, it does

allow signals beyond literal line of sight. This has an impact on the range you may have. Use of HT to HT at one 1 mile can be a problem if there is intervening terrain. Lower frequencies may have a slight advantage in this situation.

As you can see, there are a number of different factors that have to be considered. I'd suggest working with your vendor and actually *testing* the various radios you might wish to use in the actual locations where you intend to use them before making a major purchase.

Gary

6277. Re: Stupid Question about wire guage

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-27 00:00:00 UTC
From: gary@ke4zv.atl.ga.us
Message-ID: <1996Jul27.123743.29287@ke4zv.atl.ga.us>
Source record: 220209

In article <31F9AC43.7F88@warwick.net> Joe Moor <joemoor@warwick.net> writes:
>I'm having a mental block.
>
>How does one figure the adequate wire guage for a
>specific application. I know I've seen charts, but
>can't find them now I need them.
>
>Here's my situation 12V @ 15 amps max. What wire
>guage is safe?

The smallest gauge which is "safe" is 18 gauge copper. This
is the smallest wire which can handle this current continously
while remaining at a temperature of less than 212 F. Note,
however, that this would not be a good choice.

There are two factors that have to be considered when choosing
an appropriate wire gauge. Those are the ampacity and the voltage
drop per foot. While 18 gauge has (barely) sufficient ampacity,
the voltage drop will likely be excessive for all but the shortest
runs.

12 gauge wire is a better choice for moderate length runs at this
amperage in residential wiring. However, that assumes a tolerable
voltage drop of 10%. For electronic devices operated off of 12 volts,
a 10% voltage drop can have a serious performance impact. So it
would be wise to use an even larger wire gauge. 8 gauge is a good
choice for vehicle use.

The ampacity of a wire depends on several factors, including
insulation type and whether there is free air circulation around
the wire or not, but the major factor is the ampere per circular
mil value. 18 gauge wire is 40.3 mils, so it can handle about 16
amps. This is a *limit*, however, and you want to operate well below
that limit if you can.

The voltage drop is a function of the ohms/foot value of the wire
of course. Larger wires naturally have lower ohms/foot values.
18 gauge copper is about 0.006 ohms/ft. So a 10 foot run would
have a voltage drop of 0.9 volt at a 15 amp flow. That's significant
for two way radios operating off of 12 volts. OTOH, 8 gauge wire
has an ohms/ft value about 10 times less than 18 gauge, so the
voltage drop for a 10 foot length would be around a tenth of a
volt. That's insignificant. Usually, losses at wire terminations
will dominate over such a small copper wire drop.

Perhaps the frequencies are publicly owned, but the REPEATERS are, in a vast majority of cases, PRIVATELY owned, and are available to the general amateur public through the graciousness and public-spirited attitude of their owners. This is a privlege, not a right! A privlege which can be withdrawn at the owner's discretion. If a repeater user operates on that machine in a manner which is offensive to the owner, or violates FCC regs, they have every right to withdraw permission for that amateur to use THEIR PROPERTY. If the user refuses, legal action is extreme, but depending on the severity of the offenses, not beyond reason.

Keep in mind, also, that the owner and/or trustee of that repeater put their OWN licenses on the line for every user of their repeater. If some idiot lid of a jammer was doing something to jeopardize MY license, I'd take whatever action was necessary to keep that from happening.

An analogy: If I allow you to use my car to drive down a public highway, that's fine. But, if you use my car to chase people off the road, rob a bank, sell drugs, or whatever, I can and will withdraw that privlege. If you refuse, I can take legal means to force you to stop using my property. I can't personally prosecute you for violating the law on that public highway, but I don't have to let you use my car to do it.

> >While I'm not in any way defending the activities of a repeater jammer,
> >threatening to file frivilous litigation is not the answer.

There's nothing frivolous about taking any necessary action to protect one's own property. (and license)

6280. Making morse midis

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-27 00:00:00 UTC
From: angus@hamgate.concordia.ca
Message-ID: <4tdjgs$pf1@newsflash.concordia.ca>
Source record: 220212

I'm trying to make a midi that is merely composed of morse code, but I'm having quite a lot of difficulty. Obviously, what I'm requesting shouldn't require a lot of power from the application that I would compose these midis, however, finding an application that can generate midis from the PC keyboard is turning into a quite an ordeal.
Are their any applications out there that:
-allow for PC keyboard input
-can play a variety of sound (or one sound that
sounds like the morse beep)
-AND runs under Win95?

Are there endorsements for CW, Phone, etc..... ?

What is the QSL route to Jupiter? Been trying to get my card with no
success yet.....

I have a Pac-Comm Micropower 2 TNC I am wanting to sell. It has the manual and box and works great. This is very similar to the KPC's.

$65.00 + shipping to your door.

Thanks

Even repeater frequencies are, in a sense, privately owned. While it is
true that Part 97 indicates that nobody "owns" a frequency, the FCC
often relies on something called "good amateur practice". It is viewed
as *not* being good amateur practice to work simplex on the input or
output of a repeater frequency.

So, if you choose to operate on the input/output of a repeater, that's
fine. As long as your intent is not to deprive others of the use of
said repeater. Not being welcome on a repeater and choosing to operate
on the repeater's input/output frequency is equivalent to malicious
interference, and, more appropriately, not "good amateur practice".

Written by Clayton, at 5:46p on 07-27-1996 with All in mind.

Greetings: Does anyone know of ANY mods for the HTX-100 10-meter rig?

I know it's a realistic... but, I'm using it to drive transverters to 2 mtrs and 440 Mhz.... so I need to have 26-30 Mhz on the input.

Any thoughts...

I also need to be able to REDUCE the power.. or at least control it ... any thoughts on adding a Pot to resist the drive prior to the P/amp.???

Thanks
Clayton

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-27 00:00:00 UTC
From: RichK <kucharik@fast.net>
Message-ID: <31FACD98.692F@fast.net>
Source record: 220220

I have a PK-88 which recently started shorting chip bypass capacitors. I have replaced 3 so far. Two were dead shorts and one was around 40 ohms. The 7805 regulator is 4.98 volts. The unit is about 4 years old. Anyone else have this problem? This seems like a generic problem and I will probably replace all of them as a matter of course.

Thanks
Rich KE3HG

Ten Paradoxical Commandments of Leadership

1. People are illogical, unreliable, and self-centered.

Love and trust them anyway.

2. If you do good, people will accuse you of selfish, ulterior motives.

Do good anyway.

3. If you are successful you win false friends and true enemies.

Succeed anyway.

4. The good you do today will be forgotten tomorrow.

Do good anyway.

5. Honesty and frankness makes you vulnerable.

Be honest and frank anyway.

6. The biggest person with the biggest ideas can be shot down by the
smallest person with the smallest mind.

Think big anyway.

7. People favor underdogs but follow only top dogs.

Fight for a few underdogs anyway.

8. What you spend years building may be destroyed overnight.

Build anyway.

9. People really need help, but may attack you if you do help them.

Help people anyway.

10. Give the world your best and you'll get kicked in the teeth.

Give the world your best anyway.

6292. This Week in Amateur Radio #174 (for air through 8/2/96)

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-27 00:00:00 UTC
From: "Stephan M. Anderman" <sanderman@delphi.com>
Message-ID: <p7NtvbO.sanderman@delphi.com>
Source record: 220224

Here is a summary of news items covered on edition #174 of
"This Week in Amateur Radio", North America's satellite-delivered
audio bulletin service, for the week ending 2-Aug:
-
1. Widow and Family of Recent AMSAT SK Slain in Kansas
2. ARRL Board Meets in Connecticut, Award Winners Announced
3. Winners of WRTC-96 Crowned after 18 Hour Contest Event
4. FCC Reports on Popularity of Vanity Call Sign Program
5. "Ancient Amateur Archives" with Bill Continelli, KE2XB
6. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
7. Special Event Station Calendar
8. SAFEX II Equipment Operational from Aboard MIR Complex
9. FCC Opens Proceeding to Allow Electronic Filing of Comments
10. Ken Cameron, KB5AWP, to Leave NASA Astronaut Corps
11. Cause Found for Recent Power Blackout in Western US
12. Weekly Propagation Forecast
13. Frank P. Maggiore, N3FGN (ex-K3GQC), SK
14. "The RAIN Dial-up" from Chicago
-
This week, Bill Continelli, KE2XB, unveils his new feature, the
"Ancient Amateur Archives". This semi-weekly series explores the
history of amateur radio and those who developed the activity. More
than just a history lesson, Bill discusses the stormy infancy of the
activity, traces the evolution of ham radio from spark to satellite,
and reveals other secrets of the "Archives". We welcome KE2XB to
the staff of "This Week in Amateur Radio".
-
(Beginning this week, registered affiliates with Internet e-mail
capability will receive a copy of the weekly program log along with
this summary for their convenience. Sorry, we cannot honor
affiliate requests to send this info via AX.25 packet.)
-
Funding for the program's transmission and production expense was
provided this week by a grant from the Stoddard Family of
North Webster, Indiana, and users of the N9SBH repeater system,
where "This Week in Amateur Radio" is heard in Elkhart, Warsaw, and
Ft. Wayne on 224.16 and 146.505 MHz.
-
"This Week in Amateur Radio" is a weekly amateur voice bulletin
service, produced by Community Video Associates, Inc., a New York
State not-for-profit corporation based in Albany, NY. The program
is heard on the "W0KIE Satellite Network" each Saturday at 9:00 PM
(EDT) on the Hughes Communications SBS-6 commercial communications
satellite, transponder 13B upper, located at 74 degrees west

longitude in equatorial geosynchronous orbit. The transponder center frequency is 12.019 GHz; tune up in frequency to 12.031 GHz. Program audio is on the 6.2 MHz analog subcarrier and carried on VHF/UHF repeaters throughout North America and on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.
-
Production and transmission expenses are underwritten by donations from repeater operators, amateur radio clubs, and individuals. Further information is available from George Bowen, N2LQS, at 518/283-3665 (email kxkvi@delphi.com) or Stephan Anderman, WA3RKB, at 518/664-6809 (email sanderman@delphi.com). You may also reach them @ WA2UMX.FN32AW.ENY.NY.USA.NA via amateur packet.

I don't follow all the current legal discussions in the ham groups, but this one has me a bit confused. Hopefully, as Steve says, maybe someone 'out there in internet land' has more information.

Here's my question: If a repeater group 'sued a known jammer', I assume it would be a civil suit (as opposed to a criminal suit) unless the U.S. has gotten so law suit happy now that individuals can file criminal charges against each other. So how do people go to jail as the result of a civil law suit ? Is there a special radio prison for bad hams ?

From: cerebus@gate.net
Message-ID: <4tc5g5$1cm8@news.gate.net>
Source record: 220226

My company will be purchasing HTs for business use in the next few days and I'm debating between VHF (170) and UHF (460) radios. I would like to get a mile range (conditions permitting). They will be used in and around 2 or 3 story apartment complexes with a 1/2 mile range, and a lot of other uses requiring penetration of buildings.

My assumption is that the UHF would have tendencies of behaving a lot like 800 MHz cell phone freqs by bouncing off buildings. I would think that VHF would better penetrate buildings.

Is this assumption correct?

Also, how well would 49 MHz perform in these conditions?

Hi Dave,

I have done some testing with the IC481E (European 70cm version of your
IC281h) and it performed very poorly with 9600bd packet. BBS downloading is
ok, but transmitting long packets produces lots of retry's.

The radio also suffers from very slow tx<>rx turnaround time. IMHO the
radio is NOT 9600 ready.

Go with the UHF radios for use in/around buildings. Try Motorola
MT2000 handhelds. Mine works great for both HAM and commercial bands.

It isn't legal if you are accessing the autopatch over the air
through the repeater. However, most control units incorporate the
patch circuitry too. These are equiped so that a call may be
placed to the unit over the telephone and access the controller
without ever transmitting over the air. This is fine and
I believe what you are actually trying to convey.

Thanks for saving me the trouble of looking up that regulation, Gary. I've just recently returned to hamming after an absence of several years, and I wasn't sure if that restriction still held.

We have a few people on one of our best 70 cm repeaters who are on it constantly, sometimes 10-15 times a day. It is obvious that they are trying to avoid phone charges, because two of the parties are brother and sister. One wonders if the've ever heard of a telephone, but there's no doubt what they are doing. At least one of the parties holds an Advanced Class license, so the newbie excuse won't work.

Everyone and his brother has a cell phone in this area, so there's no lack of commercial facilities available.

That particular repeater group has a Web page, so I plan to report this abuse and violation to the repeater owner.

Hi Nat,

JOTA is held the 3rd weekend of Oct. every year. This year it will be Oct. 19th & 20th. You need your gear and to be a control op. It is a great time and open to all scouts, nice to get a few units close and use 2m, recruit hams and then go to a roundtable and get units. Last year we put a station up at our council office and lots of boys came thru. Hope to hear you on, I also hope for a 6m band opening that day.

Yours in Scouting

I'm having a mental block.

How does one figure the adequate wire guage for a specific application. I know I've seen charts, but can't find them now I need them.

Here's my situation 12V @ 15 amps max. What wire guage is safe?

TIA N2TQL

James,

I don't see a conflict of interest here. Many lawyers represent competing companies. In fact, you generally seek a lawyer with experience in your industry.

The lawyer can never divulge information about one client to another, so he can't recommend actions to either about the other unless one client asks him to talk to the other. There is no conflict of interest unless one of his clients decides to take legal action against another and asks his advice. At that point, most lawyers tell both of their clients to hire another lawyer to handle that legal action.

Conflict of interest means that he is breaching confidentiality or using knowledge of one client to benefit the other. Just the suspicion of this can cause his clients to leave. Proof gets him disbarred. No wonder he is pissed off.

73,

John

>
> 73, Cecil, W6RCA, OOTC (not speaking for my employer)

This is excellent advice. The reason is that as the speed of the character spacing increased, the sound changes. This results in making you have to do two things: 1) copy code faster 2) learn the 'new' sound of each character.

A couple of other pieces of advice.

1. When you are studying for a particular speed, say 13wpm, practice trying to copy 15wpm and then 13. You may miss lots of characters at 15, but when you copy 13 it will sound slower. This helps make up for any "nervousness' factor when you take your test. For 20wpm, practice by first copying 25. That is what I did for my extra class license. Even though I never copied a high percentage at 25, it made 20 sound slower than it really is.

2. Copy coded groups of characters, not clear text unless you are always copying different clear text. Why? Because you will actually remember the clear text and will be copying what you remember, not the actual code being sent.

This advice comes from personal experience of upgrading, past experience of teaching code classes by myself and other members of my amateur radio club. As a former morse code interceptor in the U.S. Army Security Agency many, many years ago, I can relate to the struggle of learning code: 6 months of school copying code most all day. We had a difficult transition to make. Up to 10wpm, we copied with a pencil and then moved to a mill (typewriter with only upper case characters) and had to learn to recognize the different sounds of the characters as the speed increased. But, when I got my ham license in 1976, the code came back very readily. When I was in the army, I was copying about 45wpm on the net I was assigned to (those Russians could send fast code). But, as the coping became a reflex (one ear hears A, finger types A, other ead and most of brain listening to Radio Luxembourg play the top 40 hits [we had two receivers, one we used for our assigned net, the other for listening to music until the sergeant came by and twisted the knob]), it was never a conscious effort and I had to spend 2 or 3 weeks practicing for 20wpm for my extra. Now, I only use voice.

Good luck!

The following is a quote from from a Hindu treatsie:

"It's not the action, not the fruit of the action, that's important. You have to do the right thing. It may not be in your power, may not be in your time, that there'll be any fruit. But that doesn't mean you stop from doing the right thing. You may never know what results come from your action. But if you do nothing, there will be no result."

Greeetings,

I'm planning a trip up to the Yukon territory (and possibly Alaska) scheduled for the middle-late August and possibly into mid-September. the main purpose of this trip is to record more 'sounds' of the aurora-borealis using my "Natural Radio" VLF receivers in the 400 hz - 11 khz spectrum (see http://www.netcom.com/~spmcgrvy/)

I also am taking along a CW rig (30 watts max) to work many hams and add more Yukon catches to their QSL collections! I would be VERY interested in joining other ham(s) who might be in the area in their campers and RV's (etc.) and for a few days, a week, or whatever, collaborate in a sorf of "DXpedition" up there and we could work the world. It might be quite fun!

Please e-mail me at: spmcgrvy@ix.netcom.com

73,

Stephen McGreevy, N6NKS

>Cheers -- Mark

Mark, maybe the closing of repeaters would not be such a bad thing.
Personally, I think repeaters do more damage than they do good.
Close them all, and we don't have to worry anymore about who does or
doesn't what on which repeater. Most towns I have driven thru I
couldn't find anyone to talk to, more less find an open autopatch to
order a pizza.

1. In the U.S. the constant argument about frequency coordination
would disappear if there were no repeaters to coordinate. I imagine
thats still going on, seems I just read the ARRL is going to start
paying people to do it.

2. Repeaters tend to break hams up into small (unfriendly) groups.

When I lived in the U.S. I traveled many times up and down 95 between
Florida and Washington D.C. Trying to find someone to talk to on any
of the available repeaters was virtually impossible. Many times I
heard someone on one of the MD. repeaters 'This is W9VAC passing thru
on vaction, anyone around ?' which was usually followed by 'W3LID
this is W3KID' - i.e., we are here, but we don't want to talk to you.

3. Repeaters give hams (especially new hams) a very false sense of
their communications capablitites. They tend to make people very lazy
when it comes to equiping themselves. 'Why should I put up an antenna
for 2 meters ? I can hit the repeater with my HT from any bathroom in
the house ?'.

4. Repeaters don't teach hams how to pool their resources for a common
good. People don't like a repeater for one reason or another, so they
go put up their own. In a place as small as Guam, we have had as many
as five repeaters on VHF at one time. For an area 35 miles long and 6
miles wide. None of which covered, or do cover, half the island. All

of which could have been combined into a system with remote receiver sites that would provide much better coverage for the island. At any given time in Guams history there haven't been five hams on two meters at the same time, but we still need five repeaters. Sure, in an area where there are a lot of hams, there are a lot of repeaters, and they are busy all the time. Busy with what ? Busy with people talking for the sake of talking, not for communications purposes. Fred and Charlie might be two blocks apart, but they rag chew on the repeater for an hour, about nothing.

5. Autopatches don't promote a 'we' attitude, they promote a 'me' attitude. Lots of people are interested in repeaters for one reason - the autopatch. Take that away and see how many users stop paying dues and go to another clubs repeater. With todays cellular phone systems, I can't see why anyone would want to use or need an autopatch. All this crying about CW being 'ancient' and 'outdated', how did autopatches get overlooked ? Cellular phone promote 'quality' phone calls. Autopatchs do the same thing as a repeater does - they cause more unnecessary calls to be made.

6. The control operator on a power trip syndrome. It's my repeater, so I make the rules. Screw the FCC.

It's been a long time since I had the pleasure of leaving the house at 5:45 am and being stuck in traffic for 2.5 hours on the way to work, but I still remember the senario on the local repeater back in MD.

5:00 AM - The rush hour chatter starts. Large group of people. Various subjects of discussion.

6:00 AM - Group getting larger. More subjects.

6:15 AM - Repeater mysteriously turns off (Because Mr. Control Operator is ready to leave for work, so he dialed the repeater on his phone from the house and turned it off).

6:27 AM - Repeater mysteriously comes back on, immediatly followed by a call by Mr. Control Operator to one of his groupies. (And immediatly preceeded by Mr. Control Operator using the radio in his car to touch tone the repeater back on).

6:28 AM to 8:15 AM - A discussion of Mr. Control Operators favorite aspect of the hobby, lead by Mr. Control Operator and participated in by a small group of hand picked groupies. Breakers casually ignored.

Same senario repeated at 5 PM for those who missed the morning version.....

This caused a lot of stress during commute time to the other 150 members of the 'club' who payed for the repeater, but couldn't use it while they were commuting. Some finally got smart and stopped paying.

Some of us went to simplex. And I wouldn't be a bit surprised if there are not a bunch of people who still can't figure out why the

repeater goes off at 6:15 every morning.....

How many repeaters are there that have absolutely ZERO hams who are pissed off about one thing or another that is going on with the repeater ? I'd have to guess ZERO. Because everybody listens to everything, which includes a lot of stuff they don't want to hear. I have a two meter radio on in my shack, 24 hours a day (on a simplex frequency). When the squelch breaks, it's always somebody or something I want to hear. I have a big antenna and and an amplifier and a preamp, so I have better simplex coverage than the repeaters here do anyway. And I'm never pissed off at the 2 meter radio. When I start hearing things I don't want to hear, I just pick up the phone, call a few people, and we pick a new simplex frequency.

Anyway, Mark, I think I'll go with Jeff's idea. We don't need VHF or UHF if the FCC wants to sell them off. Six meters or ten meters will work fine for local communications. And I don't really think that real hams need repeaters.

THE SEX LIFE OF THE ELECTRON

by D.C. Current

One night when his charge was pretty high, Micro-Farad decided to seek a cute little coil to let him discharge.

He picked up Millie-Amp and took her for a ride on his Megacycle. They rode across the Wheatstone Bridge, around the sine waves and stopped in the magnetic field by a flowing current.

Micro-Farad, attracted by Millie-Amps characteristic curves, soon had her fully charged and excited her resistance to a minimum. He laid her on the ground potential, raised her frequency and lowered her reluctance.

He pulled out his high voltage probe and inserted it in her socket connecting them in parallel, and began short circuiting her resistance shunt. Fully excited, Millie-Amp mumbled, "OHM - OHM - OHM - OHM".

With his tube operating at a maximum and her field vibrating with his current flow, caused her shunt to overheat and Micro-Farad was rapidly discharged and drained of every electron.

They fluxed all night, trying various connections and sockets, until his magnet had a soft core and lost all of it's field strength.

Afterwards, Millie-Amp tried self induction and damaged her selenoids. With his battery fully discharged, Micro-Farad was unable to excite his field, so they spent the rest of the night reversing polarity and blowing each other's fuses.

First, I'd like to thank all of the folks who replied to my "Learning CW-Any Pointers?" post. The code is coming a lot easier now.

I do have a few questions left, though.

1) Are the schedules for the W1AW practice published anywhere besides QST? I can't find it anywhere around here, and I'd like to try something besides tapes and computer programs.

2) After mid-August, I'll be in school, which means I'll be in a tiny apartment where the landlord won't let me put up any major antennae. Is it possible to make a working HF antenna that would fit indoors, or at least be no bigger than the average TV antenna? I was thinking of something along the lines of vertical 1/2 wave antennae, but with some pretty serious loading coils at the bottom? Any precautions? Any better ideas?

3) Are there any web sites that list new call signs? I just took and passed the no-code Tech exams, but I would like to know my call letters faster than it would take for my license to arrive.

Thanx in advance,

Mike S. Medintz

From my experiences with wefax I would imagine you'd really need to go
USB and try 3650 for starters to get yourself sorted on a good signal
[well it is here!] I was building these things by the dozen at one
time and shoe-horned them all in to the cover of a 25 way plug and
they worked very well indeed but for crystal clear results you do need
a decent signal and on one of the side bands too I seem to remember.

Well, there's an enormous amount of ideas on this topic Mike... as varied as hams themselves :-). If you can spend the $$$ (about $300), you might like the Super Hi-Q Loop made by MFJ. It claims to operate continuous from 10 - 30 MHz with just a 36 inch diameter loop. MFJ will give you a free catalog and/or free instruction manuals for their products at 1-800-647-1800.

It is sometimes possible to use very slender wire and put out a dipole or end-fed wire from your balcony that would be nearly invisible. If lucky, you could leave it out if no one notices, or you could "throw it" out when you want to operate and then reel it back in.

You might be surprised to find some landlords will allow you to put up ham antennas, as long as you don't cause any permanent damage to the building (and don't cause RFI to other tenants!)... try asking them. I travelled around quite a bit when I was in the Air Force and got permission for my antennas at each place I lived. I always requested the top floors too so that the antennas were as high above ground as possible.

Most of my operation used a vertical similar to your idea... the size was about a 1/4 wave on 20m (a little over 16 ft), and I used an alligator clip to tap a large coil at different places to work other bands also. It wasn't the greatest, but I still made contacts. I also used some wire antennas when I had ways to support them.

If your rig doesn't have a built-in antenna tuner, it would be very good idea to buy (or build) one of those too when you pass your code test(s) and get

ready to start transmitting. But for receiving only (W1AW or any)... you might even be able to just run a long random-length wire around the inside of your apartment. Be creative... many things will work!

First off, CONGRATULATIONS! There are many sites that offer this service. I usually use the University of Arkansas at Little Rock. They just changed their URL... its now http://www.ualr.edu/~hamradio/callsign.html where you can search for your name. If you only want to lookup callsigns, you can also telnet to their server at callsign.ualr.edu port 2000

I am about to pick up a back-up power source for use in the plane when I venture aloft. I usually carry my dual band HT with me along w/few other accessories. What inherent ad/disadvantages are there between these two types of cells, e.g. weight, recharge cycles, longevity, etc? I'm thinking about a 6 ampere unit to keep the weight down in my flight bag. Thanks in advance.

6340. Effects of RF on Vehicle's Computer

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-28 00:00:00 UTC
From: VUBS79A@prodigy.com
Message-ID: <4tg60a$ul8@usenetp1.news.prodigy.com>
Source record: 220113

I'm in the process of purchasing a new vehicle, and I have heard varous "horror stories" about the ill effects of RF energy on modern computer-controlled engines. Fact or fiction?

Specifically, I am running 10m with an output of 25-200 watts, and 2m with an output of 5-50 watts. No problems with either rig in my current vehicle...but then, it's an '87 model, so it isn't exactly up to date.

I will be purchasing either a Dodge Neon, Saturn Sport Coupe, Chevy Cavalier, Ford Escort, or Pontiac Grand Am.

Anyone have any experiences, comments, or suggestions? Also, what is the best way to MOUNT radios in any of the above vehicles? (Can't exactly just bolt it under the dash anymore! <g>)

Here's the COMPLETE lowdown on the upcoming hamfest here in Denver.....

The Denver Radio Club, Inc. will be holding it's 1996 Annual Ham Radio and Computer Hobbyist Swapfest in conjunction with the ARRL State Convention on Sunday August 18th, 1996 from 8:00 a.m. to 2:00 p.m. MDT at the Jefferson County Fairgrounds, which is located at 15200 W. 6th Ave. (Just west of the INDIANA ST. exit) in Golden, Colorado.

Raffle Grand Prizes are:

o 1st Prize: Icom IC-2350H Dual Band mobile OR $350 CASH
o 2nd Prize: Icom IC-T7A Dual Band HT OR $250 CASH
o 3rd Prize: MFJ 945D Tuner donated by GATEWAY ELECTRONICS

Raffle Tickets are $1 each or 6 for $5. YOU NEED *NOT* BE PRESENT TO WIN THESE PRIZES (Though it *would* be nice if you were so we can become envious of the lucky winner :-))!!!!!!

There will be the usual stuff such as Commercial exhibitors (INCLUDING dealers), ARRL Forum, Snack Bar, Technical Seminars, VE TESTING, and hourly door prizes from 9 a.m. to 1 p.m.

Swap tables are $10 in advance and $12 at the door. Setup is at 7:00 a.m. Prices do NOT include admission OR raffle tickets!!

Admission is $4 and includes ONE raffle ticket. THIS PRICE APPLIES TO EVERYONE!!!!

Talk-in will be on the 147.330+ W0TX repeater and/or 146.52 simplex.

For more information, call Guy Reed, W5GR, at 303-674-5389

Hope to see everyone there (and walk away with those GRAND PRIZES!!!
:-) heheheh)!!!!!

73's for now my friends!!

6342. CCTN Net report for 7/21

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-28 00:00:00 UTC
From: pcook@dimensional.COM
Message-ID: <Pine.SUN.3.94.960728111436.20299D-100000@nova.dimensional.com>
Source record: 220115

Hi Mike:

I am wondering about something. Last Sunday (7/21), just as I was asking for the familiar "Does anyone need to use the Colorado Connection before we begin tonight's session of the Central Colorado Traffic Net??", which is the same as asking for emergency or priority traffic.

During that call, N0DWT announced he was stranded out on the highway and was requesting assistance from the Breckenridge Area. He was unable to raise anyone from there, but we nonetheless called the State Patrol so he could get SOMETHING resembling assistance, which I felt we were able to handle during the course of the net since it wasn't a life threatening situation (which we, for the most part, did)

As a result of this, it took about 10 minutes *BEFORE* I was able to proceed on with the rest of the net. I dispensed with the normal "mumbo-jumbo" introduction and proceeded onward with the net at approximately 7:40 p.m.

George, N0ULG, was not able to check in for some reason. When I submitted my net report to George, I included an ops note detailing the discrepancy between the time of the net time and the actual time the system was in net operations (which is the above scenario I put under the category of PRIORITY traffic).

My question to you is does the above situation, described as priority traffic, qualify as being the equivelant of a formal NTS message being handled AND where do we classify such traffic in our net reports??

I look forward to your reply!! :-)

Sincerely,

Patrick Cook, KB0OXD
Central Colorado Traffic Net NCS

> over one which is in a straight line..
> Any comments would be much appreciated.

With too small a wire, resistance losses become a factor, also there is a durability problem with small wire size. 18-24 ga. standed insulated wire is a good range. Buy it by the reel and save in the long run. Pick a color to blend in, or be noticed. The insulation helps cut down kinking, as well as the corona effect. Instead of insulators, use some sort of synthetic line. Being in a rural environment, left-over tangles of the stuff is readily available to me. I have had some plastic baling twine up for five years.

Bending the wire changes the radiation pattern. Figure a way to take advantage of the antenna shape. Try moving the antenna to new configurations, talk to other people with the new pattern.

We didn't get any sort of notice from the great K1ZZ telling us to flood Motorola with email, snail-mail, and phone call (both FAX and voice) messages. At least *I* didn't see anything.....

But then too, 2 or 3 years ago, I was on Fidonet (and those who know just how "efficient" Fidonet is know what I'm talking about) and Internet (to me anyway) was only a dream....

Otherwise, I would have sent in my $.02 worth.

Speaking of the above threat, I wonder if Motorola is still planning to go ahead with this. If so, and if they're on the 'net, I'll shoot off a copy of my email letter which I sent to the Little LEO folks.... :-)

6346. Re: Sideband Q-codes ?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-28 00:00:00 UTC
From: robin@falstaf.demon.co.uk
Message-ID: <4tgd2f$11q@falstaf.demon.co.uk>
Source record: 220119

Dear All,
It is interesting that this discussion comes from amateurs who only use a portion of the whole Q code list. The full list, which was developed during World War 2 (or there abouts) was intended for use by airborne operators and is still used extensively today, on voice, because it is short, easily recognisable and breaks language barriers. Exactly the reasons that it is used on morse.

For instance, if a pilot asks air traffic for the airfields QFE he is asking for the pressure setting that will enable his altimeter to read zero when on the runway, whether it is calibrated in feet, meters or venusian thargs.

Yes, it is bad practice to use Q codes on voice for general chat but I would suggest, as air traffic have found, when a clear defined meaning is required with no ambiguity then they are very useful and I wouldn't shout at some one who used them.

I don't know what the regs say in the States but there is somewhere in the UK words to the effect "All messages should be clear, concice and a appropriate". We resort to phonetic spelling when the conditions get bad why not use Q codes for exactly the same reason or when the person on the other end doesn't speak the same language as us.

Cheers

Robin Birch

You might also want to look at htis ftp site;

"ftp://ftp.fcc.gov/pub/XFS_AlphaTest/amateur/"

This is where UALR and others get there daily updates from.
I learned about this while waiting for my original call sign. I managed to
get about 2 minutes after the fcc server listed it. They post about 3 am
every morning.

Good Luck,

Lewis (KM5BH)

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 264
BID: $OPDX.264
July 29, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, K1BV, K4CEF, W4FOA, AC6V, AB5EA, KH6BZF, NM7M, W8AEF, A92GD, DF4RD, G4BUE & DX News Sheet, HA0HW, OH2AUM, ON4CAS, OZ5AAH, OZ8ABE and PY7XC following DX information.

SPECIAL NOTE FROM EDITOR: There will probably be no bulletin next week (August 5th). My sister will be visiting from California and I plan to spend time with her and her family. Please keep sending your DX information. (You may never know, I may find time to put one together, if I receive enough information before she arrives.)

3D2, FIJI. Just a reminder, Gianni, I5JHW, will be active August 8-14th, possibly as 3D2HW. Operation will be on CW/SSB, 40-10 meter (including the WARC bands). He will primarily be on 14022 kHz CW, operating with 100 watts and a vertical. After his Fiji operation he will move onto South Cook Island and be active from August 14-20th, possibly as ZK1XO. QSL to CBA.

A3, TONGA. Paul, KK6H, advised W4FOA in a QSO that he will QRT from A35 on July 30th, (he is signing A35PM instead of A35RK as mentioned previously) and operate for two weeks from ZK2. He has also been trying 160 meters with W4FOA, regardless of what he said early about NO 160 meters. So far, Paul and W4FOA have had no success as of yet on 160.

CADXA SCHOLARSHIP. The Central Arizona DX Association, an organization of over 100 amateur operators in Phoenix, AZ, is pleased to announce the winners of their scholarship program for 1996. Awards of $500 went to the following young amateurs: John Steenis, KI7LX, of Phoenix, AZ, and Sarah Laurel Brown, N7XYR, of Page, AZ.
Both have exemplary grades, have been active in the hobby, and will definitely be valuable role models for other amateur radio operators in the future.
The CADXA believes that the future belongs to the young, and that a small effort on our part now will pay big dividends in the years to come.

Please join us in congratulating these fine young amateurs as they begin their college careers.
Additional information about the CADXA scholarship program may be obtained by contacting Gary Capek, K8BN, 5403 West Dobbins, Laveen, Arizona 85339, phone 602-237-4314 or InterNet E-Mail: gcapek@getnet.com

CHECK YOUR LOGS! Lee, KH6BZF, reports KH6EDY, the club station for the U.S. Coast Guard on Kure Island, was very active in the 1960-80's. A lot of contacts were never requested for a QSL confirmation. Presently, KH6BZF, Lee, is the QSL Manager for KH6EDY. Lee still has those logs and KH6EDY QSLs. In order to wrap up Kure Island matters, please check your station logs and submit valid contacts to KH6BZF (via CBA) with either an SASE or SAE + IRCs or SAE and one green stamp for overseas DX stations.

HB0, LIECHTENSTEIN. Opeartors DL1AZZ, DL1AQU, DL3ARK, DL3ASK, DL4AMK and DG0OGM will be active from Triesenberg, August 24-31th. They plan to be active on 160-10 meters (CW/SSB/FM) signing HB0/homecall. Look for HB0/DL1AZZ on 6 meters and HB0/DG0OGM on 144/432 MHz and the satellites. QSL via homecalls or via the DARC bureau.

J2, DJIBOUTI. Jean Claude, J28JA, has been active lately on 160 meters. Look for him between 0100-0200z around 1830-1835 kHz. Jean Claude is presently using a bit over 100 watts into a 80 meter deltaloop. QSL via F5PWH direct or via bureau.

JW, SVALBARD. YL operator Unni, will once again be active as JW6RHA. There were very little details provided on this operation. Unni will be active on August 2nd and you should look for her around 14248 kHz.

KL0, KALGIN ISLAND (Alaska). AB5EA, AB5EB and KB5SKN will activate NA-158, located in the Cook Inlet Group on Friday, August 2nd, at approximately 2000z. The operation will go until 2300z on Saturday, August 3rd. The operators will sign /KL0 and the operation will be on both SSB and CW. They will be using an ICOM 706 barefoot with a R7 vertical. QSL via their home calls.

NEW ADDRESS (CY0AA operation for the 2m/6m QSLS). Mike, VE9AA, reports his new address is: Michael E. Smith, 271 Smith Rd. (Geary), Waterville, Sunbury Co., N.B. Canada E2V 3V6 (The older address "131 Smith Rd" should do for a little while.) ADDED NOTE: Check out the CY0AA WEB at URL: http://www.cam.org/~dino/sable.html

OX, GREENLAND. The International Police Radio Club (IPARC), Danish branch, will be active from Nuuk, from October 28th until November 11th. The group will be active mostly on 160-10 meters CW signing as OX3IPA. They also plan to be an entry in IPA-Contest (November 2-3rd) and they request NOT to work them in the contest unless you are a IPA-member. QSL via OZ5AAH with SASE ONLY.

QSL HELP? Use the World-Wide WEB to found QSL routes. Try the following URLs:
http://www.systemtechnik.tu-ilmenau.de/ham/qsldb_gate.html

http://www.systemtechnik.tu-ilmenau.de/ham/hamqsl.html
http://www-dx.deis.unibo.it/htlzh/
http://www.buck.com/cgi-bin/do_hamcall
http://promet12.cineca.it/htlzh/search.html
http://www.qrz.com/cgi-bin/webcall
http://buck.com/cgi-bin/do_hamcall

QSL UPDATES AND CHANGES.... Bob, A93GD, reports his QSL Manager's address has a change in it. QSL to: William De Laga, K1SE, P.O. BOX 685, Manassas Park, Virginia 20113-0685. The ZIP code has been changed. The U.S. POSTAL authorities will accept mail to the old ZIP for a while, but eventually all mail with the old ZIP will not be delivered..... QSLs for this past weekend's ZX7XX operation from Itamaraca Island (SA-046) go direct to Jemesson Faria, Rua Professor, Antonio Coelho 139/302, Recife-PE, CEP 50740-020 Brazil..... OH2KMG and OH2KMF, who were active from the Alands (OH0) as OH0KMG abd OH0KMF during the IOTA Contest this past weekend, can be QSLed to their CBA....

SV9, CRETE. Laci, HA0HW, will be here starting the 5th August until the 19th August as SV9/HA0HW/p. He plans to use wires and vertical antennas with 100 watts from his FT-840. Laci will be on the WARC bands mainly, but also look for him on 40/20 meters CW/SSB. QSLs via CBA.

US, UKRAINE. Igor, UR5BBN, is planning a DXpedition for early September to Lisonia. Lisonia is the name of a mountain near his town and has great historical importance for his people and country. On this mountain in 1916, the Ukranian army fought a hard battle for the independance and freedom of their country. An expedition/portable operation will be held there from September 6-9th, on all HF bands and modes. Look for US80BL (Ukraine Sovereign, 80 years of battles for independence and freedom, Berezhany, Lysonia). Special QSL will be available. Please send 3 IRC and QSL to: Radioexpedition LYSONIA-96, PO Box 12, Berezhany, Ternopilska Oblast, 283150, Ukraine Republic.

VK0WH, MACQUARIE ISLAND (Update). Warren, VK0WH, reports that he has been QRT for the last month, so the 10 meter station that was active was a PIRATE. Warren states he has finished his tower work and will be active again looking for U.S. stations on Tuesdays (starting this week), from 1030z on 7009 CW, and Europe on Sundays, from 0500z until the end of August. After August, Warren will have to curtail his radio activities a bit due to work. He expects to go QRT at the end of October, but the good news is (or rumored) that his replacement has an amateur call. So VK0-land may still be active next year.

WEBSITES FOR DXERS......
The "NG3K Amateur Radio Contest/DX Page" is at URL:
http://cpcug.org:80/user/wfeidt/

Are you puzzled over a 4M prefix? Or a 6D? Need Latitude/Longitude for Somalia? What zone is Afghanistan in (ITU and CQ zones)?? For these answers and more (DXCC List) go to URL (which is part of the "NG3K Amateur Radio Contest/DX Page"):

http://cpcug.org:80/user/wfeidt/Dxcc/dxcc.html

Since there are quite a number of reflectors, also known as Amateur
Radio Related Mailing Lists, here is a WEBsite which will show you
how to subscribe to them. The URL is:
http://www.cam.org/~dino/hamlists.html

Walt, G3NYY, reports another very good DX/Contest home page is:
http://www.contesting.com/

W5 DX/CONTEST BASH. Bryan, W5KFT, reports there is an open invitation
to all DXers, Contesters, and VHFers to attend the SIXTH Annual W5 DX
BASH on October 5-6th. The BASH is a GREAT social time, just like
Dayton or Visalia, to meet and greet other DXers, Contesters, and
serious VHF operators. Details on the BASH are can be found on their
WEB page at: http://www.applink.net/tejas/w5bash.html
Check the WEB page for updates and other information including
pictures of ops, stations, and other goodies.

Ignition isn't the only place you need to be concerned these days. You must now also be concerned with things like airbag controls and anti-lock brakes.
>

I recently installed, temporarily, a 100 watt Spectra in a '95 Saturn SL2. I put the radio portion under the passengers seat. It did require that I remove the wire which allowed the adjustment of the seat position. The wires were run directly to the battery. Saturn provided a handy place. The have an underhood fusebox next to the battery where a heavy wire attaches via a 6 guage wire. It was a cinch to hook up there. I routed the controlhead cables up under the center console, which allowed me to pull out one of the little boxes when I wanted to operate. Again, since this was a temporary installation, I did not look for a place to permanently mount the control head. There aren't many!

The Airbag control box is under the center console cover.

With a 100 watt transmitter, I put the antenna on top of the vehicle to minimize any rf getting back into the pasenger compartment.

I did have trouble with sparkplug impulse noise. If this were a permanent installation, I would have probably spent some time minimizing this too.

Anyway, no troubles were encountered in our 3000 miles of driving. Didn't even set off the airbags! No anti-lock brakes to worry about in our Saturn.

From: Steve Wolf <no8m@apk.net>
Message-ID: <31FBEBB7.6D6@apk.net>
Source record: 220128

> An interface between the radio and 200lx could be something small like
> the bay-com board. Any hints or suggestions out there?

Hi Dick ...

I played around with a Baycom on my 100LX for a time and it worked
well. I reworked the circuit so that an external 9 volt battery was used
to power the thing. Fun, small and cheap but the software was a pain.

I went to Paccom out of Florida and bought one of their little
TNCs ... about the size of a pack of cigarettes. That gave me a full
function TNC with KISS, an on board BBS, etc. Works better.

For software, I uses a terminal program called MSYST that comes
with the distribution of MSYS. It is small (21k) and does everything
that I need. On a RAM card I have a full MSYS BBS that has K-nodes,
network nodes, conference and everything else you might want.
Works excellent. Requires a person who has an understanding of a
PC and is willing to read the manual, though.

MSYS is at coffman.csuohio.edu if you have a shell account.
Netscape users need to get it off of another site as an FTP doesn't
work.

Jim, while I agree with everything else you said, I have to differ with you on the above paragraph. When I was first licensed (at 10 WPM) I dove into CW in a big way. At that time (mid 1970's) we had to operate CW for a year before writing the "advanced" exam with its 15 WPM code test. By the time the year had passed I was cruising at close to 30 WPM. Having to slow down to 15 WPM for the test (we had to supply 100% accurate hardcopy) and write it down was damned near impossible (for me).

If you plan to progress through the licensing ranks you cannot afford to lose (or not learn) the ability to copy on paper. Of course, once you pass the Extra (or equivelent in your country), by all means throw away the pencil and paper! (In my younger days I could carry on a 30 WPM conversation while chatting with a couple of people in the room. Boy do I miss *that* skill :-)

--lyndon (22 WPM in contests, *much* less in real life these days :-)

Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $300/BO. Must sell ASAP, make an offer. Either reply via e-mail, or call 415-939-1037 anytime. Thanks

Evan

I have a seen this happen in either an AEA PK-80 or a Paccomm TNC-200 (an exact TNC-2 clone). Forgot which it was. One had shorting 0.1 uF bypass caps, the other had the tantalum cap in the BBRAM circuit installed backwards.

After replacing 5 or 6 bypass caps, some with DC resistance as low as 50 ohms, the TNC was working again but pulling about 1A of current (it wasn't CMOS). I wasn't much in the mood to replace 40 bypass caps at the time.

Matt,

No special requirments to operate in Canada on 2M there are some frequency limitations on 70cm but 2M is just about the same. Bring a copy of your license. People tend to use their US call with "portable VE7 for B.C. etc but that is not required just a courtesy. I go North regularly the Canadians are a friendly bunch.

>How hard is it to get at the Explorer fuel pump?

The fuel pump is inside the gas tank.....it is attached to the fuel guage sender. These pumps can be noisey but I have not seen one cause electrical interference. After all sitting inside a gas tank they are sheilded fairly well.

I would be careful of fooling with the wiring to the pump. I have been told that they are connected to the EEC and if the computer picks up anything odd it will shut down the pump.

most computers are located near the front left of the passenger compartment. locate the radio(s) on the
right side if the car, as far back from the dash as you can.

if possible, depending on your radio remote mount it. I have a knwd 741 and an icom 706, with the
main rf unit mounted to the rear deck in the trunk.

also make sure that the radio is grounded to the frame of the car, not the ground wire off the battery.

BTW, if you look at the grand am make sure its not the quad 4. they've had major MAJOR problems
with the head gasket. I had an 89 that went through 6 head gaskets and Pontiac said it was my
problem cause "I DROVE THE CAR TO MUCH!!!!!".

I'd go with the Saturn myself

6373. Wires for longwires

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-28 00:00:00 UTC
From: algol@globalnet.uk
Message-ID: <4tfhmk$ngg@news-feed2.globalnet.co.uk>
Source record: 220146

At present my antenna consists of around 50 feet of quite thin copper wire, salvaged from an old transformer. This longwire is folded around (due to constraints of space) but seems to perform fairly well with my Yaesu FRG-880.
I was wondering if anyone out there could tell me wether there is any advantage to be gained by using the very much thicker stranded copper wire which is usually supplied with antenna kits. Also, will the fact that it is bent aroud over its length affect it's performance over one which is in a straight line..
Any comments would be much appreciated.

Many thanks.

John.

6374. Antique Military Radio Equipment -- Prices/History?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-28 00:00:00 UTC
From: Sylvia Gengenbach <gngnbach@win.bright.net>
Message-ID: <4tglkb$it4@bucky.win.bright.net>
Source record: 220147
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I have recently acquired several pieces of military radio equipment and was curious as to what the prices of such items might be and as to whether or not there is a decent market. All pieces listed below are in full working order as many are "new" and have just recently been opened from their original air-sealed packaging. All accessories and spares are listed with their corresponding items. At the end of each listing I have put the date the military released them in parentheses. I would greatly appreciate it if someone could give me feedback as to how much I could fetch for each item. Thank you.

1. US Signal Corps Motorola Transmitter/Receiver Model #FSTR-140 BR (MW) 2-A 25-50 mc 60W. RF output. W/manual, box of "new" spare parts (tubes, etc.). This model was just recently opened as I had to install the tubes, transformer, and attach all wires. It runs on 20 Amps and stands approx. 6 feet tall. (1950)

2. Motorola Remote Control Console Model #PA-8270-M for use with model listed above. (1950)

3. US Army Signal Corps Jeep Raio Receiver/Transmitter Model #BC-654 Serial #7405 (1952)

4. US Signal Corps Frequency Meter Model #BC-221-AH 125 to 25,000 KC (w/transformer) (1952)

5. US Navy Aircraft Transmitter (Dynamotor) Model #T-19/ARC-5 (Mar. 1950)

6. US Navy Aircraft Receiver (Dynamotor) Model #R-26/ARC-5 (Mar. 1950)

7. US Army Frequency Meter Model #BC-221-N W/spare parts (tubes, crystals) Also includes original headphones, extra earplugs, original carrying strap, etc. (1954)

Thank you if you are able to give me feedback. Also if anyone can give me additional history on these items I would appreciate that also.

Don't have a phone number but information probably has one
try 800 info first. He sells the software to decode the wefax as
well as the modem and the radio. If I remember correctly he
uses the Segan recievers. I used the software with an ICom
735 that I had on our Tayana 37 until we sold it. The boat I mean.
The radio is sitting on a closet shelf. One of these days I'll get
around to learning the code and get a ticket.

Hope this helps

SB DX @ WW $OPDX.264.1
Ohio/Penn DX Bulletin No. 264.1 (Correction)

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 264.1 (Correction)
BID: $OPDX.264.1
July 29, 1996
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

The information in OPDX.264, under "A3, TONGA", has been reported to be INCORRECT. Thanks to Bob, W7TSQ, QSL Manager for Paul, KK6H, for the correct information. Bob, who talked to Paul on the phone (in California, Sunday evening, July 28th at 2050 PDST), states Paul does not know W4FOA. He also mentioned Paul's flight to A3-land doesn't leave from SFO until 1500 PDST on Monday the 29th. (Which means Paul should be on the island by the time you read this.

Apparently, the information reported in OPDX.263 is still correct (Listed down below.), but the information reported to OPDX and printed in OPDX.264 was confused with another operation.

At present, Paul still has no plans for 160 meters operation, but if he changes his mind he will let his QSL Manager know and an announcement will be made.

ADDED NOTE FROM W7TSQ: "I should like to remind all, A35CT will be leaving A3 permanently, about the 5th of August and returning to the states. Since I am not privy to his planning at present, I can only say, if you have had a QSO with Craig and need a card, hold off until a good address is available. Craig has been handling the A3 bureau, using his own funds to respond, and I have no idea if any one will take over that function. So if a card is desired from an "A3", you best have a good direct, or foreign bureau, i.e. callsign address before sending anything wherein you want a response.
I will be handling Paul's QSL's, KK6H and A35RK as well as other calls he MAY acquire, but as said before, a SASE or SAE plus postage is required FOR DIRECT response, postcards are answered via bureau. Bureau cards will be answered, if they get TO ME !!!! The A3 bureau will not get to me. The W7 buro knows and the W6 buro will send all cards addressed to KK6H to me also. Good DXing.... Bob, QSL manager for A35RK and others. I can be reached by call book address - good for many years or at w7tsq@aol.com"

Well, I *am* a rocket scientist, and it seems to me that a $199.95 GPS receiver will solve all your ZZZ problems, without having to reengineer a 1 GHz TACAN/DME setup onto the 2 meter band. Also, remember that TACAN/DME gives you *slant range*; you could still miss your exit if your modified VORTAC station was on a hill :-)

>Cut diode D12.

Nope, not this one. It's for reverse battery protection.

The HTX will not allow an out-of-band frequency to be stored in memory permanently. Yes, you can store said freqs. temporarily, but they vanish as soon as you cycle power or select another programmed memory channel and return. The software will also hold the MUTE line active to prevent audio from reaching the speaker. (Note that the s-meter will show activity but no audio in the speaker.) You can convert the radio to non-software squelch but that won't help due to the erase condition mentioned above.

Squelch control originates from pin 14 of IC2 then goes to the micro as the BUSY signal (pin 14 of CON2). The micro then sends a MUTE signal (pin 12 of CON1) that turns on Q13 which then turns on Q14,Q15 to route the audio to ground.

The only hope is if there is a resistor or diode connected to the microprocessor that, when removed, allows the software to store (and keep) the freqs. in memory. I don't see anything on my schematic that indicates such a possibility.

I think the legal guys at Tandy misread the federal laws with respect to amateur radio equipment receiving out-of-band frequencies. They changed their minds as you will see in the newer 2-meter radio from the Shack.

>done will come by and get a taste of one of the most enjoyable aspects
>of amateur radio.

For what it's worth, the administrator of the DX mailing list is also 100%
behind the creation of this group. As a past subscriber to the
Boatanchors mailing list I can relate to the feeling of pride that
people feel in their olde firebottle gear. (Yes, I dropped off the
mailing list, but that's simply due to the volume of e-mail I have
to deal with. Now that I have procmail taking care of much of my
incoming e-mail I will be firing off a cheque and subscription request
very soon.)

I missed the original "discussion" over the boatanchors name
controversy. I too find it hard to believe that there would be
any possible contention over the name. While there will always
be overlap in "slang" terms within any technical community, we've
never had any problems recognizing the use of those terms
within the context of a particular discussion. (How many pot
smokers hang out in the info.grass newsgroups? Oops, never mind :-)
The hierarchical naming convention used for newsgroup names should
make it very obvious what the context of "boatanchors" is in
the proposed newsgroup. Then again, with the plethora of topband
hacks who I expect to populate the proposed group, any overlap with
the audio tube freak newsgroups would likely be a bonus :-)

Much of the confusion over the appropriate use of newsgroups (and
mailing lists) can easily be addressed by the regular posting of
a newsgroup FAQ describing the intent of the newsgroup. If such a
FAQ was to be posted on a bi-weekly basis we should be able to
avoid any confusion over the intended charter of the boatanchors
group. Since I already to this for other newsgroups I would be pleased
to offer that service from ve7tcp.ampr.org. (Somebody else gets to write
the FAQ, though.)

Finally, I think the rec.radio.amateur.dx newsgroup sets a valid precedent
for creation of the boatanchors group. Traffic on the DX list (with 1500
subscribers) had increased to the point where the S/N ratio made the
list painful to deal with. Many people wanted to just chat about DX
related topics, whereas the core subscriber group wanted to see hardcore

DX related traffic *only* (Dxpedition announcements, spots of rare DX stations, etc.). The boatanchors list was experiencing similar problems even before I fell off the list. Providing both types of forums (chat and hardcore) only serves to help in the spread of information. Without them, people just get hacked off at all the traffic on the mailing list and unsubscribe. The downside is that the people unsubscribing are usually the people who have the most valuable contributions to make.

Let's make it happen! When the vote call comes in I will be there 100%

--lyndon VE7TCP/VE6BBM

Administrator of the Internet DX mailing list, and proud owner
of the following boatanchors:

* FTdx560
* Drake C-line twins (production HF rig at VE7TCP)
* Tentec Century 21 (the first solid state boatanchor :-)

okay, qusetion. On the novice test, for the cw part I know its 5wpm, but I've heard some talk about fansworth. I have a program to help me out called NuMorse. its been a great help so far, but I'm a little confused on the speed settings. if I put it on fansworth, then the letters come up at 13 wpm, with a long delay between letters. Is this how it'll be on the test, or will it be 5wpm with a shoter delay? I'm using the fansworth right now because of suggestions I've read about learning the sounds, not counting dit's and da's...I have problems copying when I slow it down, and dont want to learn it at 13 with a long delay if I need to take the test at 5 wpm with a short delay. Thanks for any help.

Here in the US we have a license class called Technician. There are two
types of Technician, coded and no-code.

James said he has been a Technician for several years and he signs a call, N9ONL.

So I guess that he did say he is a licensed amateur.....

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 29/2330Z JULY 1996 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 29 JULY AND FORECAST FOR 30 JULY - 01 AUGUST

1A. SOLAR SUMMARY
Activity: NA

Flares: NA

Observed 10.7 cm flux/Equivalent Sunspot Number : NA

GOES satellite data for 28 Jul
Daily Proton Fluence >1 MeV: 7.4E+05
Daily Proton Fluence >10 MeV: 1.8E+04
Daily Electron Fluence >2 MeV: 7.0E+05 (normal)
X-ray background: A6.4
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
30 Jul 31 Jul 01 Aug
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 30 Jul: NA

PLEASE NOTE: at the time of issue, observed solar data was
unavailable.

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: Quiet

Estimated Indices : A K Observed A Index 28 Jul
Learmonth 4 2222 1101
Fredericksburg NA NA
Planetary NA NA

Observed Kp for 28 Jul: 1111 2442

2B. MAGNETIC FORECAST
Date Ap Conditions
30 Jul 8 Quiet
31 Jul 8 Quiet
01 Aug 8 Quiet

PLEASE NOTE: at the time of issue, Fredericksburg and Planetary
geomagnetic data was unavailable.

3A. GLOBAL HF PROPAGATION SUMMARY
Latitude Band
Date Low Middle High
29 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
30 Jul Normal Normal Fair
31 Jul Normal Normal Fair
01 Aug Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
29 Jul 21

Observed Australian Regional MUFs:
Darwin: near predicted monthly values.
Townsville, Sydney, Hobart: near predicted monthly
values during local day and 30-70% enhanced during
local night. Night-time Spread F at Hobart.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
30 Jul 15 Mostly near predicted monthly values, with 20-40%
enhancements during local night at low and mid
lats.
31 Jul 10 Near predicted monthly values.
01 Aug 10 Near predicted monthly values.

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.
For more details, or to obtain a free demonstration copy, please
contact IPS.

From: Rick Horwitz <rick@rhphoto.com>
Message-ID: <31FEF622.4DE8@rhphoto.com>
Source record: 220074

Ford has a technical service bulletin regarding the fuel pump noise
on the Explorers and Rangers. You would think that the fuel pump would
be well sheilded but the gas tank is plastic. Ford installs a RFI
reduction kit at the fuel pump which in my case eliminated about 80% of
the problem. I now have no noise on some bands and slight noise on
others. VHF/UHF are not affected in my vehicle only HF.
Good Luck,
Rick Horwitz

> -Drew in Sunny Central Florida-
> KF4DDM

According to FCC rules, a repeater owner/operator can prohibit anybody they want from using his/her equipment. You don't have to give a reason and you have the rules to back you up. They don't want the jammer on their repeater, period. They have the right to do that and if the individual ignores their lawyer's letter and FCC does nothing to back up their rule, then bringing a civil suit is the only recourse.

Another thing, in this country you have the freedom to do anything you please as long as it does not interfere with others pursuit of freedom and happiness or violate other laws. If this clown is preventing this repeater group from using their repeater, he can be successfully prosecuted on these grounds, as others have.

Steve

6406. Re: QSL Practices and card quality?

Message-ID: <4tii1m$cia@nervous.pdb.sni.de>
Source record: 220077

In <jlowmanDuvCGL.BKr@netcom.com> jlowman@netcom.com (Jim Lowman) writes:

>I was first licensed in 1966, but have not been active on HF, other than
> ..

I was licenced in 1969.

Before I start to answere your questions and tell you my opinion I should
say that I am a German.

First at all: 99.9% of my cards I am sending/receiving via our buro.
Only 0.1% of my cards I am sending direct. My response quote via buro
is ca. 30-40% and via direct the quote is nearly 90%. I am running a list
about every card, which I have sent direct! :->)

>1) Do you send your own QSL card, in response to an "unsolicited" card
> arriving in your mailbox?

I am QSL-ing each "unsolicited" card, if the QSO is in my log. If I have
received the card via direct and the requesting HAM has not provided any
form of return postage to cover the full expence then I don't QSL direct!
I am not the owner of an oil-well. Then I am QSL-ing via buro in return.

>2) Do you send your card in an envelope?

Only for rare DX or very rare IOTA I am sending via direct and then I use
an envelope, providing a SAE and some form of return postage: US-Dollar(s)
or IRC(s).

BTW: The last weekend I have received my TI9X card; only parts of it in a funny
plastic bag! The envelope (my SAE) and the TI9X card inside was damaged
by the US postal service (stamped with: "Damaged by US postal service").
Approx. 6 US-Dollar (postage, return postage and a little donation for
the DX-pedition) are blown into the wind .. :-(((

>3) ...with a SASE or "green stamp" enclosed?

Mostly US-Dollar(s). In some countries it's forbidden to receive any foreign
currency via airmail envelopes (i.e. India).

>4) Do you QSL 100%, under some circumstances, or not at all?

Usually I QSL every first QSO. If the other HAM don't want a QSL then I don't.

>5) Do you believe that all pertinent info should be printed/written on the
>*front* of the card?

Allmost all QSL-managers are more happy with "one sided card".

Good luck with QSL-ing

LAMBDA AMATEUR RADIO CLUB ANNOUNCES
NEW PUBLIC MAILING LIST -- LARC@seta.fi

==========

The Lambda Amateur Radio Club (LARC) announces a public mailing list for gay/lesbian/bisexual/transgendered ham radio operators, persons interested in amateur ("ham") radio and shortwave listening, computer enthusiasts and their friends and supporters.

The mailing list is moderated and a wide variety of subjects of interest to gay people everywhere are discussed, as well as technical topics related to radio and computer operation.

TO SUBSCRIBE:
Send an E-Mail to: majordomo@seta.fi
Leave the "Subject:" line of the message blank.
Message text must be:

subscribe larc your_name [call] <your_email_address>

Here's an example:

subscribe larc Joe Smith WB6LYI <joesmith@net.net>

If you are a licensed ham, you can add your callsign after your name. Be sure to include the "<" and ">" before and after your E-Mail address as in the example. An acknowledgement will be sent to you automatically.

==========

FOR LARC MEMBERSHIP INFORMATION, visit our web site or request our electronic brochure by sending an E-Mail to:

LARC-INFO@seta.fi

Do not include any text in the message as the mail list software has not yet learned to read.

VISIT LARC's WEB SITES:

But routine WWII aeronautical comms were conducted via CW. Every big plane had a radioman aboard working the radio gear (at least here in the US).

>and is still used extensively today, on voice,

Not in today's military nor commercial aero comms here in the US.

>For instance, if a pilot asks air traffic for the airfields QFE he is
>asking for the pressure setting that will enable his altimeter to read
>zero when on the runway, whether it is calibrated in feet, meters or
>venusian thargs.

Air traffic controllers provide the baro pressure without the pilot having to ask for it. Back in the days when aero comms were in code, that Q-sig would have been used *on CW*.

If you're speaking for the UK you should say so.

If you use the Q-sigs on voice you first should ascertain whether the the other op has full knowledge of the list. If you ask "Hey Bill, QTR?" and he answers "Huh?", then there was no advantage in using a Q-signal. A more concise exchange would have resulted in just asking "Hey Bill, what time is it?"

Well, Grover titled his post "Gate 4"... but his question concerned Gate 2.
In Gate 4, you are correct... but Gate 2 is only open to extras. Plus Gates 1
and 1A will remain open for those who qualify for that. I don't know which
answer Grover was really looking for.

Don't take an unsealed lead-acid battery on an aircraft! It could be the last
flight that you or other occupants of the plane ever take. Potential problems:
1) Spillage of highly corrosive sulphuric acid, damaging the aircraft;
2) In case of an accident which ruptured the battery case, the acid could be
splattered around the cabin;
3) Lead-acid batteries vent flammable hydrogen gas. Yes, I know that this is
normally only when they are re-charging, but some hydrogen could be retained

inside the case, and vent while in flight, especially considering low cabin pressurization levels.

I know that there are strict rules regarding shipping lead-acid batteries on aircraft (I work in the transportation industry.) I don't know for certain, but I strongly suspect that similar rules are published for transportation of carry-on items. Contact the local FAA or NTSB office for details.

I also suspect that while somewhat safer, gel-cells are likely subject to the same regulations and warnings.

Remember that until evidence proves otherwise, the liklihood that TWA 800 was brought down by an unsafe shipment is just as high as a that of a bomb or missile.

RF sensitivity is nothing new. The old 70s VW Squareback ("Type III") with the analog Bosch fuel ignition would die if you keyed up a 50w 6m TX from the next vehicle. I had a 71 Ford Falcon wagon, then a 69 Rambler, then a 71 Volvo, with the same 6m 60w Motorola Motrac in all them (along with a 2m 90w). Friends wouldn't believe me when I told them about the Bosch design. I'd pull up alongside the VW, flip the channel selector on the control head from the local repeater to 52.525, key down, and the VW engine would die.

As far as mounting, I agree with the remote kits (nice to see Kenwood & Icom copying what Motorola has done since the late 50s). I'd go one step further:

do everything you can to mount the heads out of sight from theives who "window shop" in parking lots; i.e. mount the head so it and the mic can not be seen through a window. Then have a foot of RG58 with a BNC on it in the glove box, that you can pull out when needed and tuck the cable end in the seat fold. Obviously a handheld that the guy took with him, right? A friend has a Kenwoof 741 on 2m/220/440 with both 2m & 440 on the same 2m whip (can be done with careful tuning), and 220 on a seperate spike (both Moto NMO series chrome nut whips). The control head is fastened to the back top of the drivers sun visor, and the mic hides in the console arm rest. He uses the RG58 trick, doubled. Twice adjcent cars in parking lots have been robbed.

He also has a Stico disguise AM/FM/2m antenna on the fender that he uses for the broadcast radio and a 2m HT, for real.

>BTW, if you look at the grand am make sure its not the quad 4. they've had>major MAJOR problems>with the head gasket. I had an 89 that went through 6 head gaskets and Pontiac>said it was my >problem cause "I DROVE THE CAR TO MUCH!!!!!".

What are you supposed to do with a car? Park it on the front lawn and make a planter out of it? That kind of comment and "service" you want to document with the idiots name, the date, his phone number, etc. put it in writing and report to the zone office, with a copy to the BBB and the chief editor of the local paper...

My father had a '66 Corvair van that went through 8 head gaskets in the first 12 months (for those that have never seen a Corvair, it had a flat 6 with seperate cylinder barrels and heads for each cylnder - think of a GM variant on a Porsche flat 6, or a Continental O-series aircraft engine). The GM zone office finally loaned my dad a car, _took_the_Corvair_ to_a_Porsche_dealer_ and had them teach the GM mechanics how to do a head gasket on an air cooled engine. It worked fine after that - he drove it fora couple of years and bought a Dodge van, then put 190k on the first of 3 engines.

>
> First, I'd like to thank all of the folks who replied to my "Learning
> CW-Any Pointers?" post. The code is coming a lot easier now.

How many times do I have to read messages from hams that send a
"Thank You" addressed to ALL. When one seeks help and
someone takes the time to respond, the least the receiver of
help can do is send a simple individual reply for thanks. After
all-the respondents to this call for help responded one by one.
I have received up to 75 messages in a call for help and sent
individual thanks to each. It was very time consuming, but it
was the right thing to do.

Would you at your wedding, if you were the groom, get up at the
end of the reception and yell out, "Gee, Thanks everyone for the
gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to
respond to someone who H E L P E D you.

A VORTAC station is a VOR operating at about 110 MHz and
a TACAN station operating at about 1100 MHz. The distance measuring
portion is the TACAN and won't go into the 2 meter band.

Bill

(much ranting that is deleted for brevity)
: starts again. Hell if it go bad just buy a new one there cheep .People
: do not keep things long, whats new is in and that seems to be the
: reason that we are so screwed up. The thought of having a radio that

Let me see if I've got this. We (whoever the collective is referring to) are screwed up because hi-tech, leading edge technology is cheap enough to buy new on a regular basis. Uh-huh...

: is 20 years old, are you out of your mind. Hell just buy a new one and
: keep yourself in debt.The radio gear may have been big, heavy and old.
: But it did last years and was a lot more fun. For the most part

But I thought we just established that they were cheap. It follows then that debt should NOT be a requirment.

Then along comes this reference to fun. Now I'm beginning to understand.

"Back then" you had leading edge technology, that you had to build because nobody else did, and it would have been ruinously expensive to buy even if they did. And it was "a lot more fun" because there weren't legions of bitter aging old men on the air whining about how things used to be.

I have just recently become involved in this pastime, and I've got to say that your view is all to common, and because of it, I am embarassed for you.

Hams lay claim to vast areas of the spectrum. The equipment on the market today is cheap, reliable, and offers a staggering array of performance and features. And STILL you can't seem to attract enough interest from prospective new users to fend off attacks on the spectrum you own. Witness the recent shots at 2m and 70cm by the commercial lobby. We still hear, years later, bitching about the no-code technician class, a move that breathed more life into amateur radio than anything in the last couple of decades.

Get OVER it! Find ways to solve problems or watch as people who WILL use your parts of the spectrum take them away from you.

Fee (fee@bbs.cowland.com) wrote:
: okay, qusetion. On the novice test, for the cw part I know its 5wpm, but
: I've heard some talk about fansworth. I have a program to help me out

I hope the following helps out. The tapes that I have heard used for
novice test are at either 15WPM or 18WPM character speed, with long
spaces in between the characters to get down to 5 or 13 or whatever.
I have sucessfully passed all the writtens up through 4A and sucessfully
failed both the 5 and 13 WPM test,(so I know what it sounds like even if I
don't know what was said) but will keep praticing and testing until I
get it. I do have wonder why anyone goes for Novice anymore, there's only
another 25 questions to get to Tech+, but since the written is easier for
me I'm probably a bit biased.

If you know where you are going to take the test give one of the VE's a
call and see which rate they use. They don't try and hide anything from
you and might even give you some pointers that would help. As sort of a
fail safe you could go with the 18WPM character rate and then if the test
is at 15 it will seem slow:) I believe the 15 WPM rate is referred to as
"W5YI Farnsworth", while the 18 WPM is usually called "ARRL Farnsworth".

-best of luck,

>most computers are located near the front left of the passenger compartment. locate the radio(s) on the
>right side if the car, as far back from the dash as you can.

Some are mounted in the passenger side kick panel, however, so beware.
Buy the shop manual, learn where things are before you start drilling
holes.

>if possible, depending on your radio remote mount it. I have a knwd 741 and an icom 706, with the
>main rf unit mounted to the rear deck in the trunk.

This *may* help. But you might have problems with the separation
cable becoming "hot" for RF. You may need to wrap some turns through
a toroid to suppress this.

>also make sure that the radio is grounded to the frame of the car, not the ground wire off the battery.

Do *both*. The direct wire from the battery shorts out the ground loops
through the body. Otherwise you may suffer all sorts of electrical
problems. In some of today's radios, the negative power connection and
the radio chassis are commoned only at the coax output connector. So
if you depend on chassis ground for power, you'll let all those nasty
transients ground looping through the body pass through your radio.
By running the radio negative wire direct to battery (through a fuse),
you'll avoid most of that.

Gary

Schmitt is a tad incorrect stating that appending the appropriate
Canadian callsign district to the US callsign while operating in Canada
is a courtesy. In accordance with subsection 57(2) of the General Radio
Regulations, Part II, it is mandatory to append the Canadian prefix.

There are a few advantages/disadvantages to getting an HT. First, the range isn't great. My club's repeater is just below a hill (working on the political aspect of moving it), and there's just not enough power to get in. I do prefer an HT because of it's portability. Especially if you go to a lot of hamfests. Generally, there are plenty of repeaters around, so you won't have any problems going any bit of a distance.

As for brands of radios, I've stuck with Alinco and Kenwood. I've had two Alincos--the DJ-F1, and the DJ-180. They're really rugged, and fair priced, but they tend not to have a lot of features. They both have had a very simple user interface.

The Kenwood...which I push more for...is a much better rig--usually smaller and lots of bells and whistles. I've had a TH-78A and now have a TH-79AD. Of course, all of this does cost a little more. The 78 was a much better rig, so if you can get your hands on one of those, all the more power to you. Mine disappeared last september, so that's why I had to get the 79.

Our radio club, KB1BRH has an HTX-404 (the Radio Shack), and just purchased two Alinco DJ-582Ts. I can't stand using the HTX-404. The interface is very difficult to remeber, and the features just aren't there. The Alincos are very straight forward, but don't pack in some of the features that Kenwood has.

I have heard of many hams having problems with Icoms, but I'm not sure of the causes. Yaesu's are pretty good, but I haven't had much experience with them. (Our club advisor has a Yaesu FT-5100, which seems to be a great mobile rig.)

I hope this helps!

Some commercial equipment has channels that you can program frequencies into. If that is the case, you could change your channel number and the radio changes the frequency automatically, yet still displays a channel number. In a case like that, he is not necessarily wrong.

Hahahahahahaha. I like that one.

I haven't heard any one localy discussing consipracy theories, militia
crap, or anything remotely related to that on ANY of the VHF-UHF
repeater/simplex frequencies that I monitor.

As close as it gets, is a silly discussion about Chupa-cobras, and
UFO's.. With the exception of some Liberal guy on the 146.94 machine.

This Ross guy either needs to get a life, or a freq counter, or both.

I know this is dumb as hell, but what if you just had the repeater site report your azimuth and signal strength? That would be useful in any event (especially for locating jammers). You could do this with just four (extra) antennas and a doppler scanning device.

Geeze, stay away from those VOR rigs. They can't compare to GPS in accuracy and it would be a real pain to convert one...

Several of us here have a list of frequencies, we refer to channels,
probably from someones rockbound rig of the past, but when dealing with
jammers/bootleggers it confuses them when I tell my XYL to go to
channel 7 rather than give the frequency.

Perhaps Ross got it wrong. Or perhaps the transcriber mis-heard or
mis-typed `ham radio' in place of `AM radio', which to me would make
far more sense that either ham radio or shortwave radio.

I don't wish to pick nits, but these postings take on a life of there
own so they should be made pedantically accurate. I believe that
this US-Canadian agreement only benefits the respective citizens of
these two countries and not everyone who has been licensed by them.

(See S97.5 (c)(2) for the US side. I don't have the text of the
GRR's but I believe that the Canadian wording is comparable.)

Tony,

There are many organizations that provide certifications, NARTE is just
one of them. I don't really know anything about NABER, so I can't
comment on their certification program. People need to decide on their
own which one is for them.

This thread _is_ like channel 19. Fortunately, there is some good stuff in
this newsgroup as well. You learn to ignore the garbage.

Fortunately, also, the ham bands that I use are _not_ like channel 19. And
if I come across something that is (which will occasionally happen in any
metropolitan area), I can change the frequency. The one time that I heard
it on our local repeater, I shut the repeater down.

To clarify another point, the young lady said "BYTE ME", not "BITE ME". There
is a difference, and the subtlety of her humor did not totally fall on deaf ears.

I just read the transcript from a recent Nightline report and thought I would pass on this excerpt. The program aired July 10, 1996. I believe Mr. Ross doesn't know the difference between Ham Radio and Shortwave.
Rick Horwitz

[Rick Ross]:

Well, I'd like to think, Ted, that they erred on the side of caution, because I know these groups here in Arizona, and they're very volatile, very delusional about their conspiracy theories, and it could be almost anything, Ted, that could set them off, into the idea that the government is coming against them, whether it's some type of mythology about black helicopters, or, I've even heard conspiracy theories about the U.S.S. Liberty, and the government deliberately setting that ship up for attack by Israel. One hears these conspiracy theories regularly, here in Arizona, on our ham radio stations, and I think that this has made a very volatile mix with these groups.

Nope, it's not a done deal. A vote should be coming up soon, and everybody who's the least bit interested needs to register their YES vote. I seem to remember that the rules for passing a group are at least 100 more YES votes than NO votes, so when the vote comes up we can't just "let George do it", we've all got to vote.

Hi all, I have an Icom IC-2000 for sale.
50 Watt 2 meter mobile rig with 50 memories.
You all know this rig and the drill. Asking $200 + shipping.
In new condition with box, ect, I've had it about 3 months
Must sell to help pay parents bills, father sick in hospital.
E-mail at WCOYLE@ISS.DCCC.EDU if interested.

Tnx & 73's
Bill

>sent easy.

And this is how people usually learn the "copy behind" technique.
As your symbol recognition speed increases you find you have some spare
cycles left over with which you can read what you wrote. Do this
long enough and you will find yourself divorcing the copying (i.e.
scribbling on paper, be it mechanical or linear) and comprehension
(groking the context). The trick is to get your brain working in
a multi-threaded manner where the two tasks run in parallel. Once
you've managed that, it doesn't matter if the symbols are scribbled on
paper or in short term brain RAMdisk. The trick to high speed copying
is to get the scratchpad memory into brainRAM where you are not limited by
the mechanics of your fingers and a pencil. (And in my case, completely
undecipherable handwriting.)

Just to throw a wrench into the discussion (although it is
related), how many of you folks contest using a paddle and iambic
keyer? I bet most of you run the keyer right-handed, and also scribble
notes and logging info with your right hand as well. As an experiment,
during the next contest reverse the paddles and try operating left
handed. Sound scary? It is! But, I think you will find that after
five minutes or so you won't have a problem sending "backwards."
I tried this during the 1990 WPX contest (if you're going
to try something new, dive in *big* *time* :-) and discovered
that not only could I multitask the op'ing and logging (I hadn't
discovered computer logging yet), but divorcing the two tasks
became *much* easier. Part of this was due to the elimination of
the "context switch" my right hand had to go through alternating
between the key and the pen, but I also think there were issues
related to left/right brain interaction that helped improve my
operating rate. (If I had sent in my log I would have received
a top-10 placing for my category: S/S all band low power, running

100W into a vertical).

CW is much more an art than a science. Books won't teach it to
you, and neither will the tapes. You have to play with it, and
figure out how *you* want to relate to *it*. Personally I find
CW and music to be closely related. While I like a *broad* range
of music, there are styles I despise. The same applies to CW.
There are some people out there who I simply CANNOT copy, even though
I have software that loves them.

>That's why Morse usage on the amateur bands is often extremely stylized
>and abbreviated. If all you want out of a CW QSO is to just exchange empty
>stylized formalisms with other stations, then perhaps you don't need to
>learn to copy Morse. But if you want to exchange complex ideas, or if you
>want to handle traffic, then verbatim copy is essential. Reflex copy is
>about the easiest way to obtain verbatim copy.

Sorry, but I disagree. While reflex copy leads to "dry" text, you
still "hear" the sender. Unless the code is coming from a machine
(KAM, whatever), there will always be an inflection on what's being
sent, be it in the spacing of words and characters (e.g. keyer),
or in the variable weighting of individual bits of the characters
(from a hand key). The "swing" of the sender always influences the
person copying. (Or should. If you miss that aspect of CW you really
miss out on the context of the conversation you are having.)

When I'm tuning around looking for someone to chat with I tend to pay
a lot more attention to the "style" of the operator. Very small
hesitations between words or characters (or individual symbols)
can impart a large amount of context into the conversation - much
more so than any amount of use of prosigns and the like. Hell, I've
heard more dry cynical humour in three carefully spaced "dits" than
in any amount of raving on Usenet :-)

So what's my point? (Do I even have one?) I guess what I'm saying
is that reflex copying is only a tool to get you to the point where you can
begin to appreciate the overall context of a CW conversation. And yes
there is a lot of use of abbreviations, but those, combined with a
unique sending style, can make *extremely* effective use of the
bandwidth to transmit not only content, but context.

The problem is: passing the exam.

Until you have sone this (for all levels you want to achieve) you
have to be able to hardcopy in some manner.

Once the paperwork is out of the way, learn to copy in your
head, just as you do with everyday speech. Assuming that
copying on paper to pass the exams hasn't buggered that skill
beyond hope :-(

>quickly, you will also be able to recognize it when it is slowed. But if
>you learn it slowed first, you'll have a hard time recognizing it when
>it is done quickly. This is why all the business about Farnsworth exists.
>It may not *really* be Morse, but it is the best way to *learn* Morse.

It's my mission in life to followup to Gary's postings in agreement
it seems :-)

What you say above hit on the head something I was trying to get at
in a previous followup in another thread. The *sound* of CW is
very akin to the *sound* of music. I don't think many of you could
specify the individual notes (or musical notation) for a good kickass
blues tune (let's pick Mustang Sally as an example). All of you would
recognize the overall tune, however. Now, if I was to sit down and
try to teach you how to play that song I would not concentrate on
teaching you the traditional blues scale in E. Instead, I would
show you some patterns you could invoke on the guitar neck that
would reproduce the sounds of the song. Once you had learned it
then (and only then) I might sit down and start explaining the
concept of scales, three cord progressions, etc.

If instead I sat down and tried to show you the MATH of playing the
blues, you would pick up that guitar and do severe damage to my
head with it.

Okay, analogies suck, and I'm the first to admit that. But just
before you discount my argument completely, dig out your key
and send this:

BEST BENT WIRE TREE

See you at the blues 'fest :-)

Thomas Foster <tlfoster@ix.netcom.com> writes:
>Gary, I respectfully disagree! DISTINGUISHING a dit from a dah is not
>tantamount to COUNTING dits and dahs. When I copy code at 20 WPM, I cannot
>possibly count the individual dits and dahs, either consciously or
>subconsciously, yet I must distinguish them before the character is evident.

When you copy english at the normal speach rate do you distinguish
all the phenomes before contextualizing all the words? When reading
printed text do you identify the individual letters before contextualizing
the words?

Morse is no different. Yes, when I copy (okay, used to copy) at
30 WPM I *heard* the dits and dahs, but only in the same sense that
I hear the phenomes in human speach as they blur together into that
wonderfully incoherent mess that we call the english language.

For those of you who are interested in learning a bit more about
this business of information decoding (from other than us QRO
firebottle pundits) I highly recommend:

The Language Instinct
(How the Mind Creates Language)

Steven Pinker

ISBN 0-688-12141-1

William Morrow and Co. (1994)

Pinker was one of Chomsky's notable students, although he did not
agree with his master on a number of points. This book provides a
fascinating look into language comprehension, written such that the
lay public can get a grasp on his thesis (read: even idiots like
me found it highly informative and enjoyable reading). Much of
what he talks about concerning symbol recognition and interpretation
directly pertains to copying morse.

One of the best ways to get your speed up is to get on the and
operate.

>Basically, I want to learn the code, and I want to upgrade as high as I
>can go, but I really don't want to waste my time learning and re-learning
>at different speeds. If I actually learn the code at higher speeds, how
>will it affect my comprehension at lower speeds?

As you speed up, why would you want to slow down? :-) Umm ... going
faster means that you will be able to copy at the slower speeds. The
worst that will happen is that when you get to 20 WPM you will start to
find 10 WPM being a bit boring.

>The Code has always been a sore spot with me, but I am really motivated,
>and want to learn it now. Any suggestions would be GREATLY appreciated!

Just get on the air and DO IT! Don't push your speed, just log lots
of CW QSOs. As you become more comfortable with it you will find your
speed increasing without even realizing it. If you really want to
get your rate up fast(er), find a station calling CQ at a speed that
is just a *bit* uncomfortably fast and work him/her. Losing one or two
characters in a contact won't make any difference, and will help you
bump your speed up just a little bit more.

There are no jumps, steps, whatever. It's a linear progression, and
it should only increase as fast as you are comfortable with it.

There's no magic, either. You just have to work at it. Just like
anything else you apply yourself to.

Have fun, and see you on 14.010!

A gel cell and a lead acid cell are basically the same chemistry.
the Gel cell contains gel instead of liquid, and usually costs more
per amp-hour. Of course, since battery acid is destructive and
potentially dangerous, portable equipment usually uses gel cells.
Ni-cad cells have some advantages, but usually cost more per
amp-hour than gel-cells. Nicads often have lower internal
resistance, and are easier to charge correctly (constant current vs
constant voltage.) Ni-cads self-discharge rapidly, so gel
cells are good for batteries that are often left on the shelf
for months. Nicads are probably a bit lighter than gel cells.

If you are looking for 6-amp hours, I think that gel cells will
be much cheaper, and probably the best way to go. For lower
amp-hours, I would probably choose ni-cads, as the cost difference
would not be as significant.

>like this?

Yes, it's bad form to followup to your own postings, but I have to
correct a massive error here. As someone kindly pointed out in
private email, I should have said "move it DOWN to the 2m band."
Sorry about getting the sign wrong, folks.

For those of you who are NOT rocket scientists (must be most
of you -- I only received one message :-) your typical DME station
operates in the range between 962 and 1213 MHz. Moving this down to 2m
(or 440, or wherever) requires a change to the RF decks, but the
underlying logic doesn't have to change. (And yes, I realize this
is a wee bit of a frequency jump.)

Since I expect to be the only person using the modified service I
wasn't planning on carrying along the multi-channel support. (This keeps
the whole mess inside the ham bands, among other things.)

Can we get back to having FUN now?

Some commercial equipment has channels that you can program frequencies into. If that is the case, you could change your channel number and the radio changes the frequency automatically, yet still displays a channel number. In a case like that, he is not necessarily wrong.

6465. Re: Best way to learn high-speed code?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-30 00:00:00 UTC
From: atkes@imap1.asu.edu
Message-ID: <4tk8k0$b9r@news.asu.edu>
Source record: 219955

James W. Barr (jbarr@MCS.COM) wrote:
: I have enjoyed being a Technician for several years, and am interested in
: upgrading. My problem is that I would like to "go all the way" as far as
: learning the code -- like learning the code at 20 to 25 wpm. I have
: heard that if you learn code at 5wpm, that getting past 13wpm is a real
: barrier. For higher speeds, you basically have to learn it over. Is this
: true?

I don't think this is true. I think it is a myth.

: I have also heard that a good way to learn high-speed code is to listen to
: high-speed tapes and pick out the letters you can pick out and do this
: over and over until you learn the code.

This might work, but it sounds really boring to me. Since a big
"enemy" of morse learning is that it can be very boring, I would
avoid this method.

: Basically, I want to learn the code, and I want to upgrade as high as I
: can go, but I really don't want to waste my time learning and re-learning
: at different speeds. If I actually learn the code at higher speeds, how
: will it affect my comprehension at lower speeds?

The only problem I have with slow code is that it is well slow.
When I operate at low speeds, I sometimes read
a magazine article at the same time to keep occupied. YMMV.

One of the problems with answering your question, is that the right
answer is nobody knows. There have been very few good studies of morse
code learning. One of the few things that has been tested with one
small study is whether Farnsworth spacing is helpful. The result was
that when two groups during world war two were taught, with one
using Farnsworth spacing and the other standard spacing, the two group's
performance was statistically indistinguishable (with the standard
spacing group being slightly better). However, most hams take on faith that
Farnworth will help. My own experience teaching my wife and daughter
morse was that while Farnsworth spacing may help form the character
sound better it gave them a lot of time before the next letter to
repeat in their heads -- "di-dah, di-dah, oh that's A". Standard
spacing forces you to listen to the next character while you are
deciphering the current one.

The Koch method where you learn two characters at 20 wpm and then add
one character at a time once you get below a 10 percent or so error
rate has been reported to be good, but has not been studied very well.
You might try it.

One thing that matters is whether you want to just pass the extra test, or if you want to operate high speed cw (I would say that high speed cw is around 35-40 wpm and up). If you just want to pass the extra test, then you really only need to be able to copy 18 wpm or so with about 80 percent accuracy if you are a good test taker. I would recommend a VE team that uses multiple choice tests.

If you want to learn to operate high speed cw, then I would recommend copying in your head as much as possible and as soon as possible. Get on the air. For off air practice try Tree N6TR's contest logger (there is a public domain version see http://www.qth.com/tr) which has a simple simulator which you may find more interesting than listening to code tapes. The "stations" will gladly repeat their call signs forever unlike real ops :-). Above 30 wpm, this program still sends excellent cw, unlike supermorse which sends poor cw above about 30 wpm. Morse academy sends decent cw, but not as good as Tree's program.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Jul 12

Observed Australian Regional MUFs:
Darwin: 15-30% depressed during the local day and otherwise
near predicted monthly values.
Townsville: near predicted monthly values.
Sydney, Hobart: near predicted monthly values during
local day and 30-50% enhanced during local night.
Night-time Spread F at Hobart.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
31 Jul 10 Mostly near predicted monthly values, with 10-30%
depressions during local day across northern
Australia.
01 Aug 10 Mostly near predicted monthly values, with 10-30%
depressions during local day across northern
Australia.
02 Aug 10 Mostly near predicted monthly values, with 10-30%
depressions during local day across northern
Australia.

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350. Upgrades from
DOS versions 2.0 and higher will be available for AUD50.

>sensor and the ignition switch), but that's just an output of the
>ECC.

It also used a distributor reference signal. After an allotted amount of time (after the rack is pressurized), the pump will shut down if it doesnt see that the engine is running, regardless of pressure at that point.

This is done so that in an accident that severs the fuel line, and the driver cannot, or does not turn the ignition off, the pump will stop pumping.

Rick Miller wrote:
Dear Rick,

I had the same question a few months ago and was not able to find a CB unit with selective calling capability on the market. That was surprising, since CB channels are very busy and selective calling would be really handy.

I did modify my CBs for selective calling by adding a DTMF decoder (postage stamp size, microprocessor controlled and easily programmable, I bought mine for $60 a piece from AES. It was easy to install inside the CB, and it was made to "ring" the CB speaker when the volume is all the way down when the proper sequence in received). I picked up a couple of DTMF mikes from a fleamarket and the result was selective calling! As an added bonus, these decoders can decode more than one programmed sequence. I used one sequence to "ring" and another to change the channel of the remote unit! In each case the receiving CB is made to key-up for a few seconds and send a tone to confirm proper decoding. I used this system for a few months between my mobile and base with good results. For reaching my system through a walkie talkie, I used one of these little DTMF units with the little speaker pressed against the walkie talkie mike. Not elegant, but it worked.

Only problem was range. DTMF needs about 10db signal to noise to work, so it only works when the signal is decent. Did not work on weak signal situations. That meant a reliable range of about 5-10 miles between my base and mobile. 1-2 miles between a walkie talkie and the base.

For added range I wanted to use SSB. Well, DTMF does not work with SSB. For that I got two "selective calling units" that were on sale by a fellow on the net. These units are external to my CBs, they have 100 different codes and they are wired to the CB at the speaker and the mike connections. These units send a unique time-sequence tone (on-off-on, etc.) that lasts about 17 seconds. I have used them for a month and work fine on SSB and on AM. They are a bit awkward (they are as big as a small CB radio), and the 17 second handshake is a bit long. But they work with extremely weak signals, and they also key up the receiving radio for a confirmation. Each unit serves both as a encoder and decoder. They go for about $100 a piece. I use them to "beep" my wife home and start the conversation. After that we put them back on the standby mode and the CB is quiet until another call comes in.

I have not tried CTCSS because I believe that AM signals are filtered against low frequencies and they would not pass these tones on.
I am also pretty certain that, like DTMF, CTCSS does not work on SSB.

After this experiment I am certain that selective calling on CB will
be EXTREMELY useful for those of us who want to use CB to talk to
specific people without having to listen to all the chatter. I certainly
hope that the manufacturers start including this feature in their
radios.

Must Sell ASAP: (No reasonable offer refused):
(3) Uniden FPS910TS 900 trunked HT. 9 System, 9 group 'brick' radio (rather large, a tiny bit more than the BC1/200 HT). Comes with 2 brand new batteries, 3 older batteries, a SMC antenna (standard Uniden Mount), a gain BNC antenna (has BNC-SMC converter), a mag mount mobile antenna, 3 rapid chargers (not available anymore, hard to come by!!!) and 2 vinyl holster (no belt loop, just more for shipping/travel. $200/ each, or $475 for all 3. Invested much more into it. 2 currently programmed for TAC use.

(1) Johnson 9 channel 40?? (maybe 60) watt mobile. VHF. Was from Florida Sherriff or police which went to 800. Programmable by computer from Johnson Dealer. Must use external speaker (I can dig one out, standard 3.5mm plug), hand mike, and power cord included. GREAT radio. Scans, PL, everything. $250/bo.

(1)Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, Dual watch, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) (PLEASE don't ask how to do it, I was overrun by more questions on how to do it than offers to buy..)Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $280/BO.

WTB: Icom U-16, must be in good condition. Make offer, or trade for one of the above??

WTB: Yaesu VX-10.. Make offer, trade for ALL of the above?

All prices plus shipping + COD. I am NOT a company, just a collector of stuff I no longer need. <GRIN>

ALL PRICES NEGOT.! I need to sell, so give me an offer!

eplatt@wco.com, or call me anytime at 415-939-1037.

Interestingly enough, gel-cell batteries are all but gone from the scene in the U.S.

Low/no maintenance batteries these days are "depleted electrolyte" or "glass-matt" varieties. I only know of one mfr. who still makes gelled electrolyte batteries, and he's in Germany.

The big problem with depleted or glass-matt batteries is that all have some plain old electrolyte (acid) in the cells, and although they are spillproof, and can be used in most any position, overcharging can (and WILL!) rupture the cells, and douse the area with acid. Yep - once the hatch ruptures, all bets are off as far as "spillproof" goes. Since these batteries have sealed cells, it is important to determine how much (little?) over-pressure will rupture them.

I've found many will rupture with as little as 2 PSI over-pressure. You can generate this amount of overpressure by connecting a very small receptacle wall-mount charger to a 2 AH battery, and charging for a weekend. This is of course over-charging the battery - more importantly, it is VITAL to use the mfr's recommended charge system!!! This will typically be a "constant-voltage" type charger - NOT the (much more common) "constant current" type.

Lastly, I have to agree with KD1YV - this weekend I had a 6 AH depleted electrolyte battery sitting on my back seat - the "zip-cord" wire I had connected to it (with a beral connector termination) aparently had a spot where the wire did not have adequate insulation between the two conductors (might have been damaged earlier, but it didn't show). While driving down the street, the entire passenger compartment filled with acrid white smoke - the wire had shorted, and only quick action on my wife's part saved the car from a real calamity. The cells were hot enough to start the wood case I'd placed around the cells smoldering! I shudder to think about these cells in a sealed, pressureized aircraft cabin! This battery setup had fuses in line too - the short happened very close to the terminals.

>
>Scott, KF6FCN

Using directional antennas, 3 or more stations can compare bearings to the "target" on the repeater input frequency. On a map, this CAN give you a general area to start a search.

Using small beams, attenuators, and handhelds, an active search in the prescribed area can find the offender relatively quickly if he transmits enough.

It is a double-edged sword..... if the jammer doesn't transmit enough to be traced, he isn't much of a problem. If he is a big enough problem to get a few hams off the couch and in to a car to search for him, then he probably does transmit enough to be found.

This kind of search effort must be practived and coordinated to be effective. That is why "Fox Hunts" or "Bunny Hunts" (find the hidden transmitter "games") are organized. They are a TON of fun, you learn by doing, and you can build a pool of trained "bloodhounds".

Source record: 220010

I'm still looking for pc soundcards using the Analog Devices PSS (personal sound system) chipset (AD-2115 dsp with ram, AD1848 soundport, and the ECHO asic ESC614A). I think it's the best way to solve my problem: On July 12, I asked:

1) Are there any sound cards with DSP chips which can do modest "real-time" FFTs, say 512 or 1024 samples, once a second, etc. or even slower, without loading down the main CPU? The results of the FFT should be displayable in a window. Sounds real useful - anything available?

2) What's a good sound card with a DSP and a good library of C routines and compiler to make use of said chip?

3) Anybody try DC-coupling the sound card A/D input stage or at least paralleling a much larger coupling capacitor for reponse down to 0.5Hz etc? As you can guess, I want to do some simple vibration monitoring!

The Analog Devices website says Cardinal, Adaptec, Orchid, Media Devices, Western Digital, and other make PSS soundcards. But I can't confirm that - I suspect these companies did make them (and like Cardinal, stopped) or meant to make them (and didn't). They also mention Wearnes Technology (who are they?).

Can anyone make any suggestions? I do know quite a few hams and radio shortwave listeners have worked with these cards and the DSP to make realtime audio filters in their computers.

Anybody want to sell some old Cardinal or Media Devices boards?

Rick

I've listened to that kind of rubbish on 75 meters at about 3.815mhz. These guys ID and many of them are in California. They take paranoia to extremes. They talk about the United Nations taking over our military, fears of being controlled via a national ID card and just fear that the government is watching them and is after them. I suspect many of them are tax dodgers and that is fueling their fears. It would be entertaining if it weren't for the fact that these guys are grown adults.

I don't know where you get your information, but it is both uninformed and incorrect. The ABA Model Rules of Professional Conduct Sections 2.0-2.2 makes it quite clear that if two clients are adverse in an action, the lawyer cannot represent either, unless one gives the lawyer permission to represent the other.

>Conflict of interest means that he is breaching confidentiality or using
>knowledge of one client to benefit the other.

No, that's not what it means. It means that the lawyer cannot diligently represent one client without failing to diligenly represent the other. (My words, but that's the gist of it.)

>Just the suspicion of this
>can cause his clients to leave. Proof gets him disbarred. No wonder he is
>pissed off.

Wrong again. Disbarment is not always the sanction imposed on a lawyer who violates the rules. Sanctions usually are less severe, such as a public reprimand, or other punitive, non-disbarment stuff.

Well, I heard from someone last night that mentioned the fact that
there is a guy up in Heber, or there-abouts, who has a show that he
transmits on shortwave. But this guy is not a ham. I guess the stuff
is near the 75 meter band, but not in it. I haven't heard it myself,
probably to far away for ground wave reception.
I did however, hear those weirdos from out of state on 3950KHz.
Playing recorded, and silly mind you, messages over and over again.

You can go to http://www.ualr.edu/~hamradio/callsign.html and type in your city, state, and zipcode.
Then it will give you a list of people who are Hams and in your neighborhood, After you get it, write a few letters and hope for the best.

Hi!

I've really been enchanted with some of the features of the low-end (Radio Shack HTX-202) 2-meter handheld I just got. I guess "paging" and CTCSS are pretty standard stuff on ham and commercial HTs. Unfortunately, this does me no good when it comes to keeping in touch with my family since none of them are hams (yet).

Anyway, I'd like to find out if there are any Citizens' Band handhelds with either "paging" or CTCSS... just *some* way to make the unit stay quiet until one is trying to reach the other.

Level-triggered squelch only works when the person trying to reach you can hammer the air harder than everyone else on the channel, but I'm talking about *handheld* units... not base stations.

Are there any CB handhelds (27 MHz or 49 MHz) with paging or CTCSS?

There is a local radio station who has an sports guy who always reports
all the latest conspiracy threads. During the Freeman standoff he
reported that the feds were even jamming the ham radio stations the
Freemen were using to communicate their side of the story. I didn't
hear this anywhere else. Were their ham's in the group, and is it
legal for the goverment to Jam a Ham operator?

Did anyone else hear anything about this?

>We have a few people on one of our best 70 cm repeaters who are on it constantly, sometimes 10-15 times a day. It is obvious that they are trying to avoid phone charges, because two of the parties are brother and
sister. One wonders if the've ever heard of a telephone, but there's no doubt what they are doing.<
<

I disagree with that being a problem, at least to some degree. My wife and I both are licensed, and both carry HTs. Our motiff for becoming HAMS was so that we could stay in touch. What you are suggesting is that we should both have cell phones. Now I will qualify my first statement. We do not just sit on the repeaters yik yaking about stuff that we can talk about later, or should be discussed on a phone, etc. What we do use the repeaters for is to keep in touch when we are out of simplex range. I have set up a nice base station and our simplex range is quite far when one of us is at home. I frequently chat with other hams in the area, attend club meetings when possible, pay my club dues, and participate with the emergency net when possible. However, my wife does not. SHe has no interest whatsoever in the meetings, or talking with other HAMs.

In my opinion, our conversations are just as legit as any of the other wastefull commmunications that I hear some of the people talk about. In our area, there are MANY husband and wife HAMs, and most of the traffic between these is for "keeping" in touch. Aside from their traffic, there is frequently people yik yaking about stuff of no relevance.

ANyway, the point is, the argument that two people shoudl have cell phones, and that they must be avoiding phone charges is ridiculous. That mentality suggests that the only communications that are acceptable on HAM is nothing; except tech talk, emergency or the weather or other hee hawing about nothing.

That's my 2 cents for what it's worth.

Quite right, the Canadian regulations do reflect the wording of the
treaty with respect to the citizenship of the licensee. I was only
addressing Schmitt's comment that appending the Canadian prefix area was
optional where in fact, according to the Canadian regulations, it is
obligatory.

There is a repeater active on Wittman field. There is also
a Ham Radio tent. Check your booklet when you register for
all the info.

Hello Jeff, welcome to Amateur Radio. You can find info at the ARRL page
at URL:

http://www.arrl.org/

There you will find "In Your Neighborhood: Divisions, Sections, license
exams, hamfests and conventions." For Columbus try:

Columbus,43219,614-861-6916,Wm Trigg Tabor K8NIO

And:

How to Get Started in Ham Radio: Your journey of ten thousand
frequencies starts here.

Hope to hear you on the air soon.

Umm, in case you've never been outside your little self indulgent amateur radio world... FM repeaters do operate on channels. We may identify them by their center frequency instead of arbitrary numbers, but they are channels.

>guage sender. These pumps can be noisey but I have not seen one
>cause electrical interference. After all sitting inside a gas tank they
>are sheilded fairly well.

If only that were true. The tank doesn't shield anything since the
wires aren't bypassed to the tank. Since feedthru caps aren't used
to lead the wires in and out, the wires form a ready path for the
interference to exit the tank, and enter your radio. Besides, the
darn tank is plastic.

The interference from Explorer fuel pumps is so bad that just
bypassing the leads with caps usually won't fix it. You need to
use a full L section LC filter consisting of a series choke and
a shunt capacitor. Ford even has a service bulletin out on this,
and will fit a filter for you (you may have to pay if the vehicle
is out of warranty). Sometimes even their filter doesn't work
well enough and you have to replace the pump too.

>I would be careful of fooling with the wiring to the pump. I have
>been told that they are connected to the EEC and if the computer
>picks up anything odd it will shut down the pump.

The pump is activated by the ECC (in response to the fuel pressure
sensor and the ignition switch), but that's just an output of the
ECC. It doesn't sense anything on that lead. If you short the wire,
you might blow the switching transistor in the ECC, though the fuse
may protect it. If you do your own work, disconnect the battery
before beginning, and test for shorts before connecting the battery
back up. That'll avoid any problems with the ECC.

The filter needs to be installed right where the wire exits the
tank. That's on top of the tank, so you have to drop the tank to
get to it. I believe Ford's filter actually goes *inside* the
tank, but that isn't absolutely necessary. Just install it right
at the tank and use one of the bolts of the access cover for
your "ground" connection (tie that back to the frame with a copper
strap too). While you have the tank out, it won't hurt to put a
capacitor on the fuel gauge sender lead either. Those can sometimes
become noisy (yielding a clicking noise when the vehicle is moving
that is very annoying).

Fords have a history of being radio unfriendly noise generators,
but you can solve the problems with bonding, bypassing, and
filtering. Our news department has a bunch of these Explorers,
and we had to go over them pretty throughly to quieten them
down. They were interfering with the 2-way, the scanner, and
even with the cellular phone. I hate to think what they would
do to a HF rig.

Our Chevy Suburban microwave trucks were much less of a problem
to quieten, just a touch of alternator whine to filter. Our big
Ford editing vans must use a different pump, they didn't need any
bypassing of the fuel pump, but they did need extensive bonding
and a good dose of ignition noise suppression (it was fierce).

By contrast, our IVECO satellite trucks were heaven, they're diesels.
The only problem we had with them was wheel static. Just fitting static
caps to the wheel bearings wouldn't work because they use floating
axles. We had to Rube Goldberg in a static discharge system to the
carrier housings and add a drag strap. We probably wouldn't have
bothered since the static didn't affect anything but the drivers'
CBs, but the drivers wanted their CBs to work *right*.

> Packet Radio: KI7FG@KA7AGH.OR.USA.NA
> Homepage (Eby's Cyberscroll) http://www.teleport.com/~arden/

Hi Arden,

You can get your 1x2 in Gate 2... and we should see an announcement of its opening date pretty soon. I am guessing that it will open around mid- to late-September.

Many people seem to be confused on this topic, so here's the scoop (as I see it):

Gate 1: get a callsign previously held by you, or by a deceased close relative.
Gate 1A: clubs can get a callsign held by a deceased former club member.
Gate 2: open to extra class licensees.
Gate 3: open to advanced class licensees.
Gate 4: open to ALL licensees.

NOTES:
1) You must hold the appropriate license class (or higher) for the callsign being requested; that is, a general or advanced cannot get a 1x2 callsign, but extra can get a 1x2, 1x3, 2x2, or 2x3. Advanced can get 1x3, 2x2, or 2x3. General/Tech can get 1x3 or 2x3. Novices can request a different 2x3.

2) You can request a callsign from ANY district, 0-9. Other areas, such as Hawaii, Alaska, Puerto Rico, etc, require that you actually LIVE there (or have a mailing address there) because of the limited number of callsigns they have available.

3) Once a gate is opened, it remains open. It is advisable, of course, to make your requests as soon as you are eligible, especially the extra class... because many of

the "neat callsigns" (suffixes like DX, AM, FM, CW, etc) will probably go quickly. But... DO NOT FILE EARLY... the FCC will return the application without action.

4) Be sure to completely fill out the necessary lines on the 610V form. The FCC reported that many people forgot to put their current callsign (the one you wish to give up) on Line 6. Again, the FCC will return the application without action if the form is not properly filled out, signed, etc. Also be sure to attach a photocopy of your current license on Line 8.

5) Don't forget to send the money! Use a personal check, bank draft, or money order. Personal checks will not be "held" for the funds to clear... so there will be no delay in processing if you pay by check. An additional form, FCC 159, is only needed if paying by credit card (or using one check to pay for multiple applications). The FCC payment instruction form (FCC 1070V) *erroneously* stated that FCC 159 was needed for money orders, but that is not the case.

6) Mail the application to the CORRECT address... which is not given on the 610V!
Applications go to: Federal Communications Commission
Amateur Vanity Call Sign Requests
P.O. Box 358924
Pittsburgh, PA 15251-5924

I hope that helps to clarify things. Best of luck to all!

Latitude Band
Date Low Middle High
30 Jul Normal Normal Normal
PCA Event : None

3B. GLOBAL HF PROPAGATION FORECAST
Latitude Band
Date Low Middle High
31 Jul Normal Normal Fair
01 Aug Normal Normal Fair
02 Aug Normal Normal Fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Date T index
30 Jul 12

Observed Australian Regional MUFs:
Darwin: 15-30% depressed during the local day and otherwise
near predicted monthly values.
Townsville: near predicted monthly values.
Sydney, Hobart: near predicted monthly values during
local day and 30-50% enhanced during local night.
Night-time Spread F at Hobart.

Predicted Monthly T index for July: 10

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
Date T index MUFs
31 Jul 10 Mostly near predicted monthly values, with 10-30%
depressions during local day across northern
Australia.
01 Aug 10 As for 31 July.
02 Aug 10 As for 31 July.

A Windows version of the IPS HF prediction software, ASAPS, will
be available from early August 1996, for AUD350.
Upgrades from DOS versions 2.0 and higher will be available for
AUD50.

>Have you read Part 97 concerning this? The term "pecuniary interest" is
what is in effect here...
You get PAID by your employer, therefore its illegal to call your
"employer" (that includes anyone also paid by your employer) and discuss
anything you get profit from (or less profit!).
<

Ok, here is another scenario for you:

I am a teacher at HS A teaching C subject. There is a teacher at HS B
that also teaches C. Occasionally, we get together to talk about how our
class is going and things that we are doing, or would like to be doing.
We usually meet at his house, and I am invariably late. I have not
called him on the patch because he is a fellow employee of the same
district, but also because he is hard of hearing and it is difficult to
talk to him on a standard duplex land line phone. But I have been
curious if this type of call would be acceptable.

So what do you all think?

Repeaters operate on frequencies just like any other amateur transmitter. I like to hang out on 7030 kc but no one in their right mind would call that a channel. QRP ops hibernate on 7040 kc; that a group of operators nationwide monitor that frequency doesn't make it a channel. The 20M NCDXF beacon system lives on 14.1 Mc. Is it a channel?

The 2M rigs I've seen allow an owner to vary the frequency by 5 kc steps. Are each of those channels?

6509. Program for sending CW via LPT port?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-30 00:00:00 UTC
From: K5ESW@nando.net
Message-ID: <4tll9p$qjf@castle.nando.net>
Source record: 220042

I am looking for a freeware or shareware program that allows sending CW from a computer keyboard via the LPT port . I am able to use my logging/alert program (DXBase) to send CW, but it is not as flexible as I would like. I would like parameters to control keying weighting, and I would like to control speed changes from keyboard function keys.

I know their are commercial contest programs such as CT, but I do not need all the logging and contest features.

Are there any freeware or shareware programs available that allow flexible computer CW via the LPT port?

On the contrary - we boatanchorites wear the name with pride! We
revel in taking what other people think is obsolete junk and bringing
it back to life and operating it on the air. Yes there is a certain
defiance to the name "boatanchors" - that is part of the fun.

Do a Web search on "boatanchors" - you'll find lots of sites
where people display their collections proudly. The "boatanchors"
e-mail group has been very active (around 500 members these days
I think) for almost four years now, and I can't recall anyone there
objecting to the name.

One of the reasons I like "boatanchors" as a name is because it
identifies both the equipment and the spirit of cameraderie that
exists among "boatanchor" fans.

I've gotten friendly jibes at hamfests from folks who say "what are you
gonna do with that boatanchor?" as I am hauling away some 100 lb.
treasure. What an I gonna do with it ? Have fun, that's what! Fun
finding out how it is supposed to work, fun fixing it, fun getting on
the air, and fun talking to like-minded folks....and fun knowing that
I'll be operating a rig I couldn't possibly have afforded when it was
new, and that on the air may be pretty much the equal of someone else's
YaeComWood which cost 10 times as much.

Boatanchors forever!

IMHO,

With a 2.5uS pulse rise time I get about 150 KHz bandwidth (back of
the envelope) so yes, 2m is out, but 440 would be okay.

I haven't tried sending with my left hand to any great extent yet, but it sounds like a good idea. I'll try it, Lyndon!

I've learned to send with a keyer while holding the pen(cil) at the same time. That way, it minimizes the effort and time to pick it up. But you still have to move your hand to the paper.

With the advent of contest loggers, I find I can operate a whole contest without ever writing anything on paper. It's all done on the keyboard. I still like to send with the paddles, though. I can add that personal touch that CT doesn't inject into the QSO.

My tip is to relax and take the test. I believe that anyone who can
get fairly solid copy at 11 wpm can easily pass the multiple guess 13
wpm quiz. So just go for it and don't fret or lose sleep worrying
about what speed you think you can copy. The time to get your speed
up is AFTER you get the General ticket.

Good luck. Let us know how you made out.

Remember that the VORTAC at 1 GHz is pulse modulated. It requires
a wide bandwidth and is not permissable in the 2 Meter band.

I think 2.3 GHz is permitted.

Folks,

Isn't what we are talking about abuse? Part 97 seems to try and address the possible abuse. I am sure that noone really wants anyone to get fired for being late if there would be a way to prevent it. But I do understand that using autopatch simply to avoid buying a cell phone is NOT what autopatch was intended. I would think that if a member of a radio club found themselves in a spot, his fellow club members would find thier way through to help. Even if they had to turn thier radios down for a minute or two.

It's not a pastime. It's a service. Read the FCC stuff in your study guide.
Don't feel embarassed for us, we were doing fine before you got here.
We'll be doing fine after you're gone, if you decide to leave.

>Hams lay claim to vast areas of the spectrum. The equipment on the market
>today is cheap, reliable, and offers a staggering array of performance and

Cheap, huh ? Let's look in the catalog. Last time I bought a top of the line
Icom HF transceiver, it was about $1400. Now I can get a 781 for only $6600
or the not top of the line 775 for only $3900. Not exactly cheap, but - OH,
thats right, you said you were a NEW guy. When you say ham 'equipment', you're
probably referring to a Radio Shack HT, right ?

>features. And STILL you can't seem to attract enough interest from
>prospective new users to fend off attacks on the spectrum you own. Witness
>the recent shots at 2m and 70cm by the commercial lobby. We still hear,
>years later, bitching about the no-code technician class, a move that
>breathed more life into amateur radio than anything in the last couple of
>decades.

We did 'witness the recent shots' at 2m and 70cm. They were a figment of
somebodys imagination. Still are. Even the FCC said so. From my prospective, I
can't see how the no-code tech license 'breathed more life into amateur radio'.
I imagine it filled up a lot of 2 meter repeaters with people who use to be on
11 meters. I went to the local 'ham' club meeting this month, which is
something I haven't bothered to do in about five years. Same discussion as five
years ago - the repeater. I didn't want to be impolite by just leaving, it's
not a very large group anyway, so I tried to add to the discussion by bringing
up the fact that vanity gates are open that would allow us to obtain the call of
a silent key who was a very well known ham here and use it on the repeater.
I wasn't really too surprised when one of the guys who uses the repeater ask the
question 'Well, what IS the callsign of the repeater anyway ?'.

'We' aren't in the recruiting business. The ARRL is. They need to sell magazine
subscriptions. W5YI is, he needs to sell code tapes. Gorden West is, he needs
to sell his 'dipoles for dummies'. Somewhere along the line you got the
mistaken impression that hams are supposed to be standing on street corners
looking for new recruits. That's not hams - that's the Salvation Army that
does that, John. I think if your career in ham radio advances, you will find

that most hams are very willing to help new people get started in the hobby if new people approach them and ask for help. But very few hams are running around trying to 'attract any interest' from non hams.

>Get OVER it! Find ways to solve problems or watch as people who WILL use
>your parts of the spectrum take them away from you.

It all depends on what you mean as 'your part' of the spectrum. What I consider the 'ham bands' (HF) has gotten bigger in the last ten years, not smaller. We were given three new bands. If someone takes away two meters, as you and a few other people imagine they are trying to do, a lot of new 'hams' will be out of business, and maybe a few old ones will be too. But you have to remember that to a lot of us 'old' hams, VHF ain't ham radio. HF is. Nobody wants HF, except for Radio Moscow, The Voice of America, and a few long distance bible bangers. There's PLENTY left for us old hams.

You see, John, to some of us, using the autopatch and talking to somebody 3 miles away on the repeater is not what keeps us interested in ham radio. We're more interested in a lot of things that some 'new' guys have never heard about. Grey line low band DX, long path openings, over the pole DX, stuff like that. Anybody can run into Radio Shack and buy an HT, charge the battery, and talk on a repeater. Everybody can't figure out when and how to work another ham station half way around the world on 80 or 160 meters. Some of us won't even miss two meters if it goes away (which it probably won't).

You didn't mention your call John, you said you are new, but what bands are you on ? Are you on 2 meters ? 440 ? Six meters ? 1.2 GHZ ? HF ?

>Does this make any Sense????

It all makes sense .... except for the "must be certified". There is no requirement for one to be certified or licensed in order to make repairs to a CB.

The rules for CB are written so that your average, unlicensed, non-technical "Joe" can read them easily. That's why the CB rules look like an FAQ. If there was a requirement for certification or license the rule would say "...repairs must be performed by...", rather than "...should be...". It's a suggestion to the non-technical user since he is ultimately responsible for the proper operation of his station.

A fine job has been done here in explaining what certification means... but to the answer the original question, "License required for CB radio repair?" - the answer is "no" - no license required.

Since the Democrats have spent us into the poor house, the Republicans are apparently trying to raise money, without additional personal income taxes, to keep the country from going into financial ruin. Commercial frequencies are up for auction.

Bob Dole is not in Congress any longer or haven't you read the papers.

You do not need money to "cover" a cut back if there was indeed a cutback. If the Democrats refuse to cut back, THEN you need additional revenue to cover the EXPENSE.

Where does it say that Congress is trying to auction the amateur bands? Just because a particular group covets them does mean they are going to be auctioned.

Instead of bitching about Republicans, bitch about the Democrats who have spent us into the poor house requiring politicians to dream up ways of new funding sources to cover all the money being spent. Call Billy Clinton and the rest of the free spending Democrats and ask them to CUT BACK SPENDING!

6530. ARES/NTS/RACES with just an HT?

Hi all!

I'm just getting back into the hobby, but don't have a lot of "mad-money" to put into it. So I'll likely only have a 2-meter HT for quite some time. Anyway, I think I'd like to get involved in ARES or NTS from the descriptions I've read on the ARRL web page but I'm wondering whether I'll be of much use with just a 5-watt, 2-meter HT.

I'm also wondering what kind of time commitment would be expected. Unfortunately, I don't have a lot to put into it... but I'd still like to get involved in something that would make the hobby not only fun, but *useful* as well.

Hi there
Is there anyone who can help me figure out a problem concerning a design that I have seen in a book.You will need to have the book to help me.
The book is RF CIRCUIT DESIGN by CHRIS BOWICK.
On page 159 there is a diagram and design of a 15W 100MHz amplifier.
I understand the input and output matching that he has done,but where did he get the 310 ohm resistor and the 1uH coil that are connected to the collector of the transistor from.These are also in parallel with the output of the transistor and I would assume affect the matching network.These don't seem to have been taken into account.
Any help appreciated
Cheers

It's not dead. Takes time to ramp up production for Christmas sales
you know. (GRIN)

I haven't seen anything released for FRS yet. RS said it will be
toward December before they roll anything out.

And yes, you have to use ONLY type-accepted radio equipment for this
band. The deviation is to be 2.5Khz or less, and the power output is,
I think, 1 watt or less. All units will be handheld, no bases. No
external items may be added to the radios either. i.e. Antenna,
mic..etc.

Hi Everyone de Art in Freedom, Maine.

I would like to let everyone know that N1BUG will be active on 2 meters during the Perseids from FN56SA. Paul will be operating Field Day style from high ground with an excellent horizon from S thru W, and is willing to work run with anyone/anywhere.

Paul will have 150 watts and 2 big yagis.

I am handling skeds for him, and plan on having full time 2 meter contact with him (from fn54hl, my grid). So, last minute skeds can be made, but hopefully this will be the exception and not the rule.

Paul will have no phone from the hill top.

If anyone would like a meteor or tropo sked, please contact me at the earliest possible date.

Please pass the word to anyone who might be interested. Packet radio has proved to be a bust regarding getting the word out, so appreciate any word of mouth advertising you can give.

Paul will be available starting August 12 thru 1400z on Aug 13.

If necessary, I can be reached by phone at 207-382-6009. Or, drop a line to artky1k@juno.com (don't use reply function).

Art, ky1k@juno.com

>Any tips?

Yeah, you've hit the classic "hump" where the brain can no longer translate dits and dahs to characters fast enough to keep up. You learned the code wrong, and now you have to unlearn it and relearn it as complete character sounds. This can be very difficult to do, especially if you've spent a lot of time with slow code, and doubly especially if you've been *sending* Morse.

Traditionally, this was the place where Novices fell by the wayside. Because they learned Morse wrong, and then operated on the air for up to a year (until their non-renewable license expired) trying to build code speed, they got stuck on the "hump" and many never got over it.

You can avoid the "hump" by learning Morse correctly in the first place. The correct way is to forget that anyone ever mentioned dits and dahs. Forget ever hearing that Code has mechanical aspects. Instead concentrate on learning the *sound* of each letter, number, and punctuation mark as a single unique unitary sound from the very beginning.

Most operators who managed to overcome the "hump" the traditional way say that it "just happened" one day. Their brain shifted gears spontaneously and started to hear whole letters. Well, that's a very inefficient approach, and often doesn't work. That's because they don't understand how the brain "just happened" to shift gears. If you deliberately recognize the need for the brain to operate another way from the very beginning, you can intelligently work to accomplish that end without going through the damaging intermediate step which you'll have to unlearn.

There have been a number of posts lately on this topic, detailing how to go about it. I've described one effective method used by the Allies in WWII to train North Africans as intercept operators, and later enhanced by modern information and coding theory, and by cognitive research. Another method, developed by the German Koch prior to WWII is similar, and similarly effective.

Your task is going to be harder than if you were completely ignorant of Morse because you've already learned the wrong things, and it will be hard to unlearn them. (It's like trying to teach a confirmed hunt and pecker to touch type.) But there's a reasonable hope you can do it quickly if you *put away the key*, stop trying to copy plain text, and get down to some serious drill. You can either use the drill methods I've suggested, or use the Koch method. SuperMorse can do either one.

Remember, passing the test does not require sending. Don't try to send until you can copy comfortably at the speed you need to pass the license class you want, IE either 13 or 20 WPM. Sending is a trivial skill to develop once you know what good code is supposed to sound like. You can pick up 20 WPM sending in a couple of days once you already can copy at that speed. If you introduce sending too early, however, your mind will get trapped into the mechanics of code, and that will adversely affect your ability to develop the correct code sound recognition reflexes.

You could just try to bull through the traditional way, and you might be one of the lucky ones whose brain spontaneously shifts gears rapidly. The odds aren't in your favor, however. Likely, you won't break through in time for your test unless you take radical steps to force that shift.

Here's another tip. As you start to become comfortable with copying at the desired test speed, make your practice code loud, distorted, and with a lot of room echo. And have a talk radio station going loudly in the next room. That's the way it will be at the test session, and you won't be surprised (and dismayed) on test day if you've already practiced that way.

The transcript is correct. I heard Ross say it during the program
broadcast. Perhaps he meant shortwave, but then again, having
listened to some of the QSOs out there, maybe he meant exactly what
he said.

Just remember what you have to understand is that they have to prove
that you are not in fact using a Frs transciever on the frequency. I
say save your time and effort and by a UHF business band radio and
tune it up and enjoy the free communication. You can rule the band
with up to 40 watts and have fun at the same time. put an antenna
outside the car and transmit away. Here is the best part. Anyone
asks what the antenna is for on the car? tell them it si for the cell
phone. works all the time and half the crowd will not have a clue.

It depends on what they mirrored the glass with and how conductive it is. I ran in to the same problems about five years ago when the office building they were building at work had that kind of glass.

We experimented at 23 GHz (one of the many microwave links to and from this building) and discovered an atteunation of about 10 dB. We decided to do things the right way and erect a radome window on the penthouse. It works pretty well.

How about GMRS? That service (formerly one of the 4 CB bands, I forget which letter; 11m was only one of the 4 CB's) has repeaters and I thought they had PL/CTCSS and DCS/DTMF-page. GMRS still requires a license and membership in a local repeater, but I think one licesnse covers the whole family, no exam, etc. (So why do we need a Family Radio Service? I dunno, I think R/S thought the GMRS/React folks didn't want the 49Mhz crowd joining them.) It's designed friends-and-family use, and has been adopted by higher-profile REACT groups as well (you know, the socially useful CB'ers), who sponsor some of the repeaters.

As you note "yet", one solution is get them all TechMinus licenses.
A pile of sealed HTX-202's and a pile of unwrapped "Now You're Talking" books from Radio Shack might get them motivated. (I need to get my copy back from my sister-in-law and nephew so I can let my XYL "accidentally" find it when she needs something to read :-)
My VeryYL daughter is I hope less than a year away from reading well enough to memorize the regulations (we tried reading aloud from the "Alpha and Zulu" artsci comic books TechPlus study guide, but the boring parts are still boring even with anthropomorphised di-dah's as comic-book characters explaining the arcana of FCC regulations as dialogue).

I have been involved with ARES/RACES and NTS for a couple of years now
and all I have is a borrowed 2m/70cm HT! Look for a local 2m traffic net
in your area. If you need help try looking in the net directory at:

ftp://oak.oakland.edu/pub/hamradio/arrl/infoserv/fsd/netdir95.txt

The time you commit to ARES/RACES/NTS is entirely up to you. The local
traffic net here in Cincinnati, OH meets nightly on 2m. This is the
usual way that NTS is set up. From a local net, the traffic flows in/out
of the are through a section net; here the Ohio Single Sideband Net. I
am involved with the Hamilton County Amateur Radio Public Service Corps.
If you are not familiar with ARPSC it is an organization that supports
ARES and RACES. I am the HC ARPSC Training Net manager hwich meets
weekly. If you have any questions feel free to e-mail me at the
address below, YOU MAY HAVE TROUBLE WITH THE REPLY ADDRESS IN THE HEADER!

1) You can use a ham radio (or anything else) in a private aircraft at the discretion of the pilot-in-command (PIC). Generally for VFR flights this is not a problem. For IFR flights the PIC will probably ask you to shut down while conducting the instrument approach (I would).

2) Gell Cell batteries are widely available still. Sonnenshine (sp?) of Germany makes the best ones I know of on the market. They will deteriorate after about three years of trickle charge. They are not cheap.

3) Any lead acid or Gell Cell has a pretty low internal resistance and will heat up pretty badly if shorted. That is the hazard with most battery packs. Be careful.

4) Private airplanes have Lead Acid batteries for starting the engine. They are vented, but they will not leak if hit by turbulence or unusual attitudes.

> Michael P. Deignan wrote:

> > Umm, in case you didn't memorize the question in the question pool,
> > we don't have "channels", we have "frequencies".

The HF spectrum (outside 10m FM subband) is indeed pure frequency,
you can slide down 3kc here, up 100kc there, whatever, and as long
as you and the others on the band have tight filters, you can find
QSOs at any measurable frequncy (in band of course!).

In case you haven't checked, there are channelized local band
plans for 2m. This certified code-free TechMinus is aware of
this administrative structure called Coordination for repeater
pairs, which although not exactly required, is required de facto by
automatic preference of the Coordinated Pair in an interference case.
The Coordinators and local band-planners have channelized
the FM portion of all the VHF and UHF bands (including 10m FM as VHF,
which it used to be called! check your history, 'tis true).
The 'channels' differ by region, depending on whether you have
reverse-splits or 20 or 30kc separation or geographically disperse the
15kc splits or whatever, but each local plan and Coordination state has
channelized each metropolis.

Proof of channelization by reductio ad absurdem:
If you think your favorite 2m rptr is on a frequency rather than in a
channel, then try moving up 5kc of frequency (plenty of
space for a serious beeper or duck-talking SSB'er to move up, right?)
and try to have use this new frequency (up from output if duplex,
from input for simplex). You'll find you're in a channel still, and
mis-alinged at that. QED.

I suppose I should have just ignored this, since the sender has
an axe to grind:

> > Another fine example of what the codeless license has given to the
> > amateur radio service.

Another fine example of blaming any statement which can be constured as
ignorant and can't be traced to over-exposure to HF and di-di-doo-doo
on "no-code licensing", thus demonstrating that idiocy is not confined
to us TechMinuses.

The good news is the hard-core vacuum-and-beepers who are showing their
senility with the "I worked hard to learn the morse code so you should
to or go back to 11m where you came from" attitudes will eventually all
get their SK certificates, at which point the ARRL can shut down HQ, if
it hasn't made overtures to the next generation of paying members

first.

While thinking the CW requirement is about as sensible as testing only analog vacuum tube electronics, I'll happily agree that the NoCode exam I took was way too easy. The multiple-guess isn't the problem; the shortness of the pools and the idiocy of the "distractor" wrong answers are the problems. Too many of the distractors are just hilarious or obviously boners so it takes very little work to pass. The General test was a little harder; I only "almost passed" without studying its material in specific. Probably could pass it sutdying only the regulations and reading the technical material once, no memorization. That's wimp. The tests should really test something. Thus I sympathyze with the fear that removal of the 13wpm CW barrier on General would happen without a concomitant stiffening of the General pool (larger, tougher, more technical -- how about some digital electronics like the Commercial RTO? modern modulations? spread spectrum?). However, since 75m sounds worse than anything I've heard on 2m (although I've heard ABOUT worse on 2m in say El Lay, but those are bootleggers not licensees), the old rag-chewers should get their own house in order too!

Slowly demographics are convicing the ARRL that the Core Membership (beepers and SSB contesters) isn't the future of the ARRL. The New Member Companion is only just a start in that direction. In the meantime, all of us TECH MINUSES need to pay the subscription fee to QST, tell them and CQ to stop telling us how wonderful CW is or that HF is the only direction to expand from VHF FM (although they're geting better about covering VHF/UHF non-FM modes lately) every issue like we hadn't heard it on the repeater 6 times a week already, and VOTE in Section and Division elections so the ARRL notices that we care how they represent US before the FCC and Congress and the IARU/ITU.

I'm gonna keep my Code-Free call letters as I upgrade; eventually, it'll be an old-buzzard call, while the vanity program re-distributes all the "cool short CW calls" to youngsters and they lose their value. (Even if I have to learn the beepin' code to upgrade, I'll do it; no rush the way the HF bands sound (I listen to HF frquently; more often to the BBC than to W1AW, and as scratchy as the BBC AM sounds these days, I don't want to think about how SSB would sound at legal or non-QRO power; I gotta fix that sync detector on the sony once I repair that motherboard ahead of it on the bench), but I'll have it done in time for the sunspots, whether the IARU fixes the idiocy or not.)

Check with Honda themselves. Find out what their attitude is to RF. Corporate America tends to get real cagey when you're trying to get them to commit. If they say all below 100 watts, then you're good to go.

By the way, your antenna installation will make more difference with the RF interference potential than anything else. Have you decided where and how you want to mount it?

Well, if you think of a channel as tuning by a discrete step in frequency, as opposed to infinite variability, then virtually all modern HF rigs are also "channelized." True, the steps may be only 1 or 10 Hz each, but they are steps, nonetheless.

I love my coal-fired Hallicrafters, which _does_ tune frequencies :-)

>is involved. Every signal occupies some amount of bandwidth;
>even CW occupies bandwidth like any other AM signal. A look in
>my Webster's dictionary shows that the salient definition of
>'channel' is 'a narrow band of frequencies used by a radio transmitter'.

My Oxford dictionary makes no mention of frequencies under the definition
of "channel", so let's stick to the common communicator's usage.

>So, Jeff, all of these frequencies you mention are center frequencies
>for CW channels.

Oh? What if I tweak my 7030 kc xtal to 7030.5 or 7031? Two new channels?
We think of a "channel" as being a fixed frequency given a designation
that a certain group of users understand. The HF marine channel 507
and the VHF marine channel 16 are known to maritime radio users. By
law they must operate on certain fixed frequencies. Operators in the
Citizen's Radio Service are also bound by law to operate on certain
fixed frequencies - every CB operator knows the purpose of "channel 9."
On the other hand, amateurs are allowed to be frequency agile; no other
radio service (except the military) is given this privilege.

Now, some want to consider 2M frequencies as channels. If so, there
would have to be a uniform designation scheme provided for this collection
of channels. What is it? Is operation between two channels permitted?
If so, shouldn't a frequency between two channels also be termed
termed a channel?

Channelization is contradictory to the amateur's frequency agility.

>What a nice reflection on amateur radio when people mistakenly get
>their underwear in a bunch over the use of a common term.

It wasn't a common term in the ARS, but like Roger Beeps and the 10-code, our once unique culture is being diluted to a level some find a bit nauseating.

>What's the big deal anyway?

I dunno. Got anything better to discuss?

Hi Glenn, How about using your editor? We already read everything you
included.

The TV and CB services are restricted to fixed frequencies - thus the
channelization concept. But aren't you glad we amateurs aren't limited
to fixed frequency operation?

>Sounds like some Hams are so paranoid about the CB crowd

Nauseated is a more accurate.

>they are afraid to use the term channel

Not afraid at all. Our amateur radio culture and definitions stretch back
80 years. We'd like to keep our vocubulary in tact for another 80 years
and not have it polluted with the likes of "Roger Beeps" and the 10-code.

>which is a perfectly acceptable term according to the dictionary quote above.

My Oxford Dictionary Of The English Language contains no mention of
"frequency" in its definition of "channel."

I was also wondering if it's legal to operate in *duplex*. I know it
would be a nasty mod for most CB rigs, but it's a piece of cake with
the ones that use TX/RX crystal pairs... isn't it? (I never tried it.)

This, of course, leads to whether or not it's legal to set up a
CB *repeater*... though I'm guessing that it's not. Anyone know why?

You didn't mention on what frequency your local repeater operates, but the 212 will transmit on all repeater frequencies in the amateur 2m (144-148 mHz) band. As shipped there is a cutoff frequency (145 something mHz if I remember) below which transmitting is disabled. This can be re-enabled through a series of key presses: it's in the manual, I believe.

And if you put similar setups at the remote reciever sites, you could
pinpoint the approximate position. Sounds like a project, aye?

Wait until you start trying to make QSO's and some of the...uh,
"seasoned" hams refuse to talk to you. They won't consider you a "real
ham" because you chose not to waste a bunch of time learning an
antiquated system of communication known as Morse Code.

The CB might look pretty good at that point.

I'm looking to buy a 1996 Honda Accord. Does anyone know if there any
problems with VHF RF with the Accord? I would ask the salesman but
car salesmen almost always lie. Better yet, is there a database on
the WWW somewhere with this kind of information?

Thank you for your help.

I would give you an answer to your previous question but the two
people I know who have that HT aren't on the air right now.

I have been told that ADI stands for Azden Development Industries,
although the ADI HTs take Standard batteries.

dct@bright.net wrote:

>Can you get the 202 modified for CAP use?
>

Yes, there is. Here's what you do:

1) Buy an HT that has a DC-to-daylight receiver.
2) Buy a roll of duct tape.
3) Tape the other HT to the HTX-202.
4) Now you have an HT that will receive outside the ham bands.

Seriously, there are NO -- REPEAT NO -- mods for the HTX-202. It is
designed with a narrow receiver for very good sensitivity and intermod
rejection. Any mods you may find, usually with 1 April on the date:
line, will destroy your HT and void the warranty.

Excellent point Jim!. The rules say that using selective calling is
legal, as long as the (one way) signaling lasts less than 15 seconds.
What is probably not legal is to have the remote CB key up in response.
The rules say that the only way to have "remote" transmit operation of a
CB is through a wire connection. It is my understanding that the FCC
set up this rule so that people would not make CB repeaters.

I would also warn that there are strick regulations in the USA on a passenger using a radio transmitter on a commercial aircraft. It is my understanding that not only do you need the permission of the pilot and airline but also approval from the FCC. Needless to say, you won't get that permission.

Get a Larsen antenna. I have mine mounted on the right rear window in
our Jeep Grand Cherokee. Just be sure you don't mount it over the
dark bands in the glass as they are often metallic. Works great.

7030KHz is a frequency; so is 7040KHz, and so is 14100KHz.

However, when you transmit information more than one frequency
is involved. Every signal occupies some amount of bandwidth;
even CW occupies bandwidth like any other AM signal. A look in
my Webster's dictionary shows that the salient definition of
'channel' is 'a narrow band of frequencies used by a radio transmitter'.

So, Jeff, all of these frequencies you mention are center frequencies
for CW channels.

On a 2m radio, the channel bandwidth is usually greater than 5KHz,
but every frequency you operate on represents the center of a channel.

What a nice reflection on amateur radio when people mistakenly get
their underwear in a bunch over the use of a common term. What's the
big deal anyway?

Hi Scott, My 1991 edition of the ARRL Handbook (the radio amateur's bible!)
has an entire chapter devoted to direction-finding techniques and gear.
If you don't have a copy of the Handbook, you'll find one in your library.

To summarize, you'll need a DF antenna. Rather than orienting the antenna
for the greatest signal strength, you instead turn it searching for the
weakest (called the "null"). The null will give a narrower arc than tuning
for the maximum. Now take a compass bearing through the null and mark that
bearing on your map through your position. You now have a line of position
(LOP), i.e., the transmitter will be somewhere along the line you've drawn.
At this point you can either change positions and compute another LOP, or
have a second person at another location pass you the bearing they measured.
Where the two LOPs cross is *supposed* to be the location of the trans-
mitter; in reality that usually doesn't happen. But at least you'll
have an idea of the transmitter's neighborhood.

If you can get three or more hams spread out over your town say within
simplex range of each other, you can pass the bearings back and forth
to each other; you'll have as many LOPs as hams, and with well-designed
antennas all those LOPs will hopefully intersect at a single point.
That will be the QTH of the "fox" (or criminal in this case).

You can polish your technique by DF'ing FM broadcast transmitters
in your city. Also, contact your local ham radio club and ask them
about hidden transmitter hunts (fox hunts). Lots of fun!

In the past, amateurs have been called upon to assist locating downed
aircraft and boats in distress via DF'ing, so it's a very useful skill
to master.

I had a Heathkit CB transceiver back in the mid-60s that contained built in "tone squelch." I think it was the GW-42. I'm surprised that with 11M being as crowded as it is today that modern rigs don't contain this feature. But as the previous poster remarked, tone encoders/decoders are easy to add.

Okay, no flames from the rec.radio.amateur guys. I was one of my town's REACT monitors. The very busy San Diego Freeway passed right through San Clemente.

Curtis is correct.

The FCC is a lot more woried about the commercial sector, and techs there are not required to be licenced. I am not licenced and I make a very good living fixing radios, legaly.

Yep. Stop listening to the jammers on 2 meters and start listening to the CW stations on HF. Better yet, start TALKING to the CW stations on HF.

Yeah, I know. I can only "hit" three western states with my lousy
Standard C-288a 220MHz HT...

You need to qualify what you're saying. Here in repeater-rich Southern
California, an HT will get you connected with about all you'd ever want.

<reposting since first post was messed up, had replies/header information user@site.com.. agent.ini was fried.> Sorry!

Must Sell ASAP: (No reasonable offer refused):
(3) Uniden FPS910TS 900 trunked HT. 9 System, 9 group 'brick' radio (rather large, a tiny bit more than the BC1/200 HT). Comes with 2 brand new batteries, 3 older batteries, a SMC antenna (standard Uniden Mount), a gain BNC antenna (has BNC-SMC converter), a mag mount mobile antenna, 3 rapid chargers (not available anymore, hard to come by!!!) and 2 vinyl holster (no belt loop, just more for shipping/travel. $200/ each, or $475 for all 3. Invested much more into it. 2 currently programmed for TAC use.

(1) Johnson 9 channel 40?? (maybe 60) watt mobile. VHF. Was from Florida Sherriff or police which went to 800. Programmable by computer from Johnson Dealer. Must use external speaker (I can dig one out, standard 3.5mm plug), hand mike, and power cord included. GREAT radio. Scans, PL, everything. $250/bo.

(1)Yaesu FT40, 99 Channel radio. Includes tx/rx mod, tx and receives from 430 -484.This unit is LITERALLY the size of a pack of smokes, maybe a TINY bit deeper, but the same height and width. (Just add an antenna.) Does 99 channels PL _AND_ DPL, Keypad programmable, dual VFO, Dual watch, digital voice (record up to 20 seconds from the radio or by mike and either play back through speaker OR back on the air! Record you call and never say it again! Searches PL & DPL (yep, don't know the PL? Just hit a key, and it tells you! (I Can't find this in the manual, I think it;s a hidden trick.) (PLEASE don't ask how to do it, I was overrun by more questions on how to do it than offers to buy..)Comes with low power battery pack, charger, manual, and box. Barely used. Would prefer Bay Area (California) but will ship. $280/BO.

WTB: Icom U-16, must be in good condition. Make offer, or trade for one of the above??

WTB: Yaesu VX-10.. Make offer, trade for ALL of the above?

All prices plus shipping + COD. I am NOT a company, just a collector of stuff I no longer need. <GRIN>

ALL PRICES NEGOT.! I need to sell, so give me an offer!

eplatt@wco.com, or call me anytime at 415-939-1037.

Date: 1996-07-31 00:00:00 UTC
From: sigi@noet.AT
Message-ID: <199607310853.JAA01690@serv1.noet.at>
Source record: 219975

Hello!
In Austria/Europe, I have bought the UHF-FM-TANSCEIVER EUROCOM E10,
which is manufactured by STANDARD and wich is similar to STANDARDs
C108. Does anyone know, how I can extend the frequency-range (433.055-
434.785 MHz) of the Eurocom E10 (or the Standard C108).
Is it possible to get more power-output of the Eurocom E10?
Greetings from Austria, Sigi. sigi@noet.at

6601. RF attenuation of mirrored glass at 900MHz?

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-31 00:00:00 UTC
From: jmorriso@bogomips.com
Message-ID: <1996Jul31.082945.2894@bogomips.com>
Source record: 219977
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.antenna,rec.radio.amateur.digital.misc

Does anyone know how many dB of loss mirrored office tower glass
windows have at 900 MHz? Or where I could look it up?

Cell phones work inside the building, so it couldn't be too bad.

I'm guessing between 5 to 10 dB.

I still have not seen any comment pro or con from either Jack Hill or
Philip Porch(the real administrators of the Boatanchors mailing list).
I have seen the statement of support from someone who claimed to be
in on the start of that mailing list, but in my mind, that does not
carry the same cachet as Jack Hill or Phil Porch. Was this just some
exaggerated claim?

And Channel 2 on my TV is a frequency, and channel 19 on my CB is a
frequency. Sounds like some Hams are so paranoid about the CB crowd
they are afraid to use the term channel which is a perfectly acceptable
term according to the dictionary quote above.

Your friend Igor would not qualify to operate his station in Canada in accordance with his US licence. Therefore, application for a temporary operating permit would be futile. However, if your friend was a citizen of Russia, and had a Russian licence, and Canada and Russia had a reciprocal operating agreement, then he would be able to operate in Canada

73 and live better digitally

: only fun, but *useful* as well.

Yes! I would suggest at lease one extra battery pack for the radio, and keep it charged up all the time. An external antenna for the car (if you drive) is also useful, and will keep your signal strong. An antenna for your house may also help, you will find that your 5 watts will get out great, with a little antenna help. As time/money permits, you can then look into an external amplifier, but for now you have a good start. I would say that at least 1/2 of our local ARES members have exactly what you have, with plently of extra batteries. Good luck!

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS News Bulletin 919 28TH JULY 1996

This is the Australian National Amateur Radio Teleprinter Society
with the weekly RTTY broadcast. We transmit on the following
frequencies and times :

3.545 MHz (Plus/minus 5) 0930 UTC VK2CTD (COL)
7.045 MHz -3 0030 UTC VK2CTD (COL)
14.070 MHz (amtor/fec) 0030 UTC VK2DPM (ALAN)
14.091 MHz 0030 UTC
146.675 MHz 0030/0930 UTC VK2JPA (PAT)
144.850 MHz (ax25 bbs) VK2JPA AT VK2WI
146.675 MHz (rtty mmbbs/repeater) VK2RTY

INTERNET RADIO-INFO-DIST AT UCSD.EDU

Enquiries to the society should be addressed to
the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,
N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA at
for air mail.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

A.N.A.R.T.S. News Bulletin 919 28TH JULY 1996

COLS COLUMN.

WELL I THINK I MIGHT HAVE PUT THE MOCKERS ON THE BAND CONDIT-
IONS LAST WEEK BY MENTIONING HOW WONDERFUL IT HAD BEEN. I
STILL HAD A FAIR NUMBER OF STATIONS CALL IN AND BACK BUT WITH
REDUCED SIGNAL STRENGTH. I GUESS MOST STATIONS WILL BE GETTING
THE CAST FROM THE PACKET SYSTEM. YOU MAY RECALL THAT I HOPED
TO GIVE A THUMBNAIL SKETCH OF SOME OF THE ANARTS COMMITTEE AND
OUR RELAY OFFICERS.

THIS WEEK WE COMMENCE WITH JIM VK2BQS. JIM HAS BEEN A MEMBER
OF ANARTS FOR MANY YEARS NOW, SERVING AS BOTH A COMMITTEE
MEMBER AND A RELAY OFFICER MAINLY ON 20 AND 80 METRES. MOST
STATIONS TAKING THE CAST WILL HAVE HAD CONTACT WITH JIM AT ONE
TIME OR ANOTHER. HERES HIS STORY. IT MAY EXTEND INTO NEXT
WEEKS CAST.

JIMS STORY

JIM WAS BORN IN PARRAMATTA NSW, 7TH AUGUST 1922. HE GREW UP AND LIVE MOST OF HIS LIFE IN GIRRAWEEN, ANOTHER SYDNEY SUBURB CLOSE TO PARRAMATTA. LEAVING PARRAMATTA HIGH IN 1937 HE JOINED THE NSW DEPT OF MAIN ROADS AS AN OFFICE BOY. WHEN WW2 BROKE OUT HE HAD TO WAIT TILL AUGUST 1940 TO ENLIST IN THE RAAF DUE TO HIS AGE, BUT JOINED AS A TRAINEE AIRCREW AND THEN SELECTED FOR PILOT TRAINING. INITIAL FLYING COURSE WAS AT NARROMINE NSW THEN AMBERLEY AND KINGAROY QLD.

HE WAS PRESENTED WITH HIS WINGS OVER THE STORE-ROOM COUNTER ON APRIL FOOLS DAY 1942. HE WAS ATTACHED TO 11/20 SQDNS IN QLD AS A BRIEFING OFFICER BUT WAS 'GIVEN' A TIGER MOTH FOR GENERAL COMMUNICATIONS WORK BETWEEN BOWEN/TOWNSVILLE/CAIRNS.IN JANUARY 1943 HE JOINED 73 SQDN AT NOWRA AND CAMDEN DOING ANTI-SUBMARINE PATROLS OFF THE EAST COAST. THIS CONTINUED TILL FEBRUARY 1944 WHEN HE WAS POSTED TO PORT MORESBY FOR TRAINING AS A LIBERATOR PILOT.

IN APRIL 1944 JIM WAS POSTED WITH OTHER AUSTRALIAN CREWS TO THE USAAF 380TH BOB GROUP IN THE NORTHERN TERRITORY, AND WAS ALLOCATED TO 526 SQDN AT FENTON. THE AUSSIE CREWS OPERATED AS USAAF CREWS ON BOMBING STRIKES, RECCES AND FOR JIM SOME PHOTO RECCES TO THE ISLANDS WELL NORTH OF THE NT. THREE MONTHS LATER THE AUSSIE CREWS WERE WITHDRAWN FROM THE USAAF UNITS AND FORMED 24 SQDN RAAF AT HAMBULLOO NEAR KATHERINE. HE THEN COMPLETED A FULL TOUR OF OPS OVER HOSTILE TERRITY ON BOMBING AND RECCE FLIGHTS. JIM AND CREW DID 31 OPS UP TO MID JANUARY 1945 WHEN HE WAS POSTED SOUTH AND BY APRIL WAS WITH THE FERRY FLIGHT AT RICHMOND IN NSW AND REMAINED ON FERRY DUTIES TILL HIS DISCHARGE ON 10TH MAY 1946. AT RICHMOND HE FLEW MANY DIFFERENT TYPES OF AIRCRAFT.

Notes of Interest:
CROZET, FT/W. After few weeks of QRT, Samuel, FT5WE is again active. Samel will try to work especially in RTTY, but, as he is suffering from noise problems, he will use a battery with an autonomy of only 60-90 minutes.

COMORES, D6 and MAYOTTE, FH. Mike, DL4XS, Diter, DL3KDV and Mirko will be active from Comores from 22nd August to September 3rd. They will move to Mayotte to be on the air till Sept. 11th. Plan include CW, SSB and RTTY. QSL via DL4XS direct or via bureau. Please note that the Callbook Entry is no longer valid.
New Address: Maike Stargardt
Friedrichsthal 21
51688 Wipperfuerth
Germany

BENIN, TY. Glenn, W6OTC, Eddie, G0AZT, Steve, KE6FV and Ray, WF1B will participate in CQWW/DX RTTY Contest (28-29 September) using the call TY1RY in the multi-single category. Before contest is possible a CW and SSB activity also on WARC bands. QSL via Eddie Schneider, P.O. Box 5194, Richmong, CA 94805 USA.

MALDIVE, 8Q. From 22 to 31 October Jesep, EA3BT and his wife Nuria, EA3AOK will be active in SSB, RTTY and CW (WARC bands included) from Malidive respectively as 8Q7BT and 8Q7OK. They plan to participate in the CQ WW DX SSB test. QSL via EA3BT (Josep Gilbert, P.O. Box 366, 08800 Vilanova i la Geltru, Spain.)

The VK2SG RTTY DX NOTES are also available on Internet at reflectors dx@ve7tcp.ampr.org and digital-dx@st.rim.or.jp . See also the OH2BUA WebCluster at URL http://www.clinet.fi/~jukka/webcluster.html

For next week's bulletin send your bandpass to Jules W2JGR at W5KSI.#NOLA.LA.USA.NA

Gl de (DX2) Luciano I5FLN at ZS5S.ZQAF.AF

ARRL DX Notes.
DX Bulletin 34 ARLD034

This week's bulletin was made possible with info provided by DXNL, Uwe, DL9GOA, Bob, DL7VOA, Tedd, KB8NW, Jim, N4UCK, and Contest Corral from QST. Thanks to all.

CAPE VERDE, D4. Veronica, IK3VAW, should have started her D4 operations last weekend from the station of one or more local amateurs. Check 14240 khz SSB. QSL via IK3VAW.

BELAU, KC6. Tosy, JA6VZB, is planning a DXpedition for late 1996/early 1997. The call sign KC6VW has been mentioned, as well as the timeframe December 28 to January 5.

VANUATU, YJ. Ron, ZL1AMO, has wrapped up operations as 3D2RW from Fiji and moved along and is now signing YJ0ARW. He is operating a lot of 40 and 20 meter CW, though he has also been on RTTY. QSL via ZL1AMO.

CLIPPERTON ISLAND, FO. Long distance solo sailor David, KE6WDL, is in the early stages of planning a trip for this winter from Los Angeles to Panama. David wants to stop on Clipperton Island and operate for a day or two, though he needs info on obtaining permission, Et Cetera.

OLYMPIC STATION W4O. Jim, N4UCK, reports W4O has been issued and is being used at the Official Olympics Commemorative Station in Atlanta.

COMING EVENTS

AUGUST 17TH-18TH SARTG WW RTTY

SEPTEMBER 28TH-29TH CQ/DJ WW DIGITAL

OCTOBER 19TH-20TH JARTS WW RTTY

Society information

The Society may be contacted at : PO Box 860, Crows Nest 2065 Australia, for such matters as membership and general enquiries. Enquiries can also be made by packet to the President (Col) VK2CTD at VK2WI, or the Secretary (Pat) VK2JPA at VK2WI.

News items may be sent to Broadcast Officer PO Box 60 Blacktown 2148 Australia, or fax to (02) 672-3392, or by packet to VK2JPA at VK2WI.

Email address for the Broadcast Officer is :

patl(at)pitt.conmusic.su.oz.au
or patl(at)extro.ucc.su.oz.au

Email address for the President is :

Colin.Davies(at)dse.com.au

The Society welcomes news items on any digital subjects from anywhere in the broadcast coverage area. We are looking forward to news from your areas to let other amateurs know what you are doing in the hobby. Hope to hear from you.

73s de Pat VK2JPA Broadcast Officer

Source record: 219987

Since the GPS has become fully operational, the other navigation modes have become obsolete. There was some debate about this even 5 years ago. The economy of GPS outweighs any other factor. VOR is generally +/- 2 to 4 degrees error, LORAN even worse. TACAN (or DME) is expensive. It costs money to send pulses. But what use are these modes? They all give your position relative to a point on the earth. With a computer you can make your own points and relate. Navigation can now be a completely passive thing. GPS accuracy is also a problem. Just sitting on your desk it moves your position around. This makes it hard to compute instantanious heading (you need to simulate the directional gyro). The navigator generally wants their heading, and bearing and range to a point on the earth. Guess there's still a need for a way to simulate the directional gyro, without having to calibrate it to the compass every few hours. Something that has a stability of +/- 2 to 4 degrees....(but not as expensive as INS).

Cookie Monster <willie@cpeq.com> wrote:

>You know, I took a great deal of crap being a citzens band operator. I

As you will probably take a great deal of crap in this newsgroup if you continue to post messages that you don't sign and that are posted under the name of 'Cookie Monster'. Especially when you show up and start criticizing things that you obviously don't understand.

>was told that there was nothing but trash on cb and that the hams and ham
>bands were much more civil. Well I got my tech last Saturday and I was
>really excited. I have been looking for all of the ham stuff on the web
>I can. Tonight I found this thread. Sounds like channel 19 to me.

Congratulations on your new ham ticket. You should be excited and we are happy for you. But you are venting your excitiment in the wrong direction. Time for your first ham lesson, maybe. This is NOT ham radio. This is usenet, a part of internet. Ham radio entails the use of RADIO equipment. Maybe that's why they named it ham 'radio' instead of 'ham computer' or 'ham internet'. If you are interested in ham radio, as you must be, I would suggest you go get a radio and talk to other people on the radio. If you are REALLY interested in ham radio, I would suggest you go get an HF radio and talk to other people in othere countries on the HF radio. On HF is where you find the real 'ham bands'. You didn't find the 'ham bands' when you found this thread, or any of the other threads in this newsgroup.

Whomever told you that there was 'nothing but trash on CB' didn't tell you the truth. I haven't been there myself in many years, but I am sure you will find some perfectly nice, normal people who use CB radios. Whomever told you that hams and the ham bands were 'much more civil' was probably partially correct. In general, I guess, the ham bands are more 'civil' because more people try and operate under a set of guidelines and rules. But hams are people, just like CB'ers. Some hams can be downright uncivil. Keep reading this newsgroup and you will probably agree in a short time.

As I said before Cookie Monster (Christ, I hope that's not your real name, if it is I apoligize for my opening remark), this is usenet. Look in any usenet newsgroup and you will find the same uncivility you find in this one. People come to usenet to argue. People come to usenet to debate. People come to usenet looking for information on a particular subject, and soon realize that to

find it they have to wade thru all the other muck. That's internet, it's not ham radio. Go over to the DX group and ask someone for QSL info, and see how fast you get it. Go to the antenna group and ask for help building or tuning an antenna, and see how fast you get it. Amongst those of us that are here to argue and debate, you will find lots of hams on internet willing to help you.

You are excited. That's great. I, and a lot of other hams, remember how excited we were when we got our first license. As I said we share your excitement. But in order to sustain your excitement and get the most out of your new license, you are going to have to do something other than look around in this newsgroup, find the nastyest thread you can find, liken the participants to what you heard on 'channel 19' and then disappear.

Here's something for you to go look at, Cookie Monster.

http://cpcug.org:80/user/wfeidt/index.html

It's a ham radio website. Hope I typed the address right. Anyway, look around and see if you can find something called a packet cluster. That's something that people use to see who's on HF. Go look at twenty meters and see if you can figure out what countries all the calls listed are in. Maybe that will get you excited. Hopefully more than our little discussion of Fuzzy Rabid's 'bite me' remark does.

And when you go to bed tonite look at the ceiling and say this over in your head about 50 times......

THIS IS NOT HAM RADIO. THIS IS THE INTERNET.

If you need some help with something and you think you can manage to stop comparing us to what you have heard on channel 19, come back and maybe we can help you out. Or then again, maybe we'll just give you some more crap. Cuz after all, this ain't ham radio, this is internet..... you dial the number, you take your chances.

Again, congratulations on your new license. I hope you enjoy ham radio as much in the next 20 years as I have in the last 20.

73, Jim KH2D

>Yeah, I know. I can only "hit" three western states with my lousy
>Standard C-288a 220MHz HT...

No, you can hit three repeaters, not 3 states. Understand the concept of linked repeaters, or repeaters in general. You aren't communicating with anybody or anything but the repeater.

>You need to qualify what you're saying. Here in repeater-rich Southern
>California, an HT will get you connected with about all you'd ever want.

You need to qualify what you're saying. Your HT will get you connected to all you want IF the repeaters are working. If not, it will get you connected 3 blocks up the street.

6615. Ham Radio in Phenomenon

Newsgroup: rec.radio.amateur.misc
Date: 1996-07-31 00:00:00 UTC
From: jmd@pe.net
Message-ID: <4to44f$quj@nntp.pe.net>
Source record: 219991

Just saw Phenomenon - a major character is a ham: WB6QLF (Hows about that for a call?!) Has some nice equipment, and a few QSL's, including A45NZ (I think.) He sends CW, and it is actually what they say it is! Pretty decent shack. Problems:

He calls CQ in a way that is really a broadcast to Diana Ross (he wishes...)

He has no ear for digital transmissions, cuz he calls an FSK/AFSK signal morse code - John Travolta of course can decipher it on the fly, and they respond in CW.

Turns out said signal is super secret gov stuff - so why is it being sent in the middle of the voice section of a ham band?

Nevertheless, fairly favorable treatment for our hobby.

If you check news.groups, you'll find that the RFD is in progress.

We'll be sure the word gets out, when it's time to vote.

^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^^

I always thought repeaters operated on the tops of tall buildings and hills.
(Read to the tune of Superman) Look, on top that building! Its a channel! its a
frequency! No its a 2 meter repeater!!!

(complain mode on)

Though I frequently disagree with Burt's point of view (not to mention his presentation) I think he has a *very* valid pet peeve here. The art of conversation in Ham Radio is not only dead, it has mutated to pointlessness. I miss the old days of the Rag Chewer's Club. I miss the variety of conversation. The bands are filled with inane and "hi-bye" contacts which last for over an hour.

All this capability for talking around the world --and they can't think of a damned thing to say. That's pathetic.

I'm with you on this one Burt! How can we keep ham radio attractive when the only thing you hear about besides radio talk is some old geezer complaining about the surgery he had over a year ago.

: This, of course, leads to whether or not it's legal to set up a
: CB *repeater*... though I'm guessing that it's not. Anyone know why?

No, it is not. It will take you only a couple minutes
to read Part 95. A couple of years ago, some yahoos
here put up a CB station plus linear amplifier at our
local repeater site. Audio came from a two meter
receiver parked on some obscure frequency. Don't
recall if it was VOXed or CORed, but when the FM
receiver because active, a relay would key the CB.
It worked like gangbusters, but some of the old-timers
didn't find it too amusing, so down it came...

Cheers -- Mark

6624. DF gear for a repeater (was VORTAC, RADAR)

Newsgroup: rec.radio.amateur.misc

You know, this isn't as bad as it sounds. I've seen DF gear for marine use. A little indicator lights up to show you what relative bearing the signal's coming from. One could build something like that at each receiver site. You could latch it and then shoot that information back when it gets polled by the repeater. Nah, too complicated...
